# CERAMIC ABSTRACTS

## November–December, 1994

Compiled by the American Ceramic Society

## SUBJECT INDEX FOR 1994

The abstract number appears at the end of each citation. Abstracts are numbered continuously through an entire volume. Subject entries are not in strict alphabetical order. Entries were computer sorted and numbers and capital letters appear before lower case letters.

**ablation,**
Ablated flux characteristics during pulsed laser ablation deposition of multicomponent oxides.—73-12907
Flux-creep-flow crossover in laser ablation YBCO thin film.—73-04726
Laser ablation deposition of $YBa_2Cu_3O_{7-x}$ thin films using a microwave plasma disk reactor oxygen source.—73-11814
**abrasion resistance,**
Abrasion-resistant coatings for glass articles.—73-00724
Abrasive wear resistance of transformation-toughened ceramics.—73-09541
Aluminum-oxide-based sintered object and process for producing the same.—73-12339
Comparison of abrasion model test results and machining tests with PVD-coated indexable inserts.—73-06758
Testing abrasive wear in mineral comminution.—73-01833
**abrasion,**
Abrasion testing of glass-ceramics.—73-00432
Abrasive wear rates of certain ceramics and cermets relative to their microhardness and fracture toughness.—73-09540
High-temperature abrasion of refractories.—73-00820
Wear tester capable of monitoring and evaluating the movement pattern of abrasive particles in three-body abrasion.—73-15760
**abrasives,**
Abrasive compact of cubic boron nitride and method of making [the] same.—73-09768
Abrasive grain and manufacture for the same.—73-09769
Abrasive grain size and glass surface finish.—73-00584
Accelerated wear testing using the grit size effect.—73-05016
Brush with success.—73-03414
Garnet, industrial.—73-12274
Glass-bonded ceramic composites.—73-03417
Glass-ceramic bonded abrasive articles.—73-13658
Granular abrasive material.—73-03418
Influence of the mass flux and impact angle of the abrasive on the erosion resistance of materials used in pulverized fuel blends and other components in thermal power stations.—73-09622
Magnetic abrasive finishing of WC-Co curved surfaces.—73-05907
Manufacturing of ferrite-base abrasives for magnetic-electrolytic polishing and its finishing characteristics.—73-06608
Method for producing monocrystalline alumina grains.—73-03419
Method of producing a composite diamond abrasive compact.—73-00002
Model for three-body abrasion of brittle materials.—73-07052
Modelization of damage by abrasion.—73-09654
Multilayer metal-coated diamond abrasives for sintered metal-bonded tools.—73-03697
Multilayer metal-coated diamond abrasives with an electrolessly deposited metal layer.—73-00003
Polishing material.—73-09772
Polycrystalline sintered abrasive granules based on $\alpha$-$Al_2O_3$.—73-03420
Preparation of nonoxidizing abrasive by sol-gel method.—73-09767
Process for making coated abrasives for grinding wheels.—73-09773
Role of indentation fracture in free abrasive machining of ceramics.—73-06514
Sintered microcrystalline ceramic material.—73-09774
Sintered sol-gel alumina abrasive filaments.—73-00005
Superabrasive wheels in the toolroom.—73-15973
Use of surfactants in processing abrasive pigments.—73-12100
**absorption/absorbents,**
Absorption by bound and free excitons in $ZnP_2$-$D_4^8$.—73-07374
Absorption characteristics of Pr(III) and Tm(III) in germanium-based oxide glass.—73-03773
Absorption edge singularities in highly excited semiconductors.—73-07375
Absorption of ir radiation by an electron plasma in the case of scattering by impurities and plasmon-phonon excitations in semiconductors.—73-14765
Behavior of the absorption coefficient due to valence band transitions in CdTe in the temperature range of 5–400 K.—73-14784
Effect of storage conditions on handling and $SO_2$ reactivity of $Ca(OH)_2$-based sorbents.—73-00078
Effects of uv light on ir absorption in chemically vapor deposited a-$SiN_x$:H films.—73-05552
Electron-phonon mechanism of broadening of optical absorption bands of quasi-zero-dimensional crystals.—73-07495
FTIR spectra of ethylene molecularly adsorbed on metal oxides.—73-12590
Fundamental absorption edge of crystalline and amorphous $SiO_2$.—73-16159
Influence of heat-treatment temperature on microwave absorbing properties of Ni-Zn ferrite.—73-04616
Nonresonant microwave absorption in granulated superconductors.—73-01617
Permittivity adjustment and impedance matching of ferrite composite microwave absorber.—73-04634
Photoinduced short-lived optical absorption in quartz glass.—73-00528
Photoinduced transient optical absorption in vitreous silica.—73-00529
Simultaneous recording of absorption and photorefractive gratings in photorefractive crystals.—73-08967
Two-photon absorption of semiconductor microcrystals under space limitation.—73-15221
Ultraviolet absorbing glasses.—73-10669
Uv-induced 210-nm absorption band in fused silica with different thermal history and stoichiometry.—73-07098
Zeolite-containing adsorptive composition and adsorptive decomposition composition containing such zeolite-containing composition.—73-02079
**acceptor,**
Optical method for evaluation of the net acceptor concentration in *p*-type ZnSe.—73-07704
**acids,**
Acid/base properties of oxide, oxide glass, and glass-ceramic surfaces.—73-02549
Chemomechanical effects of boric acid in core drilling of alumina.—73-05706
Corrosion of silicon nitride ceramics by nitric acid.—73-06306
Determination of the concentration of etching solution components containing nitric and hydrofluoric acids.—73-00947
Effect of electrolyte exposure on silicon dioxide in electrolyte-oxide-semiconductor structures.—73-14694
Extraction of alumina from Egyptian kaolin ore with sulfuric and hydrochloric acids.—73-12270
Formation and dissolution behavior of $ZrO_2$ film in $H_3PO_4$ acid solutions.—73-10231
Interaction between $\alpha$-alumina surface and polyacrylic acid.—73-12820
Methylbutenol: a new and simple diagnostic tool for acidic and basic sites of solids.—73-01915
Protonic conductivity of silicotungstic, phosphotungstic, and phosphomolybdic heteropolyacids adsorbed by porous glass.—73-14263
Solid superacids: the alumina–$ZrCl_4$ system.—73-12684
Stability and processing of aqueous $BaTiO_3$ suspension with polyacrylic acid [PAA]: effect of pH.—73-03026
Structural study of peroxopolytungstic acid prepared from metallic tungsten and [aqueous] hydrogen peroxide.—73-02454
**acoustic emission,**
Acoustic emission [AE] amplitude analysis in crack growth studies during thermal shock of ceramics.—73-05527
Acoustic emission [AE] study of $Si_3N_4$.—73-05351
Acoustic emission characteristics of mortar under compression.—73-09803
Acoustic emission in $BaTiO_3$-type ferroelectric crystals in phase transition region.—73-15247
Acoustic shear wave propagation in paratellurite with reduced spreading.—73-08801
Nondestructive detection of acoustic emission for ceramics.—73-15825
On-line wear monitoring using acoustic emission.—73-08428
Properties of AE signal on machining with a surface grinder in glass and new ceramics.—73-02983
Properties of AE signal on machining with a surface grinder in glass and new ceramics.—73-13221
**activation energy,**
Activating the sintering process of the ceramic bodies based on loess-like loamy clays.—73-00585
Activation barriers for dc conductivity in ionic glasses: classical calculations using the small-cluster approximation.—73-04055
**activation,**
Activation of blast-furnace slag in cement without clinker.—73-06621
Activation of ground blast-furnace slag by alkali-metal and alkaline-earth hydroxides—comment.—73-08545
Activation of ground blast-furnace slag by alkali-metal and alkaline-earth hydroxides—reply.—73-08546
Activators for accelerated calcination.—73-09804
Chemical activating of metallurgical slag in the conditions of granulating.—73-06637
Electronic properties of activated carbon fibers.—73-12796
Luminescence of europium-activated quartz glass irradiated with protons.—73-00510
Mechanoactivation of portland cement raw mixes.—73-10041
Mechanochemical activation of high-alumina cements [HAC]: I, Hydration behavior.—73-00137
Morphology and microstructure of activated Indian fly ash.—73-15907
Neutron activation of bird bowls and related archaic ceramics from Miletus.—73-06617
Optimal operating conditions of MgO thermo- and mechanochemical activation.—73-16887
Pozzolanic activation of metakaolin.—73-10089
Surface-activated bonding [SAB]—an approach to joining at room temperature.—73-03648
Toluene disproportionation over ZSM-5 zeolite: effects of crystal size, silicon-to-aluminum ratio, activation method, and pelletization.—73-03065
Tribochemical activation of polycrystalline alumina and zirconia in aqueous suspensions.—73-03066
**actuator,**
Applications of piezoelectrics in smart actuators.—73-04538
Laminated-type piezoelectric actuator.—73-04579
Metal-electroactive ceramic composite actuators.—73-11633
Method for encapsulating a ceramic device for embedding in composite structures.—73-11634
Miniature actuator.—73-11635
Piezoelectric actuator connected to flexible cables.—73-01444
Rainbow ceramics—a new type of ultra-high-displacement actuator.—73-04569
Rolling friction in a linear microactuator.—73-05632

Smart ceramic materials and systems.—73-09749
Testing apparatus for a multilayer piezoelectric actuator.—73-11643

**additives,**
Anomalous microstructure in $Si_3N_4$ ceramics with $Al_2O_3$-$Y_2O_3$-AlN additives.—73-17108
Cement cake properties in static filtration—influence of polymeric additives on cement filter cake permeability.—73-00031
Cement with interground additives—capabilities and environmental relief: I.—73-09840
Cement with interground additives—capabilities and environmental relief: II.—73-09841
Chemical products and additives for isostatic pressing.—73-10806
Coating additives for improved mechanical reliability of optical fiber.—73-03778
Complex additive-retarder of cement setting mortars.—73-00047
Concrete solutions.—73-03446
Correlation of slip property with additives.—73-08330
Densification process of pottery body for building construction: III, Influence of minor additives on the densification of pottery body.—73-00904
Development of the Minimum Additive Waste Stabilization (MAWS) program for Fernald.—73-09712
Dielectric properties in the $Pb(Fe_{1/2}Nb_{1/2})O_3$-$Pb(Fe_{2/3}W_{1/3})O_3$ system modified with $MnO_2$.—73-02571
Distribution analysis of sinter additives in ceramic powders using scanning electron microscopy and quantitative image analysis.—73-09073
Effect of *d*-elements on the spectroscopic characteristics of thin films.—73-02574
Effect of a small amount of liquid-forming additives on the microstructure of $Al_2O_3$ ceramics.—73-16721
Effect of addition of divalent metal oxides on the crystallization, thermal expansion, and surface roughness of alkali-free porcelain enamel in the MgO-$ZrO_2$-$P_2O_5$-$SiO_2$-$B_2O_3$ system.—73-13823
Effect of additives on the electrostatic force of alumina electrostatic chucks.—73-02779
Effect of additives on the electrostatic force of alumina electrostatic chunks.—73-10934
Effect of additives on the strength characteristics of MDF cement composites.—73-09896
Effect of andalusite, sillimanite, and kyanite on phase composition and thermal shock resistance of refractories.—73-03999
Effect of CaO addition on crystallization processes of $Li_2O$-$Al_2O_3$-$SiO_2$-$TiO_2$ glasses.—73-03721
Effect of combined additions of silica fume, calcium sulfoaluminate, and gypsum on the hydration and strength development of $Ca_2SiO_4$.—73-09900
Effect of polyacrylic hydrazide addition on properties of compact molded gypsum.—73-09914
Effect of $SiO_2$ and $TiO_2$ on the sinterability and microstructure of alumina ceramics.—73-16741
Effect of various oxide additives on sintering of BaO-$SiO_2$ system glass-ceramics.—73-03836
Effects of α-SiC versus ß-SiC starting powders on microstructure and fracture toughness of SiC sintered with $Al_2O_3$-$Y_2O_3$ additives.—73-13024
Effects of additives on magnesia alumina spinel bricks.—73-07208
Effects of additives on properties of basic refractories.—73-10724
Effects of additives on the bending strength and heat shock resistance of sintered bodies of stabilized aluminum titanate.—73-13514
Effects of additives on the stacking fault annihilation in ß-SiC powder compacts.—73-02246
Effects of Al, Si, and $B_4C$ additives on oxidation resistance of $Al_2O_3$-C refractories.—73-07209
Effects of $Li_2O$ and $Na_2O$ addition on growth and electrical properties of $PbTiO_3$ single crystals.—73-00954
Effects of $Li_2O$ and $Na_2O$ addition on growth and electrical properties of $PbTiO_3$ single crystals.—73-12778
Effects of SiC addition on the mechanical properties and sinterability of $TiB_2$-(2 mol% $Y_2O_3$-$ZrO_2$) composite.—73-02807
Effects of ultrafine $SiO_2$, $Al_2O_3$, and $Cr_2O_3$ powders on character of ultralow cement corundum castables.—73-10726
Estimation of properties and results of utilization of a new type of cement SG-45.—73-00084
Ferroelectric aluminotitanobarium materials with modifying additives.—73-01411
Gas-pressure sintering of ß-silicon nitride containing $Y_2O_3$ and $Nd_2O_3$.—73-02838
Glaze additives—30 years ago and today.—73-00909
High-$T_c$ superconducting glass-ceramics prepared by melt-quenching methods in the bismuthate system with additives.—73-15499
High-performance of new ST-type $Si_3N_4$ ceramic inserts with nonoxide additives.—73-08532
High-temperature properties of $Sc_2O_3$-doped $Si_3N_4$.—73-03308
Homogeneous mixing of $Si_3N_4$ with sintering additives by coprecipitation method.—73-16820
Improving the microstructural and physical properties of alumina electrical porcelain with $Cr_2O_3$, $MnO_2$, and ZnO additives.—73-16833
Influence of additives on the expansive stress of quicklime.—73-00110
Influence of different addition on portland cement hydration heat.—73-03485
Interaction of structure and properties of sulfoferritic and sulfoaluminoferritic clinker melts.—73-13744
Intergranular microstructure and oxidation behavior of $Si_3N_4$ ceramics formed with $Y_2O_3$, $Al_2O_3$, and $ZrO_2$.—73-06239
Internal friction and anelastic relaxation of $ZrO_2$ polycrystals containing 2 mol% $Y_2O_3$, 8 mol% $Y_2O_3$, and 12 mol% $CeO_2$.—73-02304
Mechanical properties of HIPed $Si_3N_4$-based materials for high-temperature long-term applications.—73-09638
Mechanical properties of hot-pressed TiN ceramics with various additives.—73-06480
Mechanical properties of hot-pressed TiN ceramics with various additives.—73-17386
Microstructural control of LAS ceramics: II, Influence of $Li_2O$-$4B_2O_3$ *frit addition on the microstructure and thermal expansion of* ß-spodumene.—73-03163
Microstructural control of LAS ceramics: III, Influence of $Li_2O$-$4B_2O_3$ *frit addition on the microstructure and thermal expansion of* ß-spodumene made from kaolinite.—73-06248
Modification of ferrite products using additives derived from aqueous salt solutions.—73-01474
Nonthermal granulation—the effect of additives on granulates and pressed bodies.—73-01805
Oxidation behavior of RE-α-SiAlON ceramics (RE=Nd, Sm, Gd, Dy, Y, Ho, Er, Yb).—73-17228
Physicochemical properties of ferrite powder modified by iron hydroxide.—73-05948
Polysaccharide-based additives in plaster binders.—73-10084
Processing, microstructure, and wear behavior of silicon nitride hot-pressed with alumina and yttria.—73-09501
Production and the properties of low-heat cement using dephosphorized slag.—73-10101
Properties of gypsum-free portland cements with an admixture of ABESON-TEA grinding aid.—73-10111
Resource-saving effect of concrete modifiers.—73-00185
Role of external additives on the surface crystallization of multicomponent nonalkali glasses.—73-00396
Silicon nitride ceramics.—73-16986
Sintering of alumina green sheet with $TiO_2$ and $Cr_2O_3$ in reducing atmosphere.—73-06057
Slip casting of silicon nitride and mechanical properties of sintered body: IV, Compositions of [$Al_2O_3$-$Y_2O_3$] sintering additives and sintering conditions.—73-17002
Slip casting of silicon nitride and mechanical properties of sintered body: IV, Compositions of sintering additives and sintering conditions.—73-09335
Stabilization of perovskite phase and enhanced DPT [diffuse phase transition] characteristics of $Pb(Zn, Mg)_{1/3}Nb_{2/3})O_3$-$PbTiO_3$ ceramics by the addition of excess constituent oxides.—73-16315
Stabilized zirconias prepared by mechanical alloying.—73-03029
Synthesis of AlN powder by carbothermal reduction–nitridation method: effect of additives on reaction rate.—73-06088
Synthesis of $Ba_2Ti_9O_{20}$ by coprecipitation process and the effect of $ZrO_2$ addition.—73-17033
Temperature characteristics of (Pb,Sr,Ba)[(Zr, Ti)(Mn, Sb)]$O_3$ piezoceramics.—73-15292
Tribochemical mechanisms of $Si_3N_4$ with additives.—73-09519
Unexpected effects of alkali hydroxide added to cement mix water.—73-03550
Use of ferrophosphorus [FP] as a heavyweight additive for API oil well cements.—73-06731

**adhesives/adhesion,**
Adherence of enamel to steel.—73-03562
Adhesion of glass to metals as a production problem.—73-14314
Adhesion testing of glass-ceramic thick films on metal substrates.—73-06736
Ceramic adhesive composition and use thereof.—73-04028
Effect of annealing the polymer on the adhesion between carbon fibers and a thermoplastic matrix.—73-03577
Effect on lacquer adhesion of solid-state properties of tin oxides.—73-05549
First-principles study of interfacial adhesion: the Mo/$MoSi_2$ interface with and without impurities.—73-00233
Influence of polymer modifications on the adhesion of cement pastes to aggregates.—73-00121
Metal-ceramic adhesion: quantum mechanical modeling of transition metal–$Al_2O_3$ interfaces.—73-06824
Microindentation adhesion tester and its application to thin films.—73-08416
Sticking coefficient variation during condensation of silver and gold on MgO film.—73-13901
Thermally conducting adhesive containing aluminum nitride.—73-12530
Time-dependent adhesion between glass surfaces in dilute surfactant solutions.—73-06982

**admixture,**
Effects on cement paste of treatment with an extended set control admixture.—73-00082
Extract from endod (Phytolacea dodecandra), a soap berry plant, in the making of concrete.—73-00089
Put to the test.—73-00175

**adsorption/adsorbents,**
Absorption of MFI-type zeolites examined by isothermal microcalorimetry and neutron diffraction: I, Argon, krypton, and methane.—73-08798
Adsorbent with $Li^+$ ion-memory effect.—73-16404
Adsorption by MFI-type zeolites examined by isothermal microcalorimetry and neutron diffraction: II, Nitrogen and carbon monoxide.—73-08804
Adsorption in pores with heterogeneous surfaces.—73-16405
Adsorption of $CO_2$ on nonstoichiometric strontium calcium HAp.—73-12743
Adsorption of $CO_2$ on oxygen-deficient magnetite: adsorption enthalpy and adsorption isotherm.—73-16028
Adsorption of dextrin onto graphite.—73-08805
Adsorption of H, $CH_3$, $CH_2$, and $C_2H_2$ on 2×*1 restructured diamond (100)—theoretical study of structures, bonding, and migration.—73-02142*
Adsorption of perfluoropolyethers on $SiO_2$ surfaces for thin-film magnetic disk overcoats.—73-06883
Adsorption of phosphate on vaterite.—73-05352
Adsorption on fractal structures: applications to cement materials.—73-13673
Adsorption properties of local diatomites.—73-12253
Alumina-based adsorbents for the purification of polyolefins.—73-12338
Benzene adsorption on silica, modified by chromium oxochloride.—73-16414
Calorimetric studies of the surface aggregation of adsorbed molecules in ionic surfactant adsorption onto the heterogeneous oxide surfaces.—73-16418
Ceramics for adsorption and separation of virus and cells.—73-05161
Characterization by physisorption of a new class of microporous adsorbents: pillared clays.—73-16419
Coadsorption of $Mo^{VI}$ species and $Co^{II}$ ions on the surface of γ-alumina.—73-08822
Comparative study of $SO_2$ adsorption on metal oxides.—73-16057
Computer simultion of the adsorption of fluid mixture in zeolite Y.—73-12759
Dynamic adsorption on inorganic membranes.—73-16452
FTIR study of $CO_2$ adsorption on nonstoichiometric Sr-HAp.—73-16158
Heats of hydrocarbon and water adsorption by high-silicon zeolites of ZSM-5 type.—73-16164
In situ surface vibrational spectroscopy of the vapor/solid and liquid/solid interfaces of acetonitrile on $ZrO_2$.—73-09464
Interface chemistry of powders—adsorption, wetting, and dispersion.—73-16522
Microstructural implications by studying water vapor adsorption.—73-03164
Molecular adsorption on silica gel surface from liquid mixtures.—73-16545
Molecular sieve surface-layer adsorbents for gas chromatography—review.—73-12166
Sorption kinetics of $SO_2$ from combustion flue gases at low temperatures.—73-00191
Use of base-treated inorganic porous adsorbents for removal of contaminants.—73-05248

**advanced ceramics,**
*R*-curve behavior and its effect on strength for advanced ceramics.—73-06505
Advanced ceramics as cutting tool materials: I, An overview.—73-12312
Advanced ceramics as cutting tool materials: II, State of the art and developments.—73-12313
Advanced ceramics in The Netherlands.—73-06554
Advanced ceramics—an overview.—73-05153
Advanced ceramics: international trends.—73-03377
Advanced structural and functional ceramics.—73-05257
Advances in Science and Technology, 2: Innovative Materials, Prospects and Problems in a Competitive Industrial Context (Proceedings of the International Conference on "Innovative Materials—Prospects and Problems in a Competitive Industrial Context," June 4-6, 1992, Modena, Italy)—73-17515
Application of advanced ceramics for industrial machines and its problem.—73-02002
Barriers to applying advanced high-temperature materials.—73-09700
Canadian advanced ceramic developments.—73-06559
Case for strategic partners in a high-tech industry.—73-09701
Ceramic activities in Vamas [Versailles Project on Advanced Materials and Standards].—73-06560
Ceramic wear materials—horses for courses.—73-05160
Compressive testing of ceramics.—73-08385
Current U.S. markets for advanced ceramics and projection of future growth.—73-09708
Development of ceramic high-performance materials: I, State of the art and research.—73-12324
Development of ceramic high-performance materials: II, Technical actuality—market introduction.—73-12325
Development trends in advanced ceramics.—73-02009
Developments in the synthesis of advanced ceramic powders.—73-16707
Electrical discharge machining of advanced ceramics.—73-04914
Enrichment of aluminum hydroxides and oxides for the advanced ceramics.—73-08513
Evolution of mechanical seals by the use of advanced ceramics as tribomaterial.—73-02012
Excimer lasers and their treatment of advanced ceramic materials.—73-04919
Extrusion machines for plastic forming of ceramic bodies.—73-01781
Fine ceramics in Japan.—73-05168
Fracture toughness of advanced ceramics at room temperature.—73-17334
Grinding advanced ceramics.—73-15728
High-efficiency grinding of structural ceramics.—73-05840
High-performance/high-temperature materials in Japan.—73-17486
Influence of Japanese/American culture on technological innovation in advanced ceramic materials.—73-03397
Japan's usage of metal alkoxides in advanced ceramics.—73-03400
Know when to use "advanced" materials.—73-15928
Life Prediction Methodologies and Data for Ceramic Materials (ASTM Special Technical Publication 1201).—73-17531
Methodology to predict creep life for advanced ceramics using continuum damage mechanics.—73-17396
Neutron radiography for $Si_3N_4$ fine ceramics.—73-12171
New hardness standard reference materials (SRM's) for advanced ceramics.—73-15824

New test methods for engineering ceramics—in situ microscopy investigation.—73-01920
Ongoing example of advanced ceramics development.—73-12438
Opportunities for advanced materials used in power transmission.—73-12328
Pitch-based advanced carbon materials—resourceful utilization technologies of pitch.—73-12439
Polyethylene glycol [PEG] binders for advanced ceramics.—73-09247
Processing and applications of advanced ceramics.—73-05178
Production-oriented, nondestructive testing of structural advanced ceramics: I, Ultrasonic testing.—73-12182
Selection and application of wear-resistant materials to increase service life of components.—73-08541
Superplasticity in advanced materials.—73-16606
Synergistic effects of coupled combustion synthesis and vapor phase transport in the synthesis of advanced materials.—73-06076
Thermal Shock and Thermal Fatigue Behavior of Advanced Ceramics (NATO Advanced Science Institutes Series E: Applied Sciences 241).—73-17540
Trends in the research of advanced ceramics.—73-09754
U.S. advanced ceramics industry: the growth continues.—73-13647
Worldwide advanced ceramics industry outlook for the '90s.—73-17514

**aerogel,**
Aerocapacitor: an electrochemical double-layer energy storage device.—73-07282
Effect of gel parameters on monolithicity and density of silica aerogels.—73-09078
Evolution of mechanical properties during the alcogel-aerogel-glass process.—73-10440
Hydrophobic silica $CO_2$ aerogels.—73-00641
Preparation and physical properties of $V_2O_5$ aerogel.—73-13176
Structural and mechanical evolution during the aerogel-glass process.—73-14503
Structure and physical properties of $V_2O_5$ aerogels and xerogels.—73-14285
Synthesis and characterization of pure and yttrium-containing alumina aerogels.—73-06079
Ultrasonic evaluation of elastic properties of silica aerogels.—73-12904

**agglomerates,**
Characterization techniques for agglomerate structures.—73-08380
Die pressing test for the estimation of agglomerate strength.—73-05039
Particle agglomerate effect on intermediate/final microstructure.—73-13436
Process for the preparation of alumina agglomerates.—73-02064

**agglomeration/agglomerates,**
Agglomeration property of SiC powders prepared from fine $SiO_2$-C mixed powders.—73-02724
Process for producing agglomerates from dusts.—73-12398

**aggregates,**
Aggregate particles produced during pyrolysis of PTC barium titanate precursor synthesized by the oxalate method.—73-17107
Alkali reactivity of greywacke aggregates in Maentwrog Dam (North Wales).—73-13674
Alkali-silica reaction mechanism of aggregates showing different mortar bar expansion behaviors.—73-09812
All you want to know about lightweight aggregate concrete.—73-09813
Application of the NBRI accelerated mortar bar tests to siliceous carbonate aggregates produced in the St. Lawrence Lowlands (Quebec, Canada): II, Proposed limits, rates of expansion, and microstructure of reaction products.—73-00024
Applications of the NBRI accelerated mortar bar test to siliceous carbonate aggregates produced in the St. Lawrence Lowlands (Quebec, Canada): I, Influence of various parameters on the test results.—73-00025
Are small aggregates really better for making high-strength concrete.—73-06627
Chemical identification of portland cements in New Zealand concretes: II, The Ca-Sr-Mn plot in cement identification and the effect of aggregates.—73-06638
Controllability of expansion of lightweight aggregates with natural zeolites on firing.—73-09870
Critical evaluation of accelerated test methods for detecting the alkali reactivity of aggregates.—73-12123
Crystal growth diagrams as an aid to interpreting the fabrics of calcite aggregates.—73-12558
Effect of aggregate size on transition zone properties at the portland cement paste interface.—73-00070
Effect of treatment of reactive aggregate by $H_2O_2$ on the alkali-silica reaction [ASR].—73-12134
Effects of transition zone microstructure on bond strength of aggregate–portland cement paste interfaces.—73-03461
Flat aggregate–portland cement paste interfaces: I, Electrical conductivity models.—73-00092
Flat aggregate–portland cement paste interfaces: II, Transition zone formation.—73-00093
Influence of polymer modification on the adhesion of cement pastes to aggregates.—73-00119
Influence of polymer modifications on the adhesion of cement pastes to aggregates.—73-00121
Instant-chilled steel slag aggregate in concrete—strength-related properties.—73-00127
Insulating refractory.—73-04032
Interface between polymer-modified cement paste and aggregate.—73-00128
Manufacture of sintered fly ash aggregate using sludge.—73-08497
Method for determining saturated surface dry state of fine aggregate.—73-10043
Method for making lightweight ceramic particles.—73-05149
New method of enhancing cement-aggregate interfaces: I, Ideal aggregate and its effects on interfacial microstructures.—73-10066
Peculiarities of destruction of lightweight concretes of class B15 on mixed fine aggregate.—73-00159
Penetration of cement paste into lightweight aggregate.—73-03514
Properties of high-strength concrete containing light-, normal-, and heavyweight aggregate.—73-06704
Quality of concrete incorporated with two types of ferronickel slag fine aggregates.—73-10119
Sludge ash pellets as coarse aggregates in concrete.—73-06717
Synthesis and characterization of crystalline analogs of alkali-aggregate reaction products.—73-03543
Use of superplasticizers in palm kernel shell aggregate concrete.—73-00203

**aging,**
Influence of the age of concrete on the strength and rigidity of beams.—73-00125
Mechanisms of $YBa_2Cu_3O_{7-y}$ stability enhancement.—73-15553
Monoclinic-to-tetragonal transformation and crack healing by annealing in aged 2Y-TZP ceramics.—73-17176
New technique for monitoring aging in yttria–tetragonal zirconia polycrystals.—73-01919

**air,**
Air classification on an inclined moving grid.—73-01761
Air compressors for the process industries.—73-04899
Application of air as thermal insulating material to kilns.—73-15865
Exhaust/preheat/hot zone air-flow considerations.—73-01949
Is your air power fit to face the competition.—73-04926
Time is now: planning for the Clean Air Act (CAA).—73-09752

**albite,**
Albite-based fine household porcelain.—73-07232
Low-temperature transparent green stock glaze using albite and lipidolite.—73-10864
Pinholes and introduction of albite in double-firing zircon-glazed tiles.—73-10881

**alcohol,**
Alcohol sensor by using a *p-n* semiconductor contact.—73-11063
Etherification of silanol groups of silica surface under interaction with tert-butanol.—73-16142
Preparation and characterization of silica-supported maghemite.—73-02933

**alignment,**
Choice of optimum methodology and procedure for the correct alignment of rotary kilns and parameters influencing such a choice.—73-00040

**alinite,**
Alinite cement, a hydraulic cementitious material made of incinerator wastes.—73-09810
Preparation and hydration study of alinite cement.—73-00169

**alite,**
Characteristics of hydrated alite in hardened cement body.—73-00034
Characteristics of hydrated alite in hardened cement body.—73-09847
Decomposition of alite in portland cement clinker.—73-09880
Heat of hydration and strength development of alite–belite–blast-furnace slag composite.—73-09980
Heat of hydration and strength development of alite–belite–blast-furnace slag composite.—73-09981
Hydration of alite at different pH's.—73-09986
Influence of firing conditions and minor components on the fine textures of alite.—73-10007
Phase composition formation of portland cement clinker and alite formation kinetics.—73-10079
Relationship between zonal structure in alite, lamellar texture in belite, and their production process, composition, and crystal structure.—73-10137
Role of mineralizers in alite formation in a rice husk ash–$CaCO_3$ raw mix.—73-10143

**alkali resistance,**
Critical evaluation of accelerated test methods for detecting the alkali reactivity of aggregates.—73-12123

**alkali-silica reaction,**
$^{29}$Si MAS [magic angle spinning] NMR spectroscopic investigation of alkali-silica [AS] reaction product gels.—73-06967
Alkali reactivity of deformed granitic rocks: a case study.—73-15896
Alkali reactivity of greywacke aggregates in Maentwrog Dam (North Wales).—73-13674
Alkali-aggregate reaction rim: $Na_2O$, $SiO_2$, $K_2O$, and CaO chemical distribution.—73-00020
Alkali-silica reaction [ASR]: VIII, Correlation between mortar-bar expansion and Δ values.—73-00021
Alkali-silica reaction in a monolithic opal.—73-13676
Alkali-silica reaction mechanism of aggregates showing different mortar bar expansion behaviors.—73-09812
Analyses of sodium- and potassium-rich droplets observed on the surface of alkali-silica reactive aggregates and on gel in polished thin sections.—73-09814
Applications of the NBRI accelerated mortar bar test to siliceous carbonate aggregates produced in the St. Lawrence Lowlands (Quebec, Canada): I, Influence of various parameters on the test results.—73-00025
Comparison of different methods of detection of alkali-silica reactivity of aggregates.—73-05029
Detection of ASR [alkali silica reaction] in opened fractures of damaged concrete.—73-09882
Determination of the essential role of $OH^-$ ions in alkali-silica reaction.—73-13703
Effect of treatment of reactive aggregate by $H_2O_2$ on the alkali-silica reaction [ASR].—73-12134
Effects of silica fume on alkali-silica expansion in mortar specimens.—73-03460
Improved control of alkali-silica reaction by combined use of admixtures.—73-06672
Influence of lime on the reaction between alkalis and aluminosilicate aggregates.—73-00116
Mechanism of alkali-silica reaction and the significance of calcium hydroxide.—73-00136
Simultaneous presence of alkali-silica gel and ettringite in concrete.—73-06715
Specific effect of ions on the rate of alkali-silica reaction.—73-10161
Thermodynamic and kinetic approach to the alkali-silica reaction: II, Experiment.—73-08777
Use of dynamic nondestructive test methods to monitor concrete deterioration due to alkali-silica reaction.—73-10185

**alkaline earths,**
Effect of disubstituted oxides of alkaline earth metals on opacified glazes.—73-07247
Electrical conductivity measurements of binary solutions of molten alkaline-earth fluorides.—73-00957
Luminescence of ytterbium(II) in alkaline-earth fluorohalides.—73-02633
Preparation and structures of the alkaline-earth iron oxyhalides.—73-02403
Structural influence of nitrogen in alkaline-earth aluminosilicate glasses: ir absorption spectroscopy.—73-10404

**alkalis,**
Ac complex impedance, dc resistivity, $^7$Li and $^{23}$Na NMR studies of the layered $Li(Na)_2Mo_2O_8$ system.—73-05350
Alkali-activated cementitious systems in China: a review.—73-06623
Alkali-activated ground-granulated blast-furnace slag concrete: preliminary investigation.—73-00018
Alkali-cement system.—73-09811
Alternative model for alkali-borate glass structure.—73-13924
Color center absorption in binary alkali silicate glasses.—73-14145
Composition fluctuation in an alkali silicate glass.—73-06891
Conditions for alkali-borosilicate solution synthesis with europium introduction to manufacture hollow glass microspheres.—73-14342
Connection between the thermal capacity and the structure of alkali borate systems in the glassy, crystalline, and liquid states.—73-00442
Dispersion behavior of alkali-silicate glasses as a function of short-range structural units.—73-00449
Effect of diffusion stresses on the properties of ion-exchanged layers of alkali zirconium silicate glasses.—73-00453
Effect of hydrostatic pressure on screw dislocation annihilation by cross gliding in alkali halide crystals.—73-17123
Elastic modulus, refractive index, and its change during ion exchange in melts of salts for alkali phosphate glasses.—73-14167
Electron spin resonance characterization of nonbridging oxygen-hole centers in alkali silicate glasses.—73-13975
Enthalpy of formation of alkali borosilicate glass.—73-00335
EPR spectra of alkali-metal silicate glasses subjected to ion exchange and γ-irradiation.—73-00336
Further $^{29}$Si MAS NMR study on binary alkali silicate glasses.—73-10378
Grain growth of sintered ZnO with alkali oxide additions.—73-17140
High- and medium-range viscometers and their test with some alkali silicate glasses.—73-01902
Influence of alkali content and alkali mixing on the chemical durability of fluorozirconate glasses.—73-06929
Infrared reflectance investigation of alkali diborate glasses.—73-00351
Interaction of alkali tungsten tellurite glass with aqueous solutions.—73-00355
Internal friction of mixed-alkali aluminogermanate glasses—complexity of mixed-alkali peak.—73-10386
Interrelation of change of heat content and structure of alkali borate systems in vitreous, crystalline, and liquid states.—73-02307
Ionic conductivity of alkali silicate glasses.—73-03795
$L^I(M^{VI})_{2-x}(N^{IV})_x(PO_4)_3$ (L=Li, Na; M, N=Ge, Sn, Ti, Zr, Hf): new solid solutions synthesis, X-ray diffraction analysis, and ionic conductivity.—73-02313
Measures to inhibit alkali-dolomite reaction.—73-13750
Microcharacteristics and properties of hardened alkali-activated cementitious [AAC] materials.—73-10045
Migration of alkali ions in mortar due to several mechanisms.—73-06690
Nature of the linear frequency-dependent alternating current conductivity interpolating between conductivity relaxational and vibrational responses in alkali oxide glasses.—73-03804
Neutron diffraction study of the structure of alkali silicate glasses.—73-03743
Neutron diffraction study of the structure of alkali silicate glasses.—73-14050
Optical spectra of $In^+$ centers in the NaF crystal.—73-02656
Radiation effects on thermal expansion of some ternary alkali silicate glasses.—73-00539
Schottky barrier formation between GaAs(110) and alkali metals.—73-01309
Selection of stimulation agents for alkali-slag cement.—73-13774
Structural relaxations in alkali silicate systems by Brillouin light scattering.—73-00551

Structure and molar volumes of alkali silicate glasses.—73-00414
Structure characteristics of neodymium alkali nitrates.—73-16333
Structure of $B_2O_3$ and alkali borates in vitreous and molten states.—73-14107
Surface-chemical study on stress corrosion of glass in aqueous solutions: II, Influence of alkali metal ions.—73-00419
Synthesis and characterization of crystalline analogs of alkali-aggregate reaction products.—73-03543
Temperature dependence of isostructural viscosity of polyalkali glasses.—73-14517

**alkanes,**
Influence of presorbed molecules on the sorption of *n*-alkanes in zeolite NaCaA.—73-16174

**alkoxide,**
Characterization of hot-pressed silicon nitride ceramics with alkoxide-derived oxide mixtures as the sintering aid.—73-06196
Chemical structure of a complex alkoxide as a precursor of $Pb(Mg_{1/3}Nb_{2/3})O_3$.—73-16054
Interaction of alkali oxide and $SO_3$ on 3CaO·$SiO_2$ *formation and microstructure.—73-13743*
Methanolysis and hydrolysis of magnesium aluminum bimetallic alkoxides.—73-02893
Preparation of seeded alumina from alkoxide: I, Powders.—73-02964
Preparation of seeded alumina from alkoxide: II, Sintering.—73-02965
Processing of ultrafine mullite powder through alkoxide route.—73-03404
Temperature effects on phase composition and properties of aluminum alkoxide hydrolysis products.—73-16361

**alloys,**
Choice of casting alloys for machine elements for equipment in milling and crushing installations.—73-01767
Deformation of A 356-15% $SiC_p$ semisolid alloys during squeezing flow.—73-06765
Hall-Petch relation in nanocrystalline Fe-Mo-Si-B alloys.—73-15496
Improving the technology for making cupelas used in lead-alloy cupellation.—73-00826
Influence of heat treatment on microstructure and tensile properties of GlidCop dispersion-strengthened copper alloy.—73-13846
Process for the preparation of metal carbides.—73-02129
Silicon nitride ceramics—alloy design.—73-06282
Sliding wear of an aluminum-silicon alloy reinforced with nickel-coated carbon fibers.—73-09671

**alumina,**
$K_R$-curve behavior in $Al_2O_3$-Cr ceramic-metal composites.—73-06812
*R*-curve behavior of alumina and PSZ at ambient and high temperatures.—73-06506
*R*-curve properties of alumina measured by stable fracture test in bending.—73-06509
α-$Al_2O_3$ (0001) surfaces: atomic and electronic structures.—73-05349
3-D composite fabrication through matrix slurry pressure infiltration.—73-17059
Abrasive grain and manufacture for the same.—73-09769
Abrasive wear of $Al_2O_3$-SiC composites.—73-03233
Agglomerate characteristics and sintering behavior of alumina powders.—73-12909
$Al_2O_3$ and $ZrO_2$ composites with high-TiC contents fabricated by tailoring oxide powders.—73-09012
$Al_2O_3$ coating on MgO particles.—73-05687
$Al_2O_3$ porous structure and strength.—73-16653
$Al_2O_3$(p)-6061Al composites under dry sliding conditions [studied] using scanning electron microscopy, energy-dispersive spectrometry, and X-ray diffractometry.—73-06737
$Al_2O_3$- and $ZrO_2$-modified dental glass-ceramics.—73-14316
$Al_2O_3$-based ceramic.—73-12337
Alkali metal salts as set accelerators for high-alumina cement.—73-03434
Alkali-free glass.—73-00725
Alumina as a devitrification inhibitor during sintering of borosilicate glass powders—correction.—73-00588
Alumina buildup in submerged entry nozzle.—73-00773
Alumina ceramic-metal articles.—73-03670
Alumina coated with a layer of carbon as an absorbent.—73-05187
Alumina material useful with thin-film heads.—73-05188
Alumina package for hermetically containing an electronic device therein.—73-11000
Alumina slurry.—73-16654
Alumina–chromium carbide composite through an internal synthesis method.—73-02725
Alumina, calcia, yttria sealing composition.—73-13913
Alumina-based adsorbents for the purification of polyolefins.—73-12338
Alumina-spinel castable refractories for steel teeming ladle.—73-14567
Alumina.—73-12254
Alumina/aluminum co-continuous ceramic composite (C4) materials produced by solid/liquid displacement reactions: processing kinetics and microstructures.—73-13797
Alumina/aluminum composites formed by the directed oxidation of aluminum using magnesia as a surface dopant.—73-10197
Alumina/aluminum composites formed by the directed oxidation of aluminum using sodium hydroxide as a surface dopant.—73-10198
Aluminum oxide thin-film deposition by reactive ion plating using the cathode system composed of $LaB_6$ disk and Ta pipe.—73-09013
Aluminum titanate ceramics: I, Influence of $Al_2O_3$ on course of synthesis and on $Al_2TiO_5$ microstructure.—73-05689
Aluminum tungsten oxide ceramics synthesized by a high-power cw $CO_2$ laser.—73-09014
Aluminum-oxide-based sintered object and process for producing the same.—73-12339
Ambient-temperature mechanical response of alumina-fluoromica laminates.—73-13492
Amorphous silica spherical particles.—73-02020
Analysis of the wear behavior of SiC whisker-reinforced alumina from 25° to 1200°C.—73-09544
Analytical electron microscopy [AEM] of $Al_2O_3$ implanted with iron ions.—73-03120
Anisotropic optical spectra of α-$Al_2O_3$ single crystals in the vacuum ultraviolet region: I, Spectra of absorption tail and reflectivity.—73-02551
Anisotropic optical spectra of α-$Al_2O_3$ single crystals in the vacuum ultraviolet region: II, Spectra of optical constants.—73-08809
Apparatus for controlled supply of alumina.—73-15703
Application of microwave heating to combustion synthesis and sintering of $Al_2O_3$-TiC ceramics.—73-05695
ArF excimer laser chemical vapor deposition a-Si:H/a-$Al_2O_{1-x}$ superlattices.—73-12922
Aspects of mullite synthesis in relation to the grain size of $Al_2O_3$ and $SiO_2$.—73-00778
Aspects of the chemical technology of $ZrO_2$-$Y_2O_3$-$Al_2O_3$ powders and testing them in ceramics technology.—73-02729
Bacteria removal by ceramic microfiltration.—73-02021
Bauxite processing.—73-12309
Behavior and test method of subcritical crack growth at elevated temperatures in ceramics.—73-15779
Behavior of alumina particle-reinforced 2618 aluminum.—73-09545
Behavior of basalt fibers in high alumina cement matrix.—73-00028
Behavior of rf sputter-deposited $SiO_2$ and $Al_2O_3$ diffusion barriers on float glass at 300°C in air.—73-10499
Bending strength of SiC/$Al_2O_3$ composite sheet obtained from polycarbosilane/alumina powder/binder mixture.—73-03242
Bi-Sr-Ca-Cu-(Al)-O system; accompanying phases: I.—73-11695
Bioinert $Al_2O_3$ ceramics for medical purposes.—73-05157
Bonding of bodies of refractory hard materials to carbonaceous supports.—73-14634
Bonding strength of alumina joint bonded under the alternating stress.—73-06335
Bonding strength of alumina joint bonded under the alternating stress.—73-13802
Boron nitride-containing bodies and method of making the same.—73-15978
Brinellium—a harder, stronger, and more wettable form of aluminum oxide.—73-15920
Bulk modulus and Young's modulus of nanocrystalline γ-alumina.—73-17242
Burnout of binder and sintering behavior of powder compacts of bimodally distributed alumina powders with stearic acid and polyethylene glycol.—73-02732
Calcium phosphate type glass-ceramic.—73-00727
Calcium sulfoaluminate cements prepared from waterworks slime, a potential alumina resource for the production, and the possibility of lowering firing temperature.—73-09835
Calculated stacking-fault energies in α-$Al_2O_3$.—73-08559
Calculated structures and energies of grain boundaries in α-$Al_2O_3$.—73-05364
Carbon monoxide hydrogenation on cobalt/alumina and cobalt/NaX catalysts.—73-00213
Carboxylic acids as dispersants for alumina slurries.—73-09029
Catalyst carrier.—73-05192
Catalyst for purifying automotive exhaust gas.—73-03673
Catalysts for the high-temperature steam reforming of hydrocarbons.—73-05194
Centrifugal casting of alumina-zirconia mixed powder.—73-16664
Ceramic composite and process for its production.—73-15936
Ceramic composites and process for manufacturing the same.—73-15937
Ceramic compositions for wear-resistant applications.—73-15938
Ceramic green bodies.—73-05200
Ceramic joining: I, Partial transient liquid-phase bonding of alumina via Cu/Pt interlayers.—73-06744
Ceramic products for hydrogen sintering kilns.—73-03993
Ceramic sintered body and process for preparation thereof.—73-02030
Ceramic substrate for sputtered alloy film developed with required as-sintered density for use in construction of video heads.—73-12321
Ceramic whisker-reinforced cutting tool with preformed chipbreakers for machining.—73-02032
Change in pigment color in the system CoO-$Cr_2O_3$-$Al_2O_3$.—73-00899
Change of internal/pore structure in alumina green body during initial sintering.—73-05701
Changes in surface and catalytic properties of the CuO/$Al_2O_3$ system induced by doping with MgO.—73-05535
Changes of microstructure and high-temperature strength of ceramic composite in the mullite-$ZrO_2$-$Al_2O_3$ system using an in situ reaction between synthetic zircon and $Al_2O_3$.—73-17244
Changes of YAP phase content and some properties by the annealing of $Si_3N_4$-$Al_2O_3$-$Y_2O_3$-AlN ceramic.—73-16048
Characteristics of $Al_2O_3$-SiC nanocomposite prepared by sol-gel processing.—73-17113
Characteristics of alumina powders prepared by spray drying of boehmite sol.—73-12937
Characteristics of alumina-supported $TiO_2$ composite ultrafiltration membranes prepared by the sol-gel method.—73-05162
Characterization of cake structure and rheology via pressureless slip casting.—73-09037
Characterization of different conversion coatings on aluminum with spectroscopic ellipsometry.—73-13806
Characterization of dispersions and surface states of NiO/γ-alumina and NiO/$La_2O_3$-γ-alumina catalysts.—73-06141
Characterization of fine particles of ruthenium–alumina composites prepared by different methods.—73-10202
Characterization of fine particles of ruthenium-alumina composites prepared by different methods.—73-03566
Characterization of microporous amorphous alumina–boria.—73-08570
Characterization of the defect structure of polycrystalline Sr-ß-alumina ceramics using high-resolution transmission electron microscopy.—73-06143
Chemical synthesis of metal nanoparticles dispersed in alumina.—73-13807
Chemically vapor deposited alumina coatings on high-speed steel cutting tools.—73-10203
Chemomechanical effects of boric acid in core drilling of alumina.—73-05706
Circuit units, substrates therefor, and method of making.—73-11009
Cluster models of bulk, surface, and impurity structure in α-$Al_2O_3$.—73-05370
Coadsorption of $Mo^{VI}$ species and $Co^{II}$ ions on the surface of γ-alumina.—73-08822
Coal slag corrosion and strength degradation of silicon carbide/alumina composites.—73-17249
Coated glass and method of manufacturing [the] same.—73-03911
Coated refractory composition and method for making the same.—73-00886
Codeposition of α-alumina particles from acid copper sulfate bath.—73-07289
Colored glass.—73-00730
Combination metallic ceramic orthodontic bracket.—73-05209
Compaction and sintering behavior of a high-purity alumina powder treated with coupling agents.—73-05715
Compaction and sintering behavior of a high-purity alumina powder treated with coupling agents.—73-16678
Comparative study of microstructure and fracture behavior in reaction-bonded alumina.—73-03127
Comparison of alumina titanate powders prepared by various technologies.—73-09045
Comparison of the dynamic fatigue behavior of two monolithic SiC and an $Al_2O_3$/SiC composite.—73-17253
Composite dependence of electromotive force of silica-alumina ceramics as oxygen solid electrolyte.—73-14684
Composition and electrical properties of Au-$Al_2O_3$ cermet thin films: a critical study.—73-10209
Composition dependence of superconductivity in $YBa_2(Cu_{4-x}Al_x)O_v$.—73-01509
Compositions of alumina–magnesia spinel synthesized from natural raw materials.—73-10708
Compressibility measurements of ß- and ß´´-alumina.—73-16064
Computational modeling and parametric study of sintering of alumina.—73-09047
Conductive properties in ß´´-alumina ceramics by complex impedance analysis.—73-00941
Conductivity variations in composites of α-zirconium phosphate and alumina.—73-00943
Control of microstructures and properties of composites of the $Al_2O_3$/$ZrO_2$ spinel system: II, $Al_2O_3$/$ZrO_2$ spinel composites prepared by the solution infiltration method.—73-16685
Control of microstructures and properties of composites of the $Al_2O_3$/$ZrO_2$-spinel system: I, Preparation and sintering behavior of $Al_2O_3$-$ZrO_2$ composite powder.—73-12956
Controlled pore size phosphate-alumina material and method for producing [the] same.—73-05210
Cookware coating system.—73-03681
Cordierite–$ZrO_2$ and cordierite–$Al_2O_3$ composites obtained by sonocatalytic methods.—73-12958
Corrections to the phase diagram of the MgO-$Al_2O_3$-$SiO_2$ system.—73-08581
Correlation of green microstructure of $Al_2O_3$ with colloid/interface variables.—73-17121
Corrosion behavior of sliding materials in $NH_3$-$H_2O$ solutions at high temperature.—73-03217
Corrosion behavior of steel in high-alumina cement mortar samples: effect of chloride.—73-00052
Corrosion degradation behavior of [93 wt%] alumina ceramics in hot sulfuric acid.—73-06305
Corrosion degradation behavior of [93 wt%] alumina ceramics in hot sulfuric acid.—73-17219
Corrosion-resistant coatings ($Al_2O_3$) produced by metallorganic chemical vapor deposition using aluminum–tri-sec-butoxide.—73-06762
Corrosion-resistant member for chemical apparatus using halogen series corrosive gas.—73-12359
Crack healing of alumina with a residual glassy phase: strength, fracture toughness, and fatigue.—73-17259
Crack propagation behavior of polycrystalline alumina under static and cyclic load.—73-09554
Crack propagation in alumina during in situ straining by TEM.—73-03251
Crack shielding in Ce-TZP/$Al_2O_3$ composites: comparison of fatigue and sustained load crack growth specimens—correction.—73-09555
Crack shielding in Ce-TZP/$Al_2O_3$ composites: comparison of fatigue and sustained load crack growth specimens.—73-06354
Cracking and delamination of metallorganic vapor-deposited alumina and silica films.—73-09052

Creep behavior of fine-grained two-phase $Al_2O_3$-$Y_3Al_5O_{12}$ materials.—73-17264
Creep deformation of whisker-reinforced alumina.—73-09563
Creep fracture experiments with planar sapphire-copper interfaces stressed in tension.—73-13815
Creep in ($Al_2O_3$+$ZrO_2$) ceramics [investigated] by ultrasonic surface waves.—73-17266
Critical concentration of MgO for the prevention of abnormal grain growth in alumina.—73-16692
Critical stress of microcracking in alumina evaluated by acoustic emission.—73-06362
Crystallization behavior of BaO-$Al_2O_3$-$SiO_2$ intergranular glass compositions in alumina ceramics.—73-08590
Crystallization of B,β″-alumina precursors prepared from metal alkoxides.—73-05378
Crystallization of an $Al_2O_3$-MgO-$SiO_2$ glassy grain-boundary phase.—73-12566
Cutting performance of white ceramic tools having high strength.—73-17269
Cyclic fatigue–crack propagation in a silicon carbide whisker-reinforced alumina composite: role of load ratio.—73-09567
Damage-tolerant laminated composites in thermal shock.—73-13817
DCB methods for examining toughening in alumina reinforced with carbon-coated SiC whiskers.—73-09057
Debinding behavior for injection-molded alumina compacts.—73-02761
Deep cup forming and improvement in dimensional precision of sintered compact from alumina granules.—73-16693
Defect clustering and color in Fe,Ti: α-$Al_2O_3$.—73-05540
Defects in squeeze-cast $Al_2O_3$/Al alloy composites and their effects on mechanical properties.—73-00218
Deformation and microstructure of $Al_2O_3$-particle-reinforced 6061 Al composite.—73-06764
Degradation mechanism of Au/$AlO_x$/Al tunnel junction.—73-07292
Degradation of plasma-sprayed alumina and zirconia coatings on stainless steel during thermal cycling and hot corrosion.—73-00219
Dense $Al_2O_3$/$ZrO_2$ particulate composites by free sintering of coated powders.—73-05730
Densification and grain growth of alumina heated by microwave.—73-05732
Densification behavior of high-purity $Al_2O_3$ and $Al_2O_3$-15 vol% $ZrO_2$.—73-02765
Densification of aggregated alumina powder under cyclic compaction.—73-05733
Dependence of the growth of $Al_2O_3$ films on the growth conditions in the [atomic layer epitaxy] ALE-like process.—73-05735
Dependence of the internal friction and the mechanical properties of ceramics on their grain-boundary structures.—73-03260
Deposition from the vapor phase during induction plasma treatment of alumina powders.—73-09063
Determination of the optical dielectric functions of thin absorbing films from ir reflectivity measurements.—73-08833
Development and application of light-burned MgO-bonded alumina castable.—73-10714
Development of a three-layer laminated composite based on molybdenum disilicide reinforced with alumina platelets.—73-06767
Development of $Al_2O_3$-C refractories for iron-ore smelting reduction furnace.—73-00800
Development of aluminum gate thin-film transistors [TFT's] based on aluminum oxide insulators.—73-04073
Development of ceramic composite membranes for gas separation: IV, Permeation characteristics of γ-alumina membranes.—73-12323
Development of high-alumina brick with good thermal shock resistance.—73-10718
Development of high-performance $Al_2O_3$-C castable.—73-10719
Developments in alumina for ceramic use.—73-05166
Devitrification of the grain boundary glassy phase in a high-alumina ceramic substrate.—73-17122
Dielectric properties of alumina/zirconia composites at millimeter wavelengths.—73-07299
Diffusion bonding behavior of austenitic stainless steel containing titanium and alumina.—73-03575
Diffusion bonding of Inconel 600 to alumina without and with intermediate graded layers.—73-03576
Diffusional crack growth and creep rupture of silicon carbide doped with alumina.—73-06373
Directed oxidation of Al alloy into sintered $Al_2O_3$.—73-06771
Discoloration of alumina ceramics with ultraviolet radiation and elucidation of its mechanism.—73-16449
Dispersion and high-pressure filtration of zircon/alumina composite slurry.—73-05745
Dispersion stability of alumina–wollastonite aqueous suspensions.—73-05746
Durable china.—73-10829
Dynamic compaction of $Al_2O_3$-$ZrO_2$ compositions.—73-12993
Effect of a small amount of liquid-forming additives on the microstructure of $Al_2O_3$ ceramics.—73-16721
Effect of added organics on mechanical properties of alumina green sheets prepared by doctor blade method.—73-05750
Effect of added organics on mechanical properties of alumina green sheets prepared by doctor blade method.—73-12995
Effect of added organics on the fluidity of alumina slurry for doctor blade method.—73-12996
Effect of additives on the electrostatic force of alumina electrostatic chucks.—73-02779
Effect of additives on the electrostatic force of alumina electrostatic chunks.—73-10934
Effect of $Al_2O_3$ and SiC whisker on sintering and mechanical properties of $Si_3N_4$-bonded SiC.—73-13505
Effect of alumina addition on bending fracture behavior in Y-PSZ.—73-13506
Effect of alumina on sintering behavior and electrical conductivity of high-purity yttria-stabilized zirconia.—73-14693
Effect of atmosphere on microstructural evolution of pressureless-sintered $Al_2O_3$/SiC composites.—73-05752
Effect of atmosphere on microstructural evolution of pressureless-sintered $Al_2O_3$/SiC composites.—73-12997
Effect of carbon coating on mechanical strength of SiC whisker-reinforced alumina composites.—73-17281
Effect of chemically added zirconia and yttria on the mechanical properties of zirconia-dispersed alumina.—73-08510
Effect of compaction pressure on the internal structure of sintered alumina.—73-05756
Effect of compaction pressure on the internal structure of sintered alumina.—73-13001
Effect of Cr on interfacial interaction and wetting mechanisms in Ni alloy/alumina systems.—73-13825
Effect of dispersed particle size on mechanical properties of alumina/nonoxide composites.—73-09574
Effect of dispersed particle size on mechanical properties of alumina/nonoxide composites.—73-17283
Effect of functionalities of binders on rheological behavior of alumina suspensions and properties of green sheets.—73-09077
Effect of functionalities of binders on rheological behavior of alumina suspensions and properties of green sheets.—73-16726
Effect of grain size on Hertzian contact damage in alumina.—73-13507
Effect of grain size on strength, fracture toughness, and static fatigue crack growth in alumina.—73-03265
Effect of grain size on the ballistic performance of aluminas.—73-06380
Effect of grain size on the cyclic fatigue behavior of sintered $Al_2O_3$ under rotary bending.—73-06381
Effect of heat treatment on alumina short-fiber-reinforced magnesium composites.—73-16727
Effect of heat treatment on properties of alumina green sheet.—73-02784
Effect of high-temperature exposure on the tensile strength of alumina fiber Nextel 610.—73-17287
Effect of ionizing and displacive radiation on the thermal conductivity of alumina.—73-02582
Effect of liquid-forming additives on low-temperature superplastic deformation of alumina.—73-02583
Effect of MgO on microstructural evolution of alumina prepared from hydrosol-gel process of boehmite in plaster mold.—73-17124
Effect of microstructural scale on thermal shock resistance of aluminum-reinforced alumina.—73-03578
Effect of microstructure on mechanical properties and cutting performance of $Al_2O_3$-Ti(C,N) ceramics.—73-06385
Effect of microstructure on mechanical properties and cutting performance of $Al_2O_3$-Ti(C,N) ceramics.—73-13511
Effect of mixed solvent on the formation of monodispersed $Al_2O_3$ powders by hydrolysis of aluminum sec-butoxide [$ABu^s$].—73-16732
Effect of mixed solvent on the formation of monodispersed $Al_2O_3$ powders by hydrolysis of aluminum sec-butoxide.—73-05763
Effect of moisture content of granules on the properties of green and sintered bodies of alumina ceramics.—73-16733
Effect of nonstoichiometry on the luminescence properties of α-$Al_2O_3$.—73-02585
Effect of notch-root radius on the fracture toughness of a fine-grained alumina.—73-06387
Effect of oxygen partial pressure on tungsten–alumina bonding behavior.—73-03579
Effect of particle size distribution of raw powder on the uniformity of alumina body formed by centrifugal casting.—73-02790
Effect of particle size distribution of raw powder on the uniformity of alumina body formed by centrifugal casting.—73-13013
Effect of paste composition and particle size on the metallizing of alumina ceramics.—73-10222
Effect of pitch and phenolic resin on the mechanical properties of $Al_2O_3$-C nozzle.—73-00804
Effect of preparation conditions on properties of green and sintered body in alumina.—73-16735
Effect of processing parameters on phase and microstructure evolution in RBAO ceramics.—73-16737
Effect of purity on the erosion of sintered alumina.—73-09579
Effect of reaction products on the fracture resistance of a metal/ceramic interface.—73-03581
Effect of seeding on preparation of $ZrO_2$/$Al_2O_3$ composite by sol-gel method.—73-13017
Effect of $SiO_2$ and $TiO_2$ on the sinterability and microstructure of alumina ceramics.—73-16741
Effect of stabilizing agents on synthesis of monodispersed $Al_2O_3$ powders by hydrolysis of aluminum sec-butoxide.—73-02796
Effect of stabilizing agents on synthesis of monodispersed $Al_2O_3$ powders by hydrolysis of aluminum sec-butoxide.—73-13019
Effect of surface aluminum oxide films on thermally induced hillock formation.—73-05772
Effect of surface grinding on flexural strength of alumina.—73-09581
Effect of surface-limited microcracks on the effective Young's modulus of ceramics: III, Experiments.—73-13513
Effect of $Ta_2O_5$ additions on phase formation during synthesis and sintering of β-alumina-based ceramics.—73-02799
Effect of the added seed on phase transformation and powder properties in the fabrication of $Al_2O_3$ powder by sol-gel process.—73-16746
Effect of the processes of thermal cycling on the structure and properties of heat-resistant ceramics.—73-00808
Effect of thermal expansion mismatch between the intergranular glass and crystal phases on the fracture toughness of alumina ceramics.—73-09582
Effect of thermoelastic anisotropy on the *R*-curve behavior of monolithic alumina.—73-17295
Effect of water on the dispersion of colloidal alumina in cyclohexane solutions of aerosol OT.—73-13023
Effect of water vapor on the growth of aluminum oxide films by low-pressure chemical vapor deposition.—73-09101
Effect of whisker orientation on toughening behavior and cutting performance of $SiC_w$-$Al_2O_3$ composite.—73-06391
Effect of zirconia allotropes on fracture toughness of α-alumina.—73-09584
Effect of zirconium on wettability of alumina and zirconia by silver-indium base alloy.—73-00223
Effectiveness of a dispersant for the thickening of alumina slurries while retaining the fluidity.—73-09102
Effects of addition of polyacrylic ammonium [PAN] on colloidal processing of α-alumina.—73-02802
Effects of $Al_2O_3$ addition on the sinterability and ionic conductivity of Nasicon.—73-07308
Effects of $Al_2O_3$ and glass on formation of needlelike mullite from kaolin.—73-02803
Effects of alkali-earth metal ion implantation into alumina surface layer on its acidic-basic properties.—73-16464
Effects of CaO impurity on microstructural evolution during sintering of alumina.—73-02805
Effects of caustic concentration and bauxite composition on economics of Bayer alumina plants.—73-15722
Effects of $Cr_3C_2$ particulate-reinforced alumina composites on microstructure and mechanical properties.—73-16748
Effects of disperse system history on heat compaction of materials containing α-$AlO_{1.5}$ and $TiO_2$.—73-16749
Effects of mineralizer on sintering of alumina.—73-13033
Effects of preparation conditions on properties of green and sintered body in alumina.—73-09107
Effects of solids loading and dispersion schedule on the state of aqueous alumina/zirconia dispersions.—73-17128
Effects of TiC content and grain size on cutting performance of $Al_2O_3$-TiC ceramic tools.—73-08511
Elaboration by acid dispersion of yttria-stabilized zirconia-alumina composites with good mechanical properties.—73-16757
Elastic and dry sliding characteristics of [high-velocity oxyfuel] HVOF-sprayed $Al_2O_3$ and $Al_2O_3$-$TiO_2$ coatings.—73-09588
Elastic moduli of rf-sputtered $Al_2O_3$-$TiO_2$ amorphous films.—73-03279
Electrical conduction in $CaF_2$ and $CaF_2$-$Al_2O_3$ nanocomposite films on $Al_2O_3$ substrates.—73-07313
Electrical conductivity of alumina/aluminum composites synthesized by directed metal oxidation.—73-13830
Electrical properties of MgO-doped β-alumina ceramics prepared from the metal alkoxides.—73-00958
Electrical properties of MgO-doped β-alumina ceramics prepared from the metal alkoxides.—73-12790
Electrochemical behavior of portland-cement/high-alumina-cement systems at early hydration times.—73-13716
Electrochemical element and method of producing [the] same.—73-11014
Electroconductivity of sintered bodies of α-$Al_2O_3$-TiN composite prepared by CVD reaction in a fluidized bed.—73-08859
Electrophoretic deposition and its use to synthesize $ZrO_2$/$Al_2O_3$ microlaminate ceramic/ceramic composites.—73-16760
Electrophoretic deposition of silica/alumina colloids for the manufacture of CMC's.—73-16761
Empirical density estimation of green body formed by uniaxial press.—73-02814
Empirical density estimation of green body formed by uniaxial press.—73-13045
Enrichment of aluminum hydroxides and oxides for the advanced ceramics.—73-08513
Environmental effects on wear behavior of alumina.—73-09592
Erosion of an aligned alumina-stainless steel composite.—73-06782
Etching investigation of $SiC_w$/$Al_2O_3$ and Incusil-ABA joints.—73-03586
Ethylene oxide/propylene oxide block copolymers as green binders for ceramics.—73-15942
Evaluating the mechanical properties of commercial DRA [discontinuously reinforced alumina].—73-06785
Evaluation of adhesion strength in a Ti/$Al_2O_3$ composite.—73-00231
Evaluation of fracture toughness for structural ceramics using SEPB specimens: IV, Fracture behavior of α-alumina polycrystals with different grain sizes.—73-03283
Evaluation of fracture toughness for structural ceramics using SEPB specimens: IV, Fracture behavior of α-alumina polycrystals with different grain sizes.—73-13526
Evaluation of whisker alignment in axisymmetric $SiC_w$-reinforced $Al_2O_3$ composite materials.—73-16766
Evidence for anelastic creep recovery in silicon carbide whisker-reinforced alumina.—73-13528

Exhaust gas disposable catalyst and method of manufacturing the same.—73-02035
Experimental/analytical investigation of plasma-sprayed alumina coatings.—73-09124
Explanation of clogging phenomena of CC [continuous casting] submerged nozzle.—73-00814
Extraction of alumina from Egyptian kaolin ore with sulfuric and hydrochloric acids.—73-12270
Fabrication and characterization of short alumina fiber-reinforced mullite composites.—73-02820
Fabrication and microstructure of $Al_2O_3$-SiC-YAG hybrid composites prepared by particulate dispersion.—73-09125
Fabrication and properties of (Y,Ce)-TZP/$Al_2O_3$ and Y-TZP/$Al_2O_3$ composites from fine powders prepared by a hydrolysis technique.—73-02821
Fabrication and properties of (Y,Ce)-TZP/$Al_2O_3$ substrates.—73-04099
Fabrication and X-ray photoelectron spectroscopy of granular Ge in Al and $Al_2O_3$ matrices.—73-09127
Fabrication of $Al_2O_3$/W nanocomposites.—73-10228
Fabrication of alumina sheets by extrusion.—73-02823
Fabrication of alumina sheets by extrusion.—73-13053
Fabrication of continuous-fiber-reinforced polycrystalline oxide composites via molten salt infiltration.—73-09129
Fabrication of dense ß, ß´´-alumina ceramics by reaction sintering.—73-05802
Fabrication of dense ß, ß´´-alumina ceramics by reaction sintering.—73-16773
Fabrication of engineering ceramics by injection molding a suspension with optimum powder properties: II, Mechanical properties and wear behavior.—73-09595
Fabrication of low-shrinkage reaction-bonded alumina ceramics.—73-02826
Fabrication of transparent γ-$Al_2O_3$ from nanosize particles.—73-16777
Fabrication of zirconia-alumina functionally gradient material by superplastic diffusion bonding.—73-15924
Factors influencing the thermal shock behavior of ceramics.—73-05565
Fatigue behavior of sintered $Al_2O_3$ under rotary bending and static fatigue.—73-17318
Fatigue crack growth behavior of alumina plasma-sprayed stainless steel.—73-03588
Fatigue crack growth behavior of alumina plasma-sprayed stainless steel.—73-10229
Fatigue damage development in $Al_2O_3$/Al composites.—73-03291
Fatigue damage in ceramic materials caused by repeated indentation.—73-03292
Fibrous monolithic ceramics: IV, Mechanical properties and oxidation behavior of the alumina/nickel system.—73-09598
Film blowing of ceramics.—73-16782
Finite element studies of tensile testing on thin-film multilayers.—73-13532
First-principles calculation of electronic, optical, and structural properties of α-$Al_2O_3$.—73-05400
Flame-retaining ceramic burner nozzle.—73-12366
Flat *R*-curve from stable propagation of indentation-cracks in coarse-grained alumina.—73-06422
Flexural strength and surface grinding properties of alumina.—73-09599
Fluorescent lamps having reduced interference colors.—73-03919
Forces between alumina surfaces in salt solutions: non-DLVO forces and the implications for colloidal processing.—73-05809
Formation and sintering of alkoxy-derived $Al_2O_3$-$TiO_2$ composite powders.—73-09136
Formation and sintering of alkoxy-derived $Al_2O_3$-$TiO_2$ composite powders.—73-16785
Formation and sintering of yttria-doped tetragonal zirconia with 50 mol% alumina prepared by the hydrazine method.—73-13063
Formation mechanism of pores in massive $Si_3N_4$-$Al_2O_3$-MgO ceramics during sintering.—73-16786
Formation of $Al_2O_3$ fiber-reinforced AlN/Al matrix composites by Al(Mg) melt nitridation.—73-06793
Formation of alumina/zirconia (3 mol% yttria) composite powders prepared by the hydrazine method.—73-16788
Formation of La-ß-aluminate in α-alumina matrix and its influence on mechanical properties.—73-02833
Formation of macro- and microcracks during machining of ceramics.—73-05814
Formation of needlelike grains in $Al_2O_3$.—73-16792
Formation of surface layers of ceramics during grinding and sharpening.—73-06607
Formation of zirconia solid solutions containing alumina prepared by new preparation method.—73-09142
Forming of alumina insulation layers by double-step electrophoretic deposition.—73-02834
Forming of alumina insulation layers by double-step electrophoretic deposition.—73-10951
Forming of alumina powder by electrophoretic deposition.—73-02835
Fourier transform infrared attenuated total reflection spectroscopy linear dichroism study of sodium dodecyl sulfate adsorption at the $Al_2O_3$/water interface using $Al_2O_3$-coated optics.—73-12141
Fracture origins and evaluation of fracture strength of aluminum oxide ceramic thin coating films.—73-17330
Fracture resistance of silicon-carbide-platelet-reinforced alumina composite.—73-03298
Fracture strength testing of δ-alumina fibers with variable diameters and lengths.—73-09601
Fracture strength-fracture resistance response and damage resistance of sintered $Al_2O_3$-$ZrO_2$ (12 mol% $CeO_2$) composites.—73-17331
Fracture toughening mechanisms in the $SiC_w$/$Al_2O_3$ composite system.—73-06437
Fracture toughness evaluation of 2040-Al/$Al_2O_3$ particulate composites by instrumented impact.—73-03300
Fracture toughness measurements on SiC/$Al_2O_3$ composite.—73-03301
Fracture toughness testing in alumina.—73-06442
Friction and wear thresholds of alumina-chromium steel pairs sliding at high speeds under dry and wet conditions.—73-17337
Friction behavior of ceramic fiber-reinforced aluminum metal-matrix composites against a 440C steel counterface.—73-03591
Friction microprobe investigation of particle layer effects on sliding friction.—73-05049
Friction-chemical activation of polycrystalline aluminum and zirconium oxides in water dispersions.—73-02837
Gas turbine elements bearing coke inhibiting coatings of alumina.—73-03682
Glass composition.—73-14539
Glass-bonded ceramic composites.—73-03417
Glass-ceramics and color methods.—73-03927
Graded casting of materials with continuous gradients.—73-16804
Graded compositions and microstructures by infiltration processing.—73-09149
Grain size dependence of fracture toughness in polycrystalline alumina.—73-03305
Grain size effect on abrasive wear mechanisms in alumina ceramics.—73-06447
Grain size effect on high-temperature fatigue crack growth in polycrystalline $Al_2O_3$.—73-17340
Grain-boundary modification of ceria-stabilized tetragonal zirconia polycrystals by a small amount of alumina addition.—73-09151
Granular abrasive material.—73-03418
Green testing of pressed compacts.—73-09608
Grinding with continuous dressing (CD) for improved performance of ceramic-bonded fused alumina grinding wheels: I.—73-01787
Groove angles and surface mass transport in polycrystalline alumina.—73-09409
Group IVB oxide addition to noble metal on rare-earth-modified silica alumina as hydrocarbon conversion catalyst.—73-05215
Growth and properties of thin $Al_2O_3$ films.—73-05829
Growth mechanism of gold films on alumina.—73-00236
Growth of α-$Al_2O_3$ platelets in the HF-γ-$Al_2O_3$ system.—73-16807
Growth of $Al_2O_3$ single crystals by the Czochralski method.—73-05830
Growth of $Al_2O_3$ single crystals by the Czochralski method.—73-13079
Growth of alumina/metal composites into porous ceramics by the oxidation of aluminum.—73-13844
Growth of gamma-$Al_2O_3$ thin films on silicon by low-pressure metallorganic chemical vapor deposition.—73-09155
Growth of sodium clusters on the surface of Na ß´´-alumina crystals induced by electron bombardment.—73-09157
Heat conductive colored aluminum nitride sintered body.—73-12467
Heat-conductive colored aluminum nitride sintered body and method of preparing the same.—73-12468
Heating conditions to synthesize rod-shaped ß-$LiAlO_2$ crystals.—73-16812
High-density sol-gel alumina-based abrasive vitreous bonded grinding wheel.—73-09771
High-efficiency process for producing high-purity alumina.—73-12369
High-rate aluminum oxide deposition by Meta Mode reactive sputtering.—73-13087
High-resolution transmission electron microscopy studies of a near Σ11 grain boundary in α-alumina.—73-06226
High-speed centrifugal compaction and low-temperature sintering of submicron alumina powder.—73-16819
High-speed sliding of $Al_2O_3$ pins against an En-24 steel disk.—73-06449
High-temperature ceramic nut.—73-15945
High-temperature elasticity of single-crystal $Al_2O_3$ fibers by Brillouin spectroscopy.—73-08881
High-temperature strength and toughness of electrophoretically deposited alumina/lanthanum aluminate laminates.—73-17348
Hot deformation of 6061 alumina composite materials.—73-06801
Hot-grip tensile method for alumina-fiber testing.—73-01903
Hot-pressed $Al_2O_3$/SiC whisker/TiC nanocomposites.—73-05847
Hot-pressed $Al_2O_3$/SiC whisker/TiC nanocomposites.—73-13548
Hot-pressing after cold cyclic compaction of alumina powder matrix mixtures—effects of cold cyclic compaction.—73-09164
Hot-pressing kinetics of alumina composites reinforced with SiC whiskers.—73-02852
Hot-pressing of TiN-alumina composites.—73-16822
Hybrid microwave-assisted chemical vapor infiltration of alumina fiber composites.—73-16823
Hybrid substrate.—73-01054
Hydronium exchange of polycrystalline K-Na ß´´/ß-$Al_2O_3$.—73-04110
Hydroxyapatite/$Al_2O_3$ composite biomaterial implant.—73-05170
ICP sintering of attrition-milled $Al_2O_3$-5 wt% Al precursor: effect of power input and gas pressure.—73-16829
Immersion nozzle for prevention of alumina clogging.—73-00822
Impedance analysis as a tool for designing ß´´-alumina microstructures.—73-00978
Impedance studies of the cell Pt/(Na, Sr)ß´´-alumina/Pt.—73-04111
Impregnation and firing of $Al_2O_3$ compact with $CrO_3$ saturated solution.—73-02857
Improved precursor ceramics for proton-conductive ß/ß´´-aluminas.—73-04113
In situ reacted $TiB_2$-reinforced alumina.—73-03312
In situ TEM observations of the tetragonal-to-monoclinic phase transformation of zirconia in $Al_2O_3$-$ZrO_2$ (2 mol% $Y_2O_3$) composite.—73-09465
In situ transmission electron microscopy study of electron-beam-induced amorphous-to-crystalline transformation of $Al_2O_3$ films on silicon.—73-03153
Inelastic electron tunneling spectra of lubricant oil additives on native aluminum oxide surfaces.—73-09467
Influence of alumina content on homogeneous nucleation in 57.5$SiO_2$-21.25$Na_2O$-21.25CaO (mol%) glass.—73-14006
Influence of alumina on fast-fired porcelain tiles.—73-07262
Influence of alumina porosity in glass-ceramic adhesion.—73-12327
Influence of batch preparation method on the structure and properties of ceramics in the $Al_2O_3$-$ZrO_2$-$Y_2O_3$ system.—73-02865
Influence of coarse particle shape on packing and sintering of bimodal-size-distributed alumina powder mixtures.—73-09172
Influence of coarse particle size on packing and sintering behavior of bimodal size distributed alumina powder mixtures.—73-16834
Influence of coarse particle size on packing and sintering behavior of bimodal-size-distributed alumina powder mixtures.—73-05864
Influence of combination of ball diameters and rotation speed on grinding performance of alumina by ball milling.—73-08345
Influence of combination of ball diameters and rotation speed on grinding performance of alumina by ball milling.—73-16835
Influence of crack propagation path on the fracture toughness of polycrystalline $Al_2O_3$.—73-17356
Influence of deflocculants on the characteristics of alumina bodies obtained by slip casting.—73-05865
Influence of different $Al_2O_3$-containing batch materials on melting, fining, and properties of soda-lime-silica glasses.—73-07145
Influence of grain boundaries on the conductivity and ion-exchange rate of ß´´-alumina polycrystalline isomorphs.—73-04116
Influence of grain size and secondary phase on the fracture toughness of sintered MgO bodies: I, Addition of $Al_2O_3$.—73-03317
Influence of grain size and secondary phase on the fracture toughness of sintered MgO bodies: I, Addition of $Al_2O_3$.—73-13551
Influence of grinding on the surface properties of α-aluminas.—73-02868
Influence of interparticle forces on the rheological behavior of pressure-consolidated alumina particle slurries.—73-05868
Influence of microstructure on grindability of alumina ceramics.—73-06232
Influence of oxide additives, firing temperature, and dispersing media on sintered $Al_2O_3$.—73-05869
Influence of SiC whisker size on the mechanical properties of reinforced alumina.—73-09621
Influence of slip casting and dry pressing on structure evolution of alumina compacts.—73-05874
Influence of the basic compound chemical nature on the kinetics of γ-to-α-alumina conversion and the packaging of α-alumina.—73-16176
Influence of the deposition conditions on the optical, electrical, and magnetic properties of sputtered Fe-$Al_2O_3$ and Ni-$Al_2O_3$ nanocermet films.—73-10239
Influence of the matrix glaze and $Al_2O_3$ substrate on the electrical conduction paths in the $SnO_2$ thick-film resistor system.—73-01211
Influence of yttrium on microstructure and point defects in an α-$Al_2O_3$ in relation to oxidation.—73-17148
Influence of zirconia addition on the sintering behavior of bimodal size distributed alumina powder mixtures.—73-16844
Influencing microstructure and strength of high-alumina porcelain: II, Raw materials and bodies.—73-02874
Influencing microstructure and strength of high-alumina porcelain: III, Properties of porcelain test bodies.—73-02875
Influencing microstructure and strength of high-alumina porcelain: IV, Body porosity and conclusion.—73-02876
Infrared absorption spectra of nano-alumina.—73-05422
Infrared laser-assisted zone refining of inorganic materials.—73-02878
Inhibiting coke formation by coating gas turbine elements with alumina-silica sol-gel.—73-13916
Inhibiting coke formation by coating gas turbine elements with alumina.—73-03686
Initial-stage sintering of ß-alumina.—73-17149
Interaction between α-alumina surface and polyacrylic acid [PAA].—73-02880
Interaction between α-alumina surface and polyacrylic acid.—73-12820
Interaction pathway of chloride ions with γ-$Al_2O_3$: surface acidity and thermal stability of the Cl/γ-$Al_2O_3$ system.—73-08892
Interband electronic structure of α-alumina up to 2167 K.—73-05423
Interface and microstructure development of coated alumina powders during heating.—73-13406
Interface engineering in alumina/glass composites.—73-16846
Interface-controlled phase transformation and abnormal grain growth of alpha-$Al_2O_3$ in thin gamma-alumina films.—73-12610

Interfacial layer formation of the $Al_2O_3$/Si structures grown by low-pressure metallorganic chemical vapor deposition.—73-09187
Interfacial reactions of thin titanium aluminide films with $Al_2O_3$ films and with sapphire.—73-13851
Internal reduction of chromium-doped α-alumina.—73-06240
Ion-beam mixing of iron oxide marker layers in doped and undoped alumina thin films.—73-05173
Ir ellipsometry of the highly anisotropic materials α-$SiO_2$ and α-$Al_2O_3$.—73-12615
Iron–alumina nanocomposites obtained by mechanosynthesis.—73-13854
Isopropylation of dibenzofuran over solid acid catalysts.—73-02625
Isothermal phase transformation behaviors in $Al_2O_3$-coated Y-TZP powders.—73-12618
Kinetics of wetting and spreading of Cu-Ti alloys on alumina and glassy carbon substrates.—73-03613
Kinetics optimization of uv-curable aqueous slurries for applications in ceramic processing.—73-16848
Lanthanide ion exchange in sodium β-alumina.—73-05428
Lapping abrasive of alumina–zirconia system and method for producing the same.—73-00001
Lapping and polishing process to achieve high-quality alumina surfaces for applications in device fabrication.—73-13113
Large surface area of $SiO_2$-coated fibrous crystals of alumina after heating at >1573 K.—73-13114
Laser chemical deposition of aluminum oxide from the gas phase of beta-diketonate complexes.—73-16849
Laser melting of plasma-sprayed alumina coatings.—73-13860
Laser melting of refractory $Al_2O_3$-$ZrO_2$ ceramics.—73-13116
Laser surface modification of $Al_2O_3$-based ceramics.—73-09190
Layered tantalum-aluminum oxide films deposited by atomic layer epitaxy.—73-04126
Leaching of ceramic materials.—73-15946
Lifetime prediction for ceramic materials under constant and cyclic load.—73-17371
Liquation and crystallization in melts of the system $Al_2O_3$-$B_2O_3$.—73-00367
Lithium salts as set accelerators for high alumina cement [HAC].—73-06682
Local repairing of lining glass layers by the alumina powder composite sol-gel method.—73-13863
Local structure around aluminum in glasses of the system $Al_2O_3$-PbO-CdO.—73-06935
Low-expansion USP type I amber glass.—73-03939
Lubricated rolling wear of SiC-whisker-reinforced $Al_2O_3$ composites against M2 tool steel.—73-06470
Machinability of rate-controlled sintered alumina.—73-02888
Machinability of rate-controlled sintered alumina.—73-13125
Macrocrystalline alpha-alumina hexagonal platelets.—73-12311
Magnetic ordering in granular Ni-$Al_2O_3$.—73-04619
Manganese- and tantalum-modified titanium alumina alloys.—73-03688
Martensite transformation behavior during isothermal aging in partially stabilized zirconia with and without alumina addition.—73-03161
Material, structure, filter, and catalytic converter.—73-12375
Mathematical modeling simulation for segregation of PVA during drying.—73-16859
Measurement of diffusion of PVA through pores of an $Al_2O_3$ compact.—73-05909
Measurement of diffusion of PVA through pores of an $Al_2O_3$ compact.—73-12830
Measurements of internal friction coefficient of SiC and $Al_2O_3$ powders.—73-16538
Mechanical and electrical properties of $Al_2O_3$/SiC nanocomposites.—73-05594
Mechanical behavior and microstructural development in phosphate-modified high-alumina cement.—73-10034
Mechanical properties of a laser-cut alumina matrix-silicon carbide whisker composite.—73-09632
Mechanical properties of $Al_2O_3$ and $Al_2O_3$+$ZrO_2$ ceramics reinforced by SiC whiskers.—73-09633
Mechanical properties of $Al_2O_3$ particle–Y-TZP matrix composite and its toughening mechanism.—73-09634
Mechanical properties of alumina-mullite whisker composites.—73-17382
Mechanical properties of composites of alumina and partially stabilized zirconia.—73-09636
Mechanical properties of hot-pressed SiC particulate-reinforced $Al_2O_3$ matrix.—73-03333
Mechanical properties of partially dense alumina produced from powder compacts.—73-17388
Mechanical properties of porous alumina ceramics.—73-17389
Mechanical properties of reaction-bonded $Al_2O_3$/$ZrO_2$ composites.—73-17390
Mechanical properties of squeeze-cast zinc alloy matrix composites containing α-alumina fibers.—73-06820
Mechanical properties of unidirectionally oriented SiC whisker/$Al_2O_3$ composite.—73-06484
Mechanical properties of unidirectionally oriented SiC whisker/$Al_2O_3$ composite.—73-13567
Mechanical properties of zirconia–alumina whisker composite ceramics.—73-13568
Mechanical properties of zirconia-alumina whisker composite ceramics.—73-06485
Mechanically induced zone darkening of alumina/ceria-stabilized zirconia composites.—73-17393
Mechanism of resistance variation of thick-film resistors on commercial 96% alumina substrates.—73-00994
Mechanism of resistance variation of thick-film resistors on commercial 96% alumina substrates.—73-10971
Mechanism on stability of α-alumina suspensions.—73-09202
Mechanochemical activation of high-alumina cements [HAC]: I, Hydration behavior.—73-00137
Mechanochemical effect for some $Al_2O_3$ powders by attrition milling.—73-09203
Metal on rare-earth-modified silica–alumina as hydrocarbon conversion catalyst.—73-02047
Metastable phase selection and partitioning for $Zr_{(1-x)}Al_xO_{(2-x/2)}$ materials synthesized with liquid precursors.—73-16215
Methane dimerization through ion conductors (β-$Al_2O_3$).—73-04138
Method for increasing the wettability of aluminum metal to alumina-containing fibers.—73-10325
Method for preparing molded articles of high-purity alumina fibers.—73-15948
Method for producing interlevel stud vias.—73-04218
Method for producing monocrystalline alumina grains.—73-03419
Method for producing transparent polycrystalline body with high-ultraviolet transmittance.—73-02048
Method for production of needlelike crystalline particles.—73-12382
Method for protecting articles from hydrogen absorption by application of an alumina coating.—73-03692
Method for synthesizing microporous crystalline material.—73-05226
Method for the preparation of alpha-aluminum oxide powder.—73-12384
Method for the reactivation of spent alumina-supported hydrotreating catalysts.—73-05228
Method of making porous alumina.—73-05231
Method of making refractory ceramic products and the products thereof.—73-04036
Method of producing a ceramic fiber-reinforced glass-ceramic matrix composite.—73-10646
MgO-MgO·$Al_2O_3$-C brick.—*73-10743*
Micro- and macrostructural factors in DRA [discontinuously reinforced alumina] fracture resistance.—73-06827
Microhardness anisotropy and the indentation load/size effect in MgO·x$Al_2O_3$ single crystals.—73-02644
Microlaminate ceramic/ceramic composites (YSZ/$Al_2O_3$) by electrophoretic deposition.—73-16867
Microstructural changes and mechanical properties of mullite-$ZrO_2$ and mullite-$ZrO_2$-$Al_2O_3$ composites prepared using in situ reaction between synthetic zircon and alumina.—73-17399
Microstructural investigation of κ-modification layers in CVD α-$Al_2O_3$/κ-$Al_2O_3$ multilayer coatings.—73-03165
Microstructural modifications in Al-5.7 wt% Cu-30 vol% $Al_2O_3$ fibers during isothermal heat treatment.—73-06830
Microstructural observations on constrained densification of alumina powder containing a periodic array of sapphire fibers.—73-13421
Microstructural study of $Al_2O_3$/Ti joints brazed with different Ag-Cu filler metals.—73-03618
Microstructural study of alumina brazed with a copper-nickel-zirconium alloy.—73-03619
Microstructure and fracture behaviors at high temperatures for $Al_2O_3$-SiC nanocomposites.—73-06491
Microstructure and mechanical properties of hybrid sol-gel-processed $Al_2O_3$-$ZrO_2$ composites.—73-09482
Microstructure and mechanical strength of $TiO_2$-doped $Al_2O_3$ ceramics fired in vacuum atmosphere.—73-17160
Microstructure and phase transformation of α-alumina seeded boehmite gel.—73-13425
Microstructure and properties of aluminum tungsten oxide ceramics synthesized by a high-power cw $CO_2$ laser.—73-17162
Microstructure and properties of Nextel 610 fiber-reinforced ceramic and metal matrix composite.—73-17164
Microstructure and properties of the sintered composite prepared by hot-pressing of TiN-coated alumina powder.—73-17165
Microstructure development during sintering in polycrystalline MgO·1.5$Al_2O_3$ spinel.—73-06256
Microstructure development during sintering polycrystalline MgO·1.5$Al_2O_3$ spinel.—73-17166
Microstructure of pressureless-sintered silver-toughened alumina: an in situ TEM study.—73-03173
Microwave hybrid heating of alumina filaments.—73-05918
Microwave processing of Ni-$Al_2O_3$ composites.—73-03622
Microwave sintering of large alumina bodies.—73-05924
Mixed conduction in β-alumina-type materials: a critical review.—73-14719
MOCVD of beta-alumina.—73-16872
Modified powder route for the preparation of sol-gel-process-synthesized magnesia and alumina.—73-09215
Multinuclear high-resolution solid-state nuclear magnetic resonance studies of amorphous silica aluminas.—73-02339
Multipurpose photochromic brown glasses.—73-00750
Na to K vapor-phase exchange in polycrystalline β″-alumina.—73-03104
Nanoparticulate alumina, silica, and aluminosilicate membranes.—73-13145
Nanostructural control of sol-gel-derived porous alumina via modification of sol.—73-02898
Neighbor switching by grain-boundary penetration during diffusional deformation of an alumina/zirconia composite.—73-09494
Neutron diffraction measurements of the residual stresses in $Al_2O_3$-$ZrO_2$ ($CeO_2$) ceramic composites.—73-13574
Ni-$Al_2O_3$ gradient materials by powder metallurgy.—73-03629
Nonexponential fluorescence decay and multiphonon relaxation of the $^4F_{3/2}$ level of $Nd^{3+}$ in sodium β″-alumina.—73-02648
Nonmagnetic substrate material and floating-type magnetic head.—73-12390
Nonplanar $Al_2O_3$/YPSZ laminates by electrophoretic deposition using $Al_2O_3$ fiber electrodes.—73-16883
Novel applications of silver beta-alumina in galvanic cell sensors.—73-07347
Onsager effect in luminescence of $Al_2O_3$ crystals: II, Radiative annihilation of autolocalized excitons.—73-16551
Optical parameters of the film-type reversible recording media Al-$VO_2$-AK-113F and Al-$VO_2$-$Al_2O_3$.—73-05603
Optical properties of $Al_2O_3$ thin films prepared by reactive evaporation.—73-02652
Optimization of an alumina slip for pressure filtration.—73-16888
Optimizing plasma-sprayed alumina titania coatings using statistical methods.—73-09228
Oxidation behavior of the sintered $Si_3N_4$-$Y_2O_3$-$Al_2O_3$ system.—73-03226
Oxide catalyzed reactions of ethylene oxide under conditions relevant to ethylene epoxidation over supported silver.—73-02660
Particle attraction effects on the centrifugal casting and extrusion of alumina.—73-09231
Particle impact damage of engineering ceramics.—73-06498
Permeabilities of unsupported ceramic membranes of alumina.—73-12854
Phase diagram of the subsolidus region of the quasi-binary system $BeAl_2O_4$-($BeFe_2O_3$).—73-16247
Phase equilibria in the CaO-$Me_2O_3$-$CaCl_2$-$H_2O$ system.—73-02378
Phase equilibria, microstructure, and properties of some MgO-$Al_2O_3$ refractories.—73-10755
Phase evolution in $Al_2O_3$ fiber prepared from an oxychloride precursor.—73-02918
Phase identification in calcia–alumina fibers crystallized from amorphous precursors.—73-02384
Phase transformation in chemically vapor deposited κ-alumina.—73-17180
Phase transformations of alumina derived from ammonium aluminum carbonate hydroxide (AACH).—73-05454
Photocatalytic property of $TiO_2$ anchored on porous alumina ceramic support by the alkoxide method.—73-05612
Photocatalytic property of $TiO_2$ anchored on porous alumina ceramic support by the alkoxide method.—73-16564
Photochemical reactions of pyrene on surfaces of γ-alumina and silica–alumina.—73-12856
Photochromic glasses in the system SrO-ZnO-$Al_2O_3$.—73-03750
Photochromism of spiropyran doped in $Al_2O_3$-$SiO_2$ gels prepared by the sol-gel process.—73-12858
Piezospectroscopic determination of residual stresses in polycrystalline alumina.—73-05614
Platey alumina.—73-12393
Polarized absorption spectra and intensities of $Er^{3+}$ in sodium beta-double-prime alumina crystals.—73-12861
Polycrystalline sintered abrasive granules based on α-$Al_2O_3$.—73-03420
Pore size distribution of cast, compressed, and lightly sintered alumina with preliminary mechanical treatments.—73-13438
Pore sizes and filtration rates from two alumina slips.—73-13168
Pore structure of hardened alumina cement paste by water vapor sorption.—73-06696
Porous amorphous silica-alumina.—73-10785
Potential interlayer materials for the microwave joining of alumina.—73-16902
Precious metal catalysts with oxygen-ion conducting support.—73-00294
Prediction of indentation-load dependence of fracture strengths from *R*-curves of toughened ceramics.—73-17413
Preparation and characteristics of ceramic composite powders coated with $Al_2O_3$: III, Composite powders of $Al_2O_3$-$ZrO_2$.—73-05956
Preparation and characterization of a composite palladium ceramic membrane.—73-13883
Preparation and characterization of dispersed cobalt oxide supported on γ-$Al_2O_3$.—73-02675
Preparation and characterization of thin films of MgO, $Al_2O_3$, and $MgAl_2O_4$ by atomic layer deposition [ALD].—73-05959
Preparation and fracture characteristic of laminated alumina/mullite composite.—73-17414
Preparation and permeation characteristics of alumina composite membranes by CVD and evaporation-oxidation process.—73-13175
Preparation and some properties of porous alumina ceramics obtained by the gelatination [by HCl] of ammonium alginate.—73-02937
Preparation of $(Al_2O_3)_x(SiO_2)_y$ thin films using $[Al(OSiEt_3)_3]_2$ as a single-source precursor.—73-09252
Preparation of $Al_2O_3$ powders from various aluminum salts by the spray pyrolysis method.—73-09253
Preparation of $Al_2O_3$-$TiO_2$ coatings by sol-gel method and their nitridation.—73-03868
Preparation of $Al_2O_3$-$TiO_2$ nanocomposite powders.—73-09254
Preparation of $Al_2O_3$-$ZrO_2$ composites by inorganic sol-gel processing.—73-05966
Preparation of alumina ceramics with uniformly dispersed micropores.—73-16913
Preparation of alumina membranes for microfiltration.—73-02942
Preparation of alumina membranes: I.—73-13181
Preparation of alumina powder from aluminum salts by precipitation method.—73-16914
Preparation of alumina powders from bauxite by wet acid process and their utilization: III, Effects of the dispersion of aluminum hydrate gel on the sintering behavior of alumina powder.—73-09255

Preparation of alumina-fiber-type catalyst for methane combustion by sol-gel method.—73-16915
Preparation of alumina/aluminum composites by oxidation of aluminum.—73-00257
Preparation of amorphous silica-alumina particles by acid-treating spherical P-type zeolite particles crystallized from a sodium aluminosilicate gel.—73-02057
Preparation of high-purity, ultrafine $\alpha$-$Al_2O_3$ powders.—73-15930
Preparation of microporous metal membranes by two-step replication of the microstructure of anodic alumina.—73-00258
Preparation of monodispersed hydrous aluminum oxide powders.—73-02957
Preparation of porous alumina ceramics by using the gelation of ammonium alginate.—73-05979
Preparation of porous alumina ceramics by using the gelation of ammonium alginate.—73-13199
Preparation of preforms and optical fibers containing aluminum by solution-doping method.—73-00686
Preparation of seeded alumina from alkoxide: I, Powders.—73-02964
Preparation of seeded alumina from alkoxide: II, Sintering.—73-02965
Preparation of $SiO_2$-$Al_2O_3$ gels from tetraethoxysilane and aluminum chloride—a new sol-gel method using propylene oxide as a gelation promoter.—73-16935
Preparation of spherical $Al_2O_3$ particle-dispersed hydroxyapatite ceramics.—73-09269
Preparation of spherical $Al_2O_3$-particle-dispersed hydroxyapatite ceramics.—73-16936
Preparation of ZrC/$Al_2O_3$ fine composite powders by thermite reaction.—73-16944
Pressure sensitivity for particle packing of aqueous $Al_2O_3$ slurries vs interparticle potential.—73-09274
Pressureless sintering and related reaction phenomena of $Al_2O_3$-doped $B_4C$.—73-05992
Prevention of alumina deposition in submerged nozzles.—73-00840
Prevention of continuous casting submerged nozzle clogging.—73-00841
Process for formation of an aluminum oxide based layer on glass, the product thus obtained, and its use in windows incorporating a conductive layer.—73-00756
Process for preparation of alumina.—73-12396
Process for producing agglomerates from dusts.—73-12398
Process for producing catalyst composition for use in hydrodesulfurization of hydrocarbon oil and process for hydrodesulfurizing hydrocarbon oil.—73-02059
Process for the preparation of alumina agglomerates.—73-02064
Process for the preparation of an ion-conduction ceramic material.—73-01066
Process for the production of sintered material based on alpha-aluminum oxide, especially for abrasives.—73-00004
Processing and characterization of alumina (platelet)-reinforced Y-TZP (matrix) composites.—73-09500
Processing and characterization of precursor hydronium ß/ß˝-alumina ceramics.—73-09277
Processing and mechanical properties of alumina platelet-reinforced zirconia.—73-09278
Processing and microstructure development in alumina-silicon carbide intragranular particulate composites.—73-16949
Processing and properties of Y-TZP/$Al_2O_3$ composites.—73-16951
Processing of tape-cast laminates prepared from fine alumina/zirconia powders.—73-16952
Production of alumina-magnesia spinel powder using a high-frequency plasmatron.—73-16957
Production of spherical granules of alumina with controlled porous structure.—73-02982
Promoted oxidation of aluminum thin films using an alkali metal catalyst.—73-06845
Properties and application of dense silicon carbide.—73-02085
Properties of alumina ceramics having extremely fine grains.—73-09659
Properties of alumina-based coatings deposited by plasma and high-velocity combustion processes.—73-09502
Properties of alumina/Al/alumina joints produced in air atmosphere.—73-03983
Properties of ceramic implants for stomatology.—73-08522
Properties of sodium borosilicate glasses/$Al_2O_3$-sintered composites containing fluorides.—73-16579
Pyrolysis of Si-C-O fiber in alumina powder.—73-16965
Quantitative X-ray diffraction analysis of high-alumina cements.—73-00178
Quantum chemical simulation of the self-trapped hole in $\alpha$-$N_2O_3$ crystals.—73-08716
Radiation damage effects in alumina.—73-05624
Rapid prototyping of structural ceramic parts by laminated object manufacturing.—73-15748
Reaction pathway for the growth of alumina on high surface area alumina and in ultrahigh vacuum by a reaction between trimethyl aluminum and water.—73-02988
Reactive sintering of zircon and alumina/bauxite.—73-09505
Reduction behavior of $Fe^{3+}$/$Al_2O_3$ obtained from the mixed oxalate precursor and the formation of the $Fe^0$-$Al_2O_3$ metal-ceramic composite.—73-05472
Reference electrode assembly and process for constructing.—73-01067
Refractory for gas blowing for molten metal refining vessel.—73-04040
Reinforced alumina ceramic-metal bodies.—73-10345
Resistivity and microstructure of alumina ceramics added with $TiO_2$ fired in reducing atmosphere.—73-16588
Resistivity and microstructure of alumina ceramics added with $TiO_2$ fired in reducing atmosphere.—73-16589
Rheological and electrokinetic properties of $ZrO_2$-$Al_2O_3$ slurry.—73-05630
Rheological behavior of suspension and properties of green sheet—effect of compatibility between dispersant and binder.—73-02998
Rheological characteristics of aqueous alumina slurry for tape casting.—73-16974
Rheology of alumina sols.—73-13238
Role of fiber coating on SiC fiber-reinforced alumina composite.—73-05631
Role of fiber coating on SiC fiber-reinforced alumina composite.—73-13585
Role of grain size in strength variability of alumina.—73-13586
Role of material and grinding parameters in grinding of alumina fiber-reinforced aluminum alloys.—73-06025
Role of oxygen in microstructure development at solid-state diffusion-bonded Cu/$\alpha$-$Al_2O_3$ interfaces.—73-13895
Role of Zener's pinning effect on the grain growth in $Al_2O_3$-$ZrO_2$.—73-06279
Role of Zener's pinning effect on the grain growth in $Al_2O_3$-$ZrO_2$.—73-13242
Sapphire-fiber-reinforced RBAO [reaction-bonded alumina].—73-16978
Scale of microstructure effects on the impact resistance of $Al_2O_3$.—73-09668
Scanning acoustic microscopy observations of high-temperature crack-bridging mechanisms in alumina.—73-03350
Schottky barrier induced injecting contact on wide band gap semiconductors.—73-07788
Sedimentation of flocculated alumina suspensions: $\gamma$-ray measurements and comparison with model predictions.—73-09312
Selective catalytic reduction of nitric oxide with ammonia on vanadium oxide catalysts supported on titania–alumina.—73-02685
SEM studies of material damage in alumina ceramics by angular single and multiple particle impacts.—73-06280
SEM studies on alumina fiber formation through plant fiber substrates.—73-13445
Serial cosputtering of mixed Al/Zr and $Al_2O_3$/$ZrO_2$ films.—73-10274
Shaped bodies of transparent, polycrystalline alumina.—73-02067
Shear bond strength of nickel-alumina interfaces diffusion bonded by HIP.—73-13897
Si-Ti-C-O fiber addition to alumina-graphite refractories.—73-00862
SiC whisker dispersion and mechanical properties of $Al_2O_3$-SiC whisker composite.—73-13588
SiC-platelet-reinforced $Al_2O_3$ composites by free sintering of coated powders.—73-16983
Sigmoidal indentation–strength characteristics of polycrystalline alumina.—73-06517
Silica bayerite/eta alumina.—73-12402
Silica-stabilized alumina.—73-05244
Silicon nitride bodies and a process for producing the same.—73-02137
Silver-alumina solid-state bonding: influence of the work hardening of the metal.—73-03640
Silver-toughened alumina ceramics.—73-06853
Simple fabrication process of intermetallic compounds utilizing low-temperature pressure casting of alumina.—73-03641
Sintered sol-gel alumina abrasive filaments.—73-00005
Sintering and grain growth of ultrapure alumina.—73-09506
Sintering and mechanical properties of SiC-whisker/$Al_2O_3$ composites with two-layered structure.—73-06520
Sintering and mechanical properties of SiC-whisker/$Al_2O_3$ composites with two-layered structure.—73-13589
Sintering and mechanism of crystallization prevention of alumina-filled borosilicate glass.—73-13259
Sintering behavior and consolidation process for $Al_2O_3$/SiC nanocomposites.—73-06051
Sintering behavior and consolidation process for $Al_2O_3$/SiC nanocomposites.—73-13263
Sintering behavior of aluminum oxides derived from aluminum hydroxides with various morphologies.—73-09324
Sintering behavior of ultrafine ceramic particles.—73-06054
Sintering characterization of alumina powders by hot-pressing after cold cyclic compaction—densification, grain growth, and fracture toughness.—73-09326
Sintering of alumina and mullites prepared by slow hydrolysis of alkoxides: the role of the protonic species and pore topology.—73-13265
Sintering of alumina green sheet with $TiO_2$ and $Cr_2O_3$ in reducing atmosphere.—73-06057
Sintering of alumina green sheet with $TiO_2$ and $Cr_2O_3$ in reducing atmosphere.—73-16995
$SiO_2$-$Al_2O_3$ liquids: in situ study by high-temperature $^{27}Al$ NMR spectroscopy and molecular dynamics simulation.—73-02433
Sliding wear of self-mated $Al_2O_3$-SiC whisker-reinforced composites at 23–1200°C.—73-03351
Sliding-wear behavior of ceramic particle-reinforced high-speed steel obtained by powder metallurgy.—73-06855
Slip casting of alumina using porous alumina mold.—73-09331
Slip casting of alumina using porous alumina mold.—73-16998
Slip casting of low-soda alumina: I, Preparation conditions of slurry.—73-09333
Slip casting of low-soda alumina: II, Vacuum-pressure-assisted slip casting and mechanical properties of sintered body.—73-09334
Sol and powder routes to alumina–silicon carbide nanocomposites.—73-17004
Sol-gel method for preparation of specific properties of coatings on alumina alloys with anodic oxidation.—73-03887
Sol-gel-derived alumina microspheres.—73-17006
Solid lubricant for alumina.—73-13900
Solid reaction in the MgO excess regions of the system MgO-$TiO_2$-$Al_2O_3$.—73-13368
Solid superacids: the alumina–$ZrCl_4$ system.—73-12684
Solid-state bonding of single crystals of $Ni_{(111)}$/$Al_2O_{3(0001)}$.—73-10277
Solid-state reaction in the MgO excess region of the system MgO-$TiO_2$-$Al_2O_3$.—73-00866
Solubility of silica–alumina gels in different pH solutions—discussion on the hydration of slags and fly ashes in cement.—73-10158
Solution of MgO, CaO, and $TiO_2$ in $\alpha$-$Al_2O_3$.—73-05481
Sources of sintering inhibition in tape-cast aluminas.—73-09339
Spectroscopic variations of optical constant and emissivity of Pt-$Al_2O_3$ cermet thin films.—73-10278
Stability and surface energies of wetted grain boundaries in aluminum oxide.—73-06284
Stepped cup forming from alumina granula by press powder flow compaction.—73-17009
Strengthening mechanism in $Al_2O_3$/SiC particulate composites.—73-17435
Strengthening of $\alpha$-alumina-containing porcelain bodies by lamination with different compositions.—73-15933
Stress-rupture behavior of small-diameter polycrystalline alumina fibers.—73-09678
Structural change in plasma-sprayed alumina coating by laser melting: II, On pulsed mode treatment.—73-17011
Structural change in plasma-sprayed alumina coatings by laser melting: I, On continuous wave mode treatment.—73-05490
Structural evolution in $ZrO_2$-$Al_2O_3$ gels during sintering.—73-17012
Structure analysis of ß˝-alumina in syntaxy with ß-alumina by two-stage powder XRD.—73-08756
Structure and dispersion of molybdenum oxide supported on alumina and titania.—73-08758
Structure and energetics of alumina surfaces calculated from first principles.—73-05498
Structure and properties of ceramics of the system $Al_2O_3$-$ZrO_2$-$SiO_2$.—73-07224
Structure and properties of plasma-sprayed alumina coatings[—literature review].—73-02693
Structure of $Al_2O_3$-$SiO_2$ gels derived from aluminum nitrate and tetraethylorthosilicate.—73-05500
Structure of $Al_2O_3$-$SiO_2$ gels derived from aluminum nitrate and tetraethylorthosilicate.—73-12703
Structure of barium zinc aluminate glasses.—73-00416
Structure of the $\alpha$-$Al_2O_3$(1$\bar{1}$00) surfaces.—73-16339
Structure of the $Fe_2O_3$-$Al_2O_3$(0001) interface.—73-06292
Structure of the $Fe_2O_3$-$Al_2O_3$(1$\bar{1}$02) interface.—73-06293
Structure of the surface sites of ß-$Al_2O_3$ as determined by HREM, computer modeling, and ir spectroscopy of adsorbed CO.—73-13452
Strut crack formation in open cell alumina ceramics.—73-13288
Subthreshold production of cation Frenkel defects in $\alpha$-$Al_2O_3$.—73-03114

Support effects in methanol synthesis over copper-containing catalysts.—73-02698
Supported catalysts.—73-02070
Surface anisotropy in amorphous Tb-Fe/$Al_2O_3$ multilayers.—73-15371
Surface bonding of ceramic bodies.—73-00297
Surface charge density and acidic characteristics of $SO_4^{2-}$/$Al_2O_3$.—73-16607
Surface models for $\gamma$-$Al_2O_3$ from molecular dynamics simulations.—73-12707
Surface modification methodologies for polycrystalline alumina: effects on morphology and frictional coefficients.—73-17204
Surface property and strength of ground alumina ceramics.—73-09682
Surface roughness characterization of three alumina-type fibers by atomic force microscopy [AFM].—73-09515
Surface segregation of PVA during drying of a PVA–water–$Al_2O_3$ slurry.—73-13290
Surface segregation of PVA during drying of a PVA-water-$Al_2O_3$ slurry.—73-03032
Surface-free energy components of $\alpha$-alumina from thin-layer wicking.—73-16609
Synthesis and characteristics of fibrous $3CaO{\cdot}Al_2O_3{\cdot}32CaCO_3{\cdot}3H_2O$.—73-03036
Synthesis and characterization of pure and yttrium-containing alumina aerogels.—73-06079
Synthesis and investigation of aluminum oxide sols on the basis of commercial aluminum hydroxide.—73-17020
Synthesis and mechanical properties of alumina–MgO-stabilized zirconia–zircon composite.—73-06082
Synthesis and mechanical properties of alumina–MgO-stabilized zirconia-zircon composite.—73-17021
Synthesis and optical properties of ß˝-alumina single crystals doped with divalent lanthanide ions.—73-13295
Synthesis and properties of $Al_2O_3$-SiC composites from alkoxides: I, Synthesis of dispersed type $Al_2O_3$-SiC composite powders.—73-09347
Synthesis and properties of $Al_2O_3$-SiC composites from alkoxides: II, Synthesis of coated $Al_2O_3$-SiC composite powders.—73-09348
Synthesis and properties of $Al_2O_3$-SiC composites from alkoxides: III, Effect of composite powder type on the sintering characteristics and properties of $Al_2O_3$-SiC composites.—73-09349
Synthesis of beta-alumina from aluminum hydroxide and oxyhydroxide precursors.—73-03043
Synthesis of highly leachable gel-derived alumina ceramic cores.—73-17038

Synthesis of nanocrystalline alumina and alumina-zirconia composites by a combustion-assisted process.—73-17041
Synthesis of nanophase materials by electron beam evaporation.—73-17043
Taguchi design of experiment study of plasma-sprayed alumina coatings.—73-09368
Tape casting of fine alumina/zirconia powders for composite fabrication.—73-17050
Tape casting of SiC platelet-reinforced alumina.—73-09370
Temperature dependence of the elastic moduli, dilational and shear internal frictions, and acoustic wave velocity for alumina, (Y)TZP, and ß´-SiAlON ceramics.—73-09684
Temperature effects on phase composition and properties of aluminum alkoxide hydrolysis products.—73-16361
Template synthesis and optical properties of small metal particle composite materials: effects of particle shape and orientation on plasmon resonance maxima.—73-06111
Temporal characteristics of gain-switched $Ti^{3+}$:$Al_2O_3$ laser.—73-08981
Tensile creep behavior of alumina under static and cyclic loading.—73-17441
Tensile properties of alumina fibers using hot-grips.—73-17443
Tensile properties of aluminum/alumina multilayered thin films.—73-03650
Test results of alumina-spinel castable for steel ladle.—73-14628
Tetragonal-cubic inversion in unstabilized zirconia dispersed in alumina matrix.—73-16365
Textural stability of titania–alumina composite membranes.—73-09517
Thermal and hydrothermal properties and microstructure of zirconia-alumina-mullite.—73-17445
Thermal and mechanical properties of $SiC_p/Al_2O_3$ composite.—73-03366
Thermal barrier coating system with intermetallic overlay bond coat.—73-00299
Thermal behavior of alumina from aluminum alkoxide reacted with complexing agent.—73-12888
Thermal conductivity of thin amorphous alumina films.—73-05654
Thermal decomposition of hydrotalcites. An ir and NMR spectroscopy study.—73-08775
Thermal fatigue behavior of alumina ceramics by water quenching method.—73-13603
Thermal fatigue life prediction of alumina by finite difference model.—73-08989
Thermal shock and fatigue of mullite and alumina: refined analyses.—73-05663
Thermal shock behavior of Y-TZP/Y-TZP-$Al_2O_3$ composites having dual microstructure.—73-05667
Thermal shock by water quench: numerical simulation.—73-05668
Thermal shock resistance of composites of alumina and partially stabilized zirconia.—73-08990
Thermal shock resistance of high-alumina ceramics.—73-08991
Thermal spalling and resistance to slag attack in porous high-alumina ceramic (according to pore size).—73-12895
Thermal stability of gels and glass-forming regions in the $B_2O_3$-$Na_2O$-$Al_2O_3$ system.—73-12896
Thermodynamic investigation of the CaO-$Al_2O_3$-$CaSO_4$-$H_2O$ system at 50°C and 85°C.—73-10181
Thermodynamic investigation of the CaO-$Al_2O_3$-$CaSO_4$-$K_2O$-$H_2O$ system at 25°C.—73-16376
Thermomechanical and microstructural stability of Nextel 610 polycrystalline alumina fiber.—73-12334
Thermomechanical processing [TMP] and ductility enhancement of a 6061 Al-$Al_2O_3$ metal matrix composite.—73-03655
Thermomechanical properties of $Al_2O_3$-C slide plate brick.—73-10776
Ti:$Al_2O_3$ master-oscillator/power-amplifier system.—73-15210
TiC-strengthened $Al_2O_3$ by powder tailoring and doping procedures.—73-06120
TiC-strengthened $Al_2O_3$ by powder tailoring and doping procedures.—73-09378
Time-dependent strength degradation and reliability of an alumina ceramic subjected to biaxial flexure.—73-17447
Time-temperature-transformation curves [T-T-T curves] for kaolinite–α-alumina.—73-12725
Tin(IV) oxide coating of aluminum borate whiskers and alumina particles by chemical vapor deposition.—73-03062
Toughening alumina ceramic with silver inclusions.—73-03658
Toughening behavior of SiC whisker-reinforced $Al_2O_3$ ceramic tool material and its effect on tool fracture.—73-06540
Toughening of alumina matrices by the inclusion of nickel particles.—73-00272
Transformation kinetics and properties of co-continuous ceramic composites.—73-10292
Transmission electron microscopy of polished AlN with ultrafine alumina abrasive.—73-03210
Transparent glass-ceramics on $Al_2O_3$-$SiO_2$ system.—73-03896
Tribological characterization of alumina and silicon carbide under lubricated sliding.—73-17454
Tribological properties of niobium ion-implanted alumina.—73-17455
Tunable ps pulses below 200 nm by external frequency conversion of cw mode-locked Ti:$Al_2O_3$ laser radiation.—73-09002
Ultrafine alumina powders via a sol-emulsion-gel method.—73-13329
Ultrasonic attenuation study of $NH_4^+$/$H_3O^+$-$Rb^+$-ß´´-alumina.—73-06182
Use of a heated sprue in the injection molding of large ceramic sections.—73-15859
Use of coupling agents as a route to improvement of the compressibility of fine zirconia and alumina powders.—73-09383
Use of ultrasonic wave velocities to characterize $SiC_w/Al_2O_3$ composites.—73-01937
Usefulness of spark plasma sintering on densification and mechanical properties of alumina whisker/zirconia composites.—73-17069
Using diopside in the production of high-alumina ceramics.—73-02019
Variation of optical properties of leucosapphire after high temperature plastic deformation [HTPD].—73-02721
Variations of surface hardness of alumina induced by ion implantation.—73-16647
Viscoelastic effects in testing of an $Al_2O_3$ ceramic containing a glassy phase.—73-09689
Viscoelasticity in alumina ceramics at room temperature.—73-09690
Viscosity and yield stress of alumina slurries containing large concentrations of electrolyte.—73-06132
Viscosity of glasses of the BaO-$P_2O_5$-$Al_2O_3$ system at glass-transition and annealing temperatures.—73-00572
Wettability and interfacial reaction of alumina and zirconia by reactive silver-indium base alloy at mid-temperatures.—73-00276
Whisker-reinforced composites for cutting tools with improved performance.—73-05250
Work hardening behavior of alumina particulate-reinforced 2024 aluminum alloy matrix composites.—73-13911
X-ray measurement of triaxial residual phase stress in zirconia–alumina composite ceramics.—73-13609
X-ray photoelectron spectroscopy study on the electrical double layer at an $Al_2O_3$-Al interface.—73-06881
XPS study of a Cu-Al-O catalyst under $H_2$ or CO atmosphere.—73-12734
XRD, HRTEM, and FTIR study of Ca-doped $Al_2O_3$.—73-12738
Zeolite-$Al_2O_3$ membrane configuration.—73-12335

**aluminates,**
Alkoxide–hydroxide route for the preparation of γ-$LiAlO_2$-based ceramics.—73-05688
Anisotropic oxygen diffusion in hexaaluminate.—73-03075
Barium aluminate cement—its synthesis and formation kinetics.—73-13681
Cement in the $C_{11}A_7$:$CaF_2$-$C_2S$ [11CaO·7$Al_2O_3$·$CaF_2$-2CaO·$SiO_2$] system.—73-13688
Chemical composition and microstructures of sulfoaluminate cement clinker.—73-09851
Chemically induced grain-boundary migration of $MgAl_2O_4$ by ZnO.—73-13381
Cleaning the surface of $SrTiO_3$(100) and $LaAlO_3$(100) under moderate temperature condition by Bi adsorption/desorption treatment.—73-02747
Cluster spin glass ordering in diluted spinel $CoFe_{1-x}Al_{1+x}O_4$.—73-08576
Comparison of threshold energy of selectively excited YAlO$_3$:Er and YAG:Er lasers.—73-08826
Component region for the synthesis of rod-shaped ß-$LiAlO_2$ crystals.—73-02168
Continuous wave, *Q*-switched, and mode-locked operation of a laser-pumped Nd:LNA laser.—73-16428
Creep behavior of fine-grained two-phase $Al_2O_3$-$Y_3Al_5O_{12}$ materials.—73-17264
Crystal structure of holmium aluminate, $HoAlO_3$.—73-16084
Crystal structure of the chloraluminates of titanium(II), $Ti(AlCl_4)_2$, and refinement of the crystal structure of $AlCl_3$.—73-12563
Decomposition of the spinel $CuAl_2O_4$.—73-16102
Distribution of paramagnetic impurity in $LaSrAl_{1-x}Cr_xO_4$ and $YCaAl_{1-x}Cr_xO_4$ ceramics [$x$<0.15].—73-16113
$DyAlO_3$: a more promising refrigerant than $Dy_3Al_5O_{12}$.—73-01455
Electrical conductivity and mixed alkali effect in $K^+$/$Rb^+$ ß´´-$Al_2O_3$ ceramics.—73-00956
Electron nuclear double resonance [ENDOR] study of $LaMgAl_{11}O_{19}$:$Ti^{3+}$.—73-02255
Electron paramagnetic resonance and optical spectra of $Cr^{3+}$-doped YAlO$_3$.—73-16485
Fabrication and mechanical properties of $C_f$/NiAl and $SiC_w$/NiAl composites.—73-03587
Fatigue damage in SiC/CAS composites.—73-03293
Findings on blue-emitting luminophore based on (Ba, $Eu^{2+}$)Mg aluminate.—73-02275
Formation of alkoxy-derived yttrium aluminates in the $Al_2O_3$-rich region.—73-09138
Formation of CaO·10$Al_2O_3$ with the ß-alumina-type structure by means of ion exchange.—73-02277
Heating conditions to synthesize rod-shaped ß-$LiAlO_2$ crystals.—73-05838
Hydration of Sr- and Ba-bearing sulfoaluminates in the presence of sulfates.—73-06666
Influence of the native $BaAl_2O_4$ boundary layer on microstructure and properties of $YBa_2Cu_3O_{7-x}$ thin films grown on sapphire.—73-01579
Internal friction in $MgAl_2O_4$ spinel doped with gallium oxide or alumina.—73-02305
Ionic conduction in partially ion-exchanged Sr ß-alumina; $Sr_{1-x}Na_{2x}MgAl_{10}O_{17}$.—73-00985
Magnetic polaritons of a semiinfinite uniaxial antiferromagnet.—73-15337
Mechanisms at the formation of some unitary strontium and barium sulfoaluminates.—73-16212
Mechanisms at the mixed sulfoaluminate formation in the CaO-$Al_2O_3$-(Sr,Ba)$SO_4$ systems.—73-13754
Melting temperatures of the alkali-earth aluminates and their mixtures with $ZrO_2$ and $Al_2O_3$ in the atmosphere of combustion gases.—73-10741
Microstructure of epitaxial ferroelectric $YBa_2Cu_3O_{7-x}$/$Pb_{0.9}La_{0.1}$·$(Zr_{0.2}Ti_{0.8})_{0.975}O_3$-$YBa_2Cu_3O_{7-x}$ heterostructures on $LaAlO_3$ [LAO].—73-03171
Mode-locking of the 1.66-µm transition of an Er:YAlO$_3$ laser.—73-07676
Mossbauer and magnetization study of cobalt ferrite aluminates.—73-04629
NMR of $^{27}$Al in mixed $Y_xEr_{1-x}AlO_3$ crystals [$x$=1, 0.93, and 0.9].—73-16229
Phase relations in the system $Ce_2O_3$-$Al_2O_3$ in inert and reducing atmospheres.—73-16256
Preliminary study of very early hydration of superplasticized $C_3A$+gypsum by environmental SEM.—73-10090
Preparation of garnet-type $Gd_3Al_5O_{12}$ powders by an amorphous citrate process.—73-13188
Preparation of $Na_{1-x}Ti_{2+x}Al_{5-x}O_{12}$ ($x$=0.2) fiber by precursor method.—73-02959
Preparation of $Na_{1-x}Ti_{2+x}Al_{5-x}O_{12}$ [NTAO] whiskers by calcining with excess $Na_2O$.—73-02960
Preparation of $Na_{1-x}Ti_{2+x}Al_{5-x}O_{12}$ whiskers by calcining with excess $Na_2O$.—73-13196
Quarternary oxide phases $Ln_{4-x}Au_{4+x}Co_{2+x}Al_{2-x}O_{15}$: the structure of $Nd_{3.43}Ba_{4.42}Co_{2.23}Al_{1.77}O_{15}$ and $Y_2Sr_6Co_{2.08}Al_{1.92}O_{15}$.—73-02409
Second harmonic generation and sum frequency mixing of dual wavelength Nd:YAlO$_3$ laser in flux-grown KTiOPO$_4$ crystal.—73-07789
Secondary ion mass spectrometric analysis of anisotropic oxygen self-diffusion in barium hexaaluminate single crystals.—73-13367
Spectroscopic and dynamic characteristics of energy transfer of $Nd^{3+}$→$Yb^{3+}$ and $Yb^{3+}$→$Er^{3+}$ in aluminate glasses.—73-03759
Spectroscopy and scintillation properties of cerium-doped $YAlO_3$ single crystals.—73-16598
State of iron atoms and exchange interactions in solid solutions of $LaSrFe_xAl_{1-x}O_4$ and $YCaFe_xAl_{1-x}O_4$.—73-12691
Stress-induced phase transformation in the systems $(Ho_{1-x}La_x)_4Al_2O_9$ and $(Y_{1-x}La_x)_4Al_2O_9$.—73-16316
Structural evidence of water-induced relaxation of the Frenkel defect in $Na^+$ ß-alumina.—73-06176
Theory and practice of fume silica–aluminous cement interactions.—73-03545
Thermal characteristics of alexandrite fluorescence decay at high temperatures, induced by a visible laser diode emission.—73-02704
Thermoluminescence in $MgAl_2O_4$ X-ray irradiated at 90 K.—73-12723
Ultrasonic attenuation study of hydronium ß´´-alumina.—73-01040
Ultrasonic shear wave attenuation study on $Na^+$, $K^+$ ß´´-alumina.—73-01041
Upconversion and local structure of $Er^{3+}$-doped aluminate glasses.—73-03817
Upconversion dynamics of $Er^{3+}$:YAlO$_3$.—73-08787
Viscosity and elastic properties of glasses of the system BaO-$B_2O_3$-$Al_2O_3$ and CdO-$B_2O_3$-$Al_2O_3$.—73-14309
ZnO-modified high-modulus glass fibers.—73-00723

**aluminides,**
Cavitation-erosion [CE] of plasma-sprayed nickel aluminides.—73-06743
Chemical stability of titanium diboride reinforcement in nickel aluminide matrices.—73-06749
Combined mechanical alloying and thermochemical processing approach to synthesize titanium aluminides.—73-05712
Combustion synthesis of LiAl intermetallics.—73-06754
Consolidation of [SiC] fiber materials with particulate metal aluminide alloys.—73-13915
Development of titanium aluminide composites.—73-10216
Effect of mechanical alloying on γ-TiAl alloys.—73-05762
Effect of processing parameters on mechanical alloying of $Ti_3Al$-base alloys.—73-05769
Effects of reinforcement size and distribution on fracture toughness of composite nickel aluminide intermetallics.—73-00225
Environmentally compatible double coating concepts for sapphire fiber-reinforced γ-TiAl.—73-06781
Equipartition method for the analyses of two nonidentical closely separated rib waveguides.—73-14893
Fine structure analysis of mechanically alloyed titanium aluminides.—73-05808
Glass-ceramic coatings for titanium aluminides.—73-06798
Interfacial reactions of thin titanium aluminide films with $Al_2O_3$ films and with sapphire.—73-13851
Mechanical alloying [MA] of TiAl: preliminary results.—73-06818
Mechanical properties and oxidation resistance of TiC-dispersed titanium aluminide produced by mechanical alloying process.—73-13866
Point-contact spectroscopy of $LaCeAl_2$ and $LaCeB_6$ alloys.—73-08704
Reactive spray forming [REFORM] production of titanium aluminides in the tail flame of a dc plasma torch.—73-06846
Structures and properties of vacuum-plasma-sprayed [VPS] NiAl and NiAl-B.—73-09512
Thermal-fatigue properties of $Ti_3Al$-based intermetallics.—73-10288

**aluminoborate,**
Aluminum borate devitrification inhibitor in low-dielectric borosilicate glass.—73-04186
Crystalline metalloaluminum borates.—73-05211
Experimental study of xenon flash lamp pumped $Nd_xY_{1-x}Al_3(BO_3)_4$ (NYAB) *Q*-switched laser and its characteristics.—73-12801
Formation and properties of neodymium aluminoborate glasses.—73-00484

Formation of cobalt ferrites in glasses based on potassium aluminoborate systems.—73-00344
Ir absorption spectra of lead aluminoborate glasses.—73-00507
Structure of aluminoborate glasses according to Raman spectroscopy data and their properties.—73-14106

**aluminoferrites,**
Barium hexaaluminoferrites with new structural features.—73-01450
Effect of $SO_3$ and MgO on phase relations and crystal chemical state of phases in belite–aluminoferrite clinkers.—73-09917
Kinetics of aluminoferrite formation at different conditions.—73-13746
Kinetics of tricalcium aluminate and tetracalcium aluminoferrite hydration in the presence of calcium sulfate.—73-00130

**aluminophosphate,**
Adsorptive properties and stability of VPI-5, a large-pore molecular sieve.—73-08806
Anionic coordination involvement in solid-state ion-exchanged CuH-SAPO-*n* (*n*=5, 11, and 34) molecular sieves.—73-12535
Consistent molecular mechanics force field for aluminophosphates.—73-16426
Crystallization kinetics of SAPO-37.—73-05722
EPR evidence of the unusual coordinational environment for $Mo^{5+}$ in SAPO-5 molecular sieves.—73-12580
EXAFS of Cs $L_3$-edge in sodium borosilicate and aluminum phosphate glasses.—73-13984
Formation of CoAPSO-44.—73-08626
Framework topology of magnesium aluminophosphate structure type 36.—73-08631
Further studies on aluminophosphate molecular sieves: I, $AlPO_4$-$H_2$: a hydrated aluminophosphate molecular sieve.—73-12593
Hydrothermally synthesized aluminum phosphate cements.—73-06669
Ir and EPR spectra of aluminoborosilicate and aluminophosphate glasses simulating vitrified radioactive wastes.—73-01749
Modeling of structure and vibrational spectra of $AlPO_4$-5 and its silica analog SSZ-24.—73-12631
Network structure of rf-sputtered amorphous $AlPO_4$-MgO and $AlPO_4$-CaO films.—73-05439
Nitrogen incorporation in $AlPO_4$-5 molecular sieves by thermal ammonolysis.—73-08519
Optical second harmonic generation (SHG) on *p*-nitroaniline in large crystals of $AlPO_4$-5.—73-12852
Possibility of incorporating Mn(II) and Cr(III) in SAPO-34 in the presence of isopropylamine as template.—73-08706
Reversible thermal transformation in the molecular sieve $AlPO_4$-5.—73-08726
Reversible thermal transformation in the molecular sieve $AlPO_4$-5.—73-16297
Solid-state NMR and XRD study of the thermal stability of VPI-5: assignment of $^{31}P$ and $^{27}Al$ MAS NMR spectra.—73-05479
Structure and chemistry of Co in CoAPO-5 molecular sieves.—73-08757
Structure and chemistry of Co in CoAPO-5 molecular sieves.—73-16328
Structure of calcined $AlPO_4$-31: a new framework topology containing one-dimensional 12-ring pores.—73-05501
Structure of some lead aluminophosphate glasses.—73-03765
Synthesis and properties of MgAPO-5.—73-13297
Synthesis, characterization, thermal stability, acidity, and catalytic properties of large-pore MAPO-46.—73-12885
Thermal conductivity of aluminofluorophosphate glasses.—73-00555
Viscosity of glasses of the system $K_2O$-$P_2O_5$-$Al_2O_3$ in the temperature region of softening and annealing.—73-14310

**aluminosilicates,**
$^{22}Na^+$ sorption from lithium-aluminosilicate solutions with electrode glass.—73-14046
$^{27}Al$ NMR spectroscopy of CaO-$Al_2O_3$-$SiO_2$ melts and glasses.—73-13923
Aluminosilicate refractories—their quality and resistance to corrosive agents in cement and lime kilns.—73-10695
Barium aluminosilicate glass-ceramics by a sol-gel route.—73-14329
Barium aluminosilicate glasses.—73-14534
Beryllium mineral paragenesis in the beryllia/water chemical potential diagram.—73-16037
Catalyst for purifying exhaust gas.—73-02026
Ceramic container.—73-12012
Characterization and modeling of microcracking and elastic moduli changes in Nicalon/CAS composites.—73-03243
Complex investigation of crystallization of glasses in the system BaO-$Al_2O_3$-$SiO_2$.—73-13947
Computer modeling of structure and thermal expansion of ß-quartz- and keatite-type aluminosilicates.—73-02564
Control of permanent shrinking of recycled castable refractories from waste refractories of $Al_2O_3$-$SiO_2$.—73-00791
Creep anisotropy of a continuous-fiber-reinforced silicon carbide/calcium aluminosilicate composite.—73-13499
Crystal structure features of natural hydroxyl-containing cancrinite.—73-02184
Crystal structure of natural Na,Ca scapolite—intermediate member of the marialite-meyonite family.—73-02202
Crystallization characteristics of certain lithum manganese aluminosilicate glasses and the effect of adding $TiO_2$ or $ZrO_2$.—73-03719
Crystallization in a barium-containing magnesium aluminosilicate glass-ceramic—correction.—73-07113
Crystallization in glasses of the system $Na_2O$-$K_2O$-CaO-$Al_2O_3$-$SiO_2$.—73-06898
Crystallization kinetics of CaO-MgO-$Al_2O_3$-$SiO_2$ glass system using thermal analysis.—73-00314
Crystallization of sol-gel-derived barium aluminosilicate in a 2.45-GHz microwave field.—73-05725
Design of glass-ceramics.—73-03782
Dye laser-pumped $Pr^{3+}$-doped fiber laser's basic parameter investigation, cw operation, and *Q*-switched operation.—73-14159
Effect of crystal phases on the properties of sintered glass-ceramics for CaO-MgO-$Al_2O_3$-$SiO_2$ system.—73-00452
Effect of fluorine on phase separation of CaO-$Al_2O_3$-$SiO_2$ glass.—73-13966
Effect of heat treatment below the glass nucleation temperature on the crystallization of $TiO_2$-containing MgO-$Al_2O_3$-$SiO_2$ glasses.—73-03834
Effect of hydrostatic treatment of greenware and sintering profiles on the properties of ceramics in the tialite-mullite-corundum system.—73-16731
Effect of surface treatment and annealing on the surface crystallization of the MgO-$Al_2O_3$-$SiO_2$ glass.—73-14361
Effect of the addition of $TiO_2$ and $ZrO_2$ on the crystallization of calcium aluminosilicate glasses.—73-14362
Effects of rare-earth oxides and silica on sintering and microstructure of $Al_2O_3$-$ZrO_2$-$SiO_2$ (AZS)-40 brick.—73-10725
Effects of zirconia additions on the crystallization behavior of MgO-$Al_2O_3$-$SiO_2$ glass-ceramics.—73-08608
Evaluation of thermal residual stresses in SiC/MLAS and SiC/SiC composites by the microindentation push-down test.—73-03285
Evolution of interface microstructure in a dual-coated silicon carbide fiber-reinforced BMAS [Ba-Mg aluminosilicate] glass-ceramic composite.—73-09450
Formation and properties of yttrium aluminosilicate glasses.—73-00485
Gas/vapor adsorption in imogolite: a microporous tubular aluminosilicate.—73-09456
Glass-doped ceramic matrix composites.—73-03928
High-temperature behavior of salt-coated Nicalon-fiber-reinforced calcium aluminosilicate composite.—73-17342
High-temperature flexural strength of SrO-$Al_2O_3$-$2SiO_2$ glass-ceramic.—73-17345
High-temperature synthesis of $CsAlSiO_4$-ANA, a new polymorph in the system $Cs_2O$-$Al_2O_3$-$SiO_2$: I, The end member of ANA type of zeolite framework.—73-02284
Highly heat-resistant glass fiber and process for its production.—73-00736
Hot-pressing and high-temperature mechanical properties of $BaAl_2Si_2O_8$ (BAS) and $SrAl_2Si_2O_8$ (SAS).—73-09614
Indentation behavior of continuous fiber-reinforced ceramic matrix composites.—73-00502
Influence of gel formation conditions on phase changes in polymer aluminosilicate gels of mullite composition.—73-02293
Interaction of components in Li-Mg, Al-Si systems.—73-16178
Internal friction in lithium aluminosilicate glass-ceramics.—73-07040
Ir and EPR spectra of aluminoborosilicate and aluminophosphate glasses simulating vitrified radioactive wastes.—73-01749
Kinetic frictional behavior of aluminosilicate ceramics.—73-17368
Kinetics of alkali-silicate and aluminosilicate glass reactions in alkali chloride solutions: influence of surface charge.—73-10387
Low-loss rare-earth-doped single-mode fiber by sol-gel method.—73-07147
Method for treating fluoroaluminosilicate glass.—73-14551
Microporous aluminosilicate ceramic membranes.—73-05234
Microstructure and thermal properties in the RO-MgO-$Al_2O_3$-$SiO_2$ (R=Ca, Sr, Ba, Zn) glass-ceramic systems.—73-14228
Mineral ionic conductor—saponite.—73-04140
Modulated structure of lazurite from Southwestern Pamirs deposits.—73-16220
Molecular modeling of oxygen bridges in amorphous and crystalline silicates and aluminosilicates.—73-00375
New low-heat cement made with CaO-$Al_2O_3$-$SiO_2$ glass.—73-10065
New SiC-whisker-reinforced lithium aluminosilicate composite.—73-02905
Nonaqueous synthesis: iron aluminosilicates with the ZSM-48 structure.—73-13152
Nuclear fuel pellets having an aluminosilicate deposition phase.—73-04897
Nucleation in a $K_2O$-CaO-$Al_2O_3$-$SiO_2$ glass.—73-14445
Optical spectra and structural states of Ni(II) in glass-ceramic-forming glasses of the lithium aluminosilicate system.—73-00381
Particulate reinforcement of a magnesium aluminosilicate glass-ceramic.—73-00677
Phase composition, microstructure, and nucleation temperature range of zinc aluminosilicate glass-ceramics.—73-14455
Phase separation and crystallization of a CaO(MgO)-$Al_2O_3$-$SiO_2$ slag glass-ceramic by DTEM.—73-03749
Phase transformations in $SrAl_2Si_2O_8$ glass.—73-14069
Phonon sideband spectra and local structure around $Eu^{3+}$ ions in aluminosilicate glasses.—73-14070
Pollucite via low-temperature reaction of glassy frits.—73-14461
Predicting the crystallization capability of aluminosilicate glasses.—73-06954
Preparation and thermal expansion behavior of pollucite powders by sol-gel processing.—73-02940
Preparation of the LAS ceramics for heat resistance using metal alkoxide: I.—73-16940
Process for the preparation of LAS ceramic sintered bodies.—73-15955
Raman and infrared spectra of rare-earth aluminosilicate glasses.—73-10395
Raman spectroscopy study of the kinetics of transformations of titanium-containing phases in glass-ceramic-forming lithium aluminosilicate glasses activated by nickel oxide.—73-00392
Refinement of modulated crystals. Structure of kimrite.—73-02423
Resonantly enhanced optical second harmonic generator.—73-00583
Selecting aluminosilicate aggregates added to cordierite.—73-07222
Single-particle jumps and correlated ionic motions in glass-ceramics.—73-00544
Sintering and crystallization behavior of BaO-$Al_2O_3$-$SiO_2$ and BaO-ZnO-$Al_2O_3$-$SiO_2$ xerogel powders.—73-13257
Sintering characteristics in LAS ($Li_2O$-$Al_2O_3$-$SiO_2$) system.—73-06055
Sodium and silver environments and ion-exchange processes in silicate and aluminosilicate glasses.—73-06970
Solid-liquid reaction in the system $Si_3N_4$-$Y_3Al_5O_{12}$-$Y_2Si_2O_7$ under 1 MPa of nitrogen.—73-16307
Stability of interfaces in calcium aluminosilicate matrix/Nicalon SiC fiber composites.—73-09510
Structural influence of nitrogen in alkaline-earth aluminosilicate glasses: ir absorption spectroscopy.—73-10404
Structural investigation of yttrium aluminosilicate glasses using $^{29}Si$ and $^{27}Al$ magic angle spinning nuclear magnetic resonance.—73-00408
Structural transformations in a lithium aluminosilicate glass on thermal gradation crystallization.—73-00413
Structure and optical properties of one-dimensional selenium atom chain in cancrinite channels.—73-16332
Structure and phase transitions in aluminosilicate glasses and melts.—73-00415
Substituted aluminosilicate compositions and process for preparing.—73-05245
Surface modification in a 2.45-GHz microwave field.—73-14118
Surface modification of sodium aluminosilicate glasses using microwave energy: II.—73-03891
Synthesis of Al,Si-MFI-type zeolites in the presence of $F^-$ anions: structural and physicochemical characteristics.—73-08767
Synthesis of zeolite beta from nonalkaline fluoride aqueous aluminosilicate gels.—73-06102
Synthetic imogolite paracrystals.—73-06105
Thermal behavior of blended fiber products of $Al_2O_3$-$SiO_2$ system.—73-16618
Thermal degradation of polycrystalline fibers of $Al_2O_3$-$SiO_2$ system.—73-16625
Thermal expansion characteristics of Li-replaced type pollucite ($Cs_{1-x}Li_xAlSi_2O_6$) powder.—73-02708
Thermal expansion control in metal-cored glass-ceramic substrates.—73-14295
Thermal resistance strength with the formation of the zircon phase in LAS system.—73-12893
Thermomechanical fatigue [TMF] behavior of a silicon carbide fiber-reinforced calcium aluminosilicate composite.—73-03368
Ultrasonic sol/gel processing of aluminoborosilicate glass and its composite with carbon fiber reinforcement.—73-03899
Zeolite LZ-276 and process for preparing [the] same.—73-02077

**aluminum boride,**
Mechanical properties of Mg-based composites reinforced with B, $AlB_2$, and $MgB_2$.—73-13867

**aluminum luminides,**
Tunable generation of microscopic and mesoscopic step arrays on non-(100)-oriented GaAs: a new route to quantum wire structures by epitaxial growth.—73-11489

**aluminum nitride,**
AlN matrix composites fabricated via an infiltration and reaction approach.—73-12910
AlN powders for electronic substrates: relations between properties and synthesis.—73-00934
AlN thin films prepared by plasma-enhanced chemical vapor deposition.—73-12911
Aluminum nitride as a corrosion protection coating for steel: self-scaling porous electrode model.—73-00208
Aluminum nitride deposition using an AlN/Al sputter cycle technique.—73-01043
Aluminum nitride hydrolysis.—73-12913
Aluminum nitride plant to be built by Dow Chemical.—73-03378
Aluminum nitride refractory materials and methods for making the same.—73-15976
Aluminum nitride sintered body and process for preparation thereof.—73-05282
Aluminum nitride sintered body and process for producing the same.—73-05283
Aluminum nitride substrate and method for producing [the] same.—73-04187
Aluminum nitride thin-film sensor for force, acceleration, and acoustic emission sensing.—73-14769
Aluminum nitride.—73-12255
Aluminum nitride: review of synthesis methods.—73-12410
Carbothermal production of aluminum nitride.—73-09026
Carbothermal synthesis of aluminum nitride at elevated nitrogen pressures: I, Effect of process parameters on conversion rate.—73-09027
Carbothermal synthesis of aluminum nitride at elevated nitrogen pressures: II, Effect of process parameters on particle size and morphology.—73-09028
Carbothermal synthesis of aluminum nitride using sucrose.—73-16663
Ceramic-filled thermally conductive composite containing fusible semicrystalline polyamide and/or polybenzocyclobutenes for use in microelectronic applications.—73-01046

Characterization of nitrided high surface gamma-alumina powders.—73-13376
Chemical synthesis of an aluminum nitride/boron nitride nanostructured composite material.—73-16672
Cluster size determination in the chemical vapor deposition of aluminum nitride.—73-17118
Coated aluminum nitride powder and its preparation.—73-05294
Comparison of TiAlN coatings grown by unbalanced magnetron and arc bond sputtering techniques.—73-16681
Composite with anisotropy in thermal conductivity by the combination of aluminum nitride and its polytypoids.—73-14685
Continuous in-line debinding and sintering of aluminum nitride parts.—73-02753
Corrosion-resistant member for chemical apparatus using halogen series corrosive gas.—73-12359
Creep deformation of aluminum nitride at high temperature.—73-13500
Crystal growth and microstructure of polycrystalline $Ti_{1-x}Al_xN$ alloy films deposited by ultrahigh-vacuum dual-target magnetron sputtering.—73-13385
Developing AlN ceramics with high thermal conductivity.—73-12979
Development of as-fired aluminum nitride substrates with smooth surface and high thermal conductivity.—73-14687
Dislocation substructures in plastically deformed AlN.—73-09444
EELS study of oxygen diffusion in aluminum nitride.—73-06155
Effect of aluminum source on synthesis process and properties of AlN powder prepared via carbothermal reduction and nitridation.—73-09076
Effect of ball-milling time for powder mixing of the thermomechanical properties of SiC-AlN system ceramics.—73-05753
Effect of carboxylic acid adsorption on the hydrolysis and sintered properties of aluminum nitride powder.—73-13000
Effect of plasma nitriding on the properties of (Ti, Al)N coatings deposited onto hot-work steel substrates.—73-03580
Effect of polynuclear complex content on the synthesis of aluminum nitride from aluminum polynuclear complex.—73-13014
Effect of powder properties on thermal conductivity of aluminum nitride.—73-03138
Effect of powder properties on thermal conductivity of aluminum nitride.—73-12774
Effect of powder properties on thermal conductivity of aluminum nitride.—73-13016
Effect of rare-earth oxide addition on the thermal conductivity of sintered aluminum nitride.—73-02587
Effect of reactive gas mass flow on the composition and structure of AlN films deposited by reactive sputtering.—73-09093
Effect of yttria on the thermal conductivity of aluminum nitride.—73-12777
Effects of AlN nucleation layer on magnetron-sputtered indium nitride films.—73-08840
Effects of creep at room temperature in ceramics during indentation.—73-09586
Effects of transition-metal additions on the properties of AlN.—73-16469
Electrical and thermal conductivity of AlN ceramics doped with beryllium and oxygen.—73-08851
Electron density distribution in AlN from powder X-ray diffraction data by the maximum-entropy method.—73-05389
Fabrication and characterization of InN and InAlN crystalline thin films by microwave-excited metallorganic vapor phase epitaxy.—73-14904
Fabrication and properties of AlN-SiC whisker composites.—73-09126
Formation of aluminum nitride by intensified plasma ion nitriding.—73-00235
Fracture toughness of ceramics in the AlN-SiC system.—73-17335
FTIR characterization of an AlN surface.—73-13399
Growth of AlN on GaAs(110) by reactive molecular beam deposition.—73-07553
Heat conductive colored aluminum nitride sintered body.—73-12467
Heat-conductive colored aluminum nitride sintered body and method of preparing the same.—73-12468
High-temperature oxidation resistance of SiC whisker-reinforced AlN composite.—73-06308
Hot-pressed BN-AlN ceramic composites with high thermal conductivity: III.—73-16821
In situ measurements of film stress in AlN sputtered onto moving substrates.—73-01906
Increasing AlN thermal conductivity via predensification treatment.—73-12475
Indirect-bonded metallization of aluminum nitride.—73-00979
Influence of carbon source on the synthesis of AlN powder from aluminum polynuclear complexes.—73-02867
Influence of the plasma on substrate heating during low-frequency reactive sputtering of AlN.—73-16843
Infrared and morphological studies of hydrogenated AlN thin films.—73-13403
Joining of AlN plate and composite of the system Al-AlN using all ultrafine particle.—73-03612
Measurement of intrinsic stresses during growth of aluminum nitride thin films by reactive sputter deposition.—73-09200
Mechanical and thermal properties of SiC-AlN ceramics with modulated texture.—73-17377
Mechanical properties of TiN/AlON composites.—73-09643
Mechanical strength of ultrafine Al-AlN composites produced by a combined method of plasma-alloy reaction, spray deposition, and hot-pressing.—73-06821
Metal matrix composite which utilizes a barrier.—73-10322
Method for aqueous processing of AlN and compositions therefrom.—73-02107
Method for fabrication of a carrier body of aluminum nitride.—73-12482
Method for forming metallized layer on an aluminum nitride sintered body.—73-10324
Method of making moisture-resistant aluminum nitride powder and powder produced thereby.—73-02114
Method of manufacturing aluminum nitride structure with anisotropic properties.—73-12496
Method of protecting aluminum nitride circuit substrates during electroless plating using a surface oxidation treatment.—73-11037
Microstructural features related to corrosion initiation in titanium-aluminum nitride coated steel.—73-10254
Microstructure and mechanical properties of SiC-AlN ceramics after phase separation treatment.—73-09483
Microstructure and mechanical properties of SiC-AlN ceramics after phase separation treatment.—73-17158
Minimization of binder content for production of injection-molded aluminum nitride parts.—73-09211
Moisture-resistant aluminum nitride powder and methods of making and using.—73-05320
Morphology and crystallography of aluminum nitride whiskers.—73-08670
Nanocrystalline aluminum nitride: growth by sputter deposition, optical absorption, and corrosion protection behavior.—73-12436
Novel consolidation method for engineered structural materials.—73-05935
Optical characterization of AlGaN-GaN-AlGaN quantum wells.—73-16553
Optical semiconductor device.—73-11537
Oxidation behavior and flexural strength of aluminum nitride exposed to air at elevated temperatures [≤100 h].—73-09531
Oxidation of AlN matrix composites containing discrete SiC whiskers.—73-17232
Oxidation of sintered aluminum nitride by oxygen and water vapor.—73-03228
Oxidation of sintered aluminum nitride by oxygen and water vapor.—73-13485
Oxides as sintering aids in aluminum nitride ceramics.—73-02916
Oxygen and hydrogen effects on the chemical vapor deposition of aluminum nitride films.—73-05942
Oxygen transport in aluminum nitride substrates.—73-17091
Phase separation and toughening of SiC-AlN solid-solution ceramics.—73-09236
Phonon scattering and thermal conduction mechanisms of sintered aluminum nitride ceramics.—73-08949
Photochemical growth of GaN and AlN on sapphire(0001) and GaAs(100).—73-13162
Piezoelectric thin films.—73-01425
Plasma sintering temperature for $Y_2O_3$-doped AlN.—73-02925
Plasma sintering temperature for $Y_2O_3$-doped AlN.—73-13165
Polymer precursors for aluminum nitride.—73-12505
Preparation and properties of polycrystalline SiC-AlN solid solutions.—73-15111
Preparation and sintering of aluminum nitride suitable for electronic substrate purposes.—73-07352
Preparation of aluminum nitride/aluminum composites by nitridation of aluminum.—73-13884
Preparation of AlN powders by nitriding of aluminum chips.—73-16912
Preparation of aluminum nitride from poly(isopropyliminoalane).—73-02943
Preparation of aluminum nitride from poly(isopropyliminoalane).—73-13182
Preparation of aluminum nitride using slightly oxidized Al powders.—73-02944
Preparation of aluminum nitride using slightly oxidized Al powders.—73-13183
Preparation of aluminum nitride/aluminum composites by nitridation of aluminum.—73-06841
Preparation of nonoxidizing abrasive by sol-gel method.—73-09767
Pressure-induced rock salt phase of aluminum nitride: a metastable structure at ambient condition.—73-08713
Pressureless sintering of aluminum nitride in the presence of yttrium-containing additives: relationships between microstructure, thermal conductivity, and oxygen content.—73-13214
Process for depositing aluminum nitride (AlN) using nitrogen plasma sputtering.—73-04228
Process for producing aluminum nitride sintered body.—73-02125
Process for producing an aluminum nitride sintered product.—73-16012
Process for producing small particles of aluminum nitride and particles so introduced.—73-02126
Process for sintering aluminum nitride to a high thermal conductivity and resultant sintered bodies.—73-16014
Properties of aluminum nitride powder synthesized by low-pressure chemical vapor deposition [LPCVD].—73-09283
Properties of reactively dc magnetron-sputtered AlN thin films.—73-05622
Rapid process for manufacturing aluminum nitride powder.—73-06007
Reaction between AlN and metal thin films during high-temperature annealing.—73-13889
Reaction between ruthenium dioxide and aluminum nitride in resistor pastes.—73-14727
Reaction processing of AlN/$B_4C$ composites.—73-05334
Reaction-formed processes for AlN/Al ceramic composites.—73-13892
Reactions between molten aluminum and pyrolytic boron nitride crucibles.—73-11413
Reactive sputtering model applied to AlN.—73-02993
Real-time stress measurements and elastic constant of aluminum nitride thin films on Si(111).—73-08962
Refractory materials consisting of grains bonded by a binding phase based on aluminum nitride containing boron nitride and/or graphite particles and process for their production.—73-10787
Rheological properties of plastic aluminum nitride mixes containing anhydrous binders.—73-02999
Silicon carbide bodies having high toughness and fracture resistance and method of making [the] same.—73-12519
Silicon-filled aluminum polymer precursors to SiC-AlN ceramics.—73-05339
Sintered body of aluminum nitride.—73-04233
Sintered body of aluminum nitride.—73-12526
Sintering and characterization of fully dense aluminum nitride ceramics.—73-09323
Sintering and thermal characterization of cordierite–aluminum nitride composites.—73-13261
Spark plug insulator and a method of sintering.—73-11053
Stability of AlN-SiC whisker composites containing sintering aids.—73-17008
Structural and electrical properties of reactively sputtered InN thin films on AlN-buffered (00.1) sapphire substrates: dependence on buffer and film growth temperatures and thicknesses.—73-08971
Structural characteristics of (AlN+$Y_2O_3$) ceramics.—73-13450
Structure evolution in thermoplastic slips based on aluminum nitride.—73-17014
Surface composition of AlN powders studied by X-ray photoelectron spectroscopy and Bremestrahlung-excited Auger electron spectroscopy.—73-16345
Synthesis of AlN by direct nitridation of Al alloys.—73-17029
Synthesis of AlN powder by carbothermal reduction–nitridation method: effect of additives on reaction rate.—73-06088
Synthesis of AlN powder by carbothermal reduction-nitridation method: effect of additives on reaction rate.—73-17030
Synthesis of AlN powder from $Al_2(SO_4)_3{\cdot}18H_2O$: II, Deoxidation effect.—73-03041
Synthesis of polycrystalline cubic boron nitride.—73-05346
Synthesis of polycrystalline cubic boron nitride.—73-16020
Temperature-programmed desorption (TPD) evaluation of aluminum nitride powder surfaces produced by different manufacturing processes.—73-17054
Thermal conductivity of aluminum nitride ceramics.—73-02706
Thermal properties of AlN sintered at lower temperature with additives.—73-02710
Thermally conducting adhesive containing aluminum nitride.—73-12530
Thermogravimetric determination of carbon, nitrogen, and oxygen in aluminum nitride.—73-15855
Thermoset polymeric precursor for aluminum nitride.—73-05347
Thick-film paste compositions for use with an aluminum nitride substrate.—73-10416
Thin AlN films for piezolayer-field effect transistor applications.—73-04574
Time dependence of AlN densification by plasma sintering.—73-06121
Time dependence of AlN densification by plasma sintering.—73-13325
Titanium and tantalum coatings on aluminum nitride.—73-10289
Transmission electron microscopy of polished AlN with ultrafine alumina abrasive.—73-03210
Transmission electron microscopy of polished AlN with ultrafine alumina abrasive.—73-13462
Transmission electron microscopy of surface damages resulting from wet polishing in a polycrystalline aluminum nitride substrate.—73-03211
Wetting properties of AlN with electrode metals and their interfaces.—73-13909

**aluminum titanate,**
Aluminum titanate as a material in relation to texture problems.—73-10696
Aluminum titanate ceramics: I, Influence of $Al_2O_3$ on course of synthesis and on $Al_2TiO_5$ microstructure.—73-05689
Aluminum titanate ceramics: II, Influence of MgO and its method of introduction on stability and mechanical properties of $Al_2TiO_5$.—73-09542
Ceramic port liners.—73-05204
Ceramics based on aluminum titanate, process for their production, and their use.—73-12351
Cordierite–aluminum titanate honeycomb ceramics.—73-08508
Effect of the microstructural features on the stability of aluminum titanate.—73-03139
Effects of additives on the bending strength and heat shock resistance of sintered bodies of stabilized aluminum titanate.—73-13514
Ferroelectric aluminotitanobarium materials with modifying additives.—73-01411
Formation region of K-Al priderite ($K_xAl_yTi_{8-y}O_{16}$).—73-12587
High-temperature-stabilized mullite-aluminum titanate.—73-12371
Microstructures and mechanical properties of $TiO_2$-doped alumina ceramics owing to decomposition of formed $Al_2TiO_5$.—73-17173
Preparation of $Na_{1-x}Ti_{2+x}Al_{5-x}O_{12}$ (x=0.2) fiber by precursor method.—73-13195
Reduction in thermal conductivity of reaction-bonded $Si_3N_4$

by addition of a binary compound: I, Fabrication and evaluation of $Al_2TiO_5$-added composite.—73-15971
Sinterability of $Al_2TiO_5$ powder synthesized by homogeneous precipitation technique.—73-16990
Thermal and mechanical properties of aluminum titanate–mullite composites: III, Effects of aluminum titanate particle size.—73-06116
Thermal and mechanical properties of aluminum titanate–mullite composites: III, Effects of aluminum titanate particle size.—73-13322

**aluminum zirconium silicate,**
Analysis of gases evolved by AZS refractories and by refractory/glass melt reactions. Techniques and results. Contribution to the bubble-forming mechanism of AZS material.—73-10697
Control of the internal structure of electromelted blocks by ultrasonic test on transmission.—73-12121
Thermal stress analysis of fused-cast AZS refractories during production: I, Industrial study.—73-10774
Thermal stress analysis of fused-cast AZS refractories during production: II, Development of thermoelastic stress model.—73-10775

**aluminum,**
$L_6$-$X_6$ intervalley scattering time and deformation potential for $Al_{0.6}Ga_{0.4}As$ as determined by fs time-resolved ir absorption spectroscopy.—73-11289
Γ-$X_c$ mixing in GaAs/AlAs superlattices of type II.—73-01172
Γ-X mixing effects on photoluminescence intensity in GaAs/AlAs type-II superlattices.—73-14936
Γ-X-Γ electron transfer in mixed type I–type II GaAs/AlAs quantum well structures.—73-01173
2-D nonisothermal finite element simulation of laser diodes.—73-15220
600-mW cw single-mode GaAlAs triple quantum well laser with a new index-guided structure.—73-11447
Abrasive wear of sintered aluminum alloy and its composite containing SiC particles.—73-03559
Al/TiC composites produced by melt infiltration.—73-13796
ALON and its composite ceramics.—73-05258
ALON and its composite ceramics.—73-12912
Alteration of electron-electron interaction effects in metal-insulator-metal trilayers.—73-14679
Alumina/aluminum co-continuous ceramic composite (C4) materials produced by solid/liquid displacement reactions: processing kinetics and microstructures.—73-13797
Alumina/aluminum composites formed by the directed oxidation of aluminum using magnesia as a surface dopant.—73-10197
Alumina/aluminum composites formed by the directed oxidation of aluminum using sodium hydroxide as a surface dopant.—73-10198
Aluminum alloy wetting by lead glasses with additives preventing lead reduction.—73-00434
Aluminum metal matrix composites.—73-10300
Aluminum substitution in the glass system $0.33[(1-x)P_2S_5{:}xAl_2S_3]/0.67Li_2S$ [$0 \le x \le 0.5$].—73-00935
Aluminum zoning in ZSM-5 as revealed by selective silica removal.—73-12914
Analysis of the high-temperature characteristics of InGaAs-AlGaAs strained quantum-well lasers.—73-07379
Analytical solution of subbands and absorption coefficients of AlGaAs-GaAs hyperbolic quantum wells.—73-14771
Angle-resolved photoemission and band structure of the alloy $Al_{0.5}Ga_{0.5}As$ compared to that of the superlattice $[(AlAs)_2/(GaAs)_2]_{10}$.—73-04239
Anomalous Andreev conductance in InAs-AlSb quantum wells with Nb electrodes.—73-07380
Are there Tamm-state donors at the InAs-AlSb quantum well interface.—73-07383
Aspects of interface modes and LO eigenmodes in GaAs/AlAs quantum wells.—73-07384
Atomic layer epitaxy of AlAs and $(AlAs)_n(GaAs)_m$.—73-04246
Atomic layer epitaxy of AlAs and $Al_xGa_{1-x}As$ for device application.—73-04247
Atomic model for hydrogen passivation of DX centers in GaAs and $Al_xGa_{1-x}As$ alloys.—73-11076
Atomic scale survey of III-V epitaxial interfaces.—73-07388
Atomic structure of Al-GaAs(110) interfaces.—73-08554
Ballistic and elastic mean free paths determined by magnetic electron focusing effect in GaAs/AlGaAs.—73-04250
Band offset determination in parabolic and triangular quantum wells of GaAs/AlGaAs and GaInAs/AlInAs.—73-11081
Batch fabrication and operation of GaAs-$Al_xGa_{1-x}As$ FET self-electrooptic effect device (FET-SEED) smart Pixel arrays.—73-14783
Behavior of Al on microstructure and properties of MgO-C-Al refractories.—73-03992
Behavior of Al on microstructure and properties of MgO-C-Al refractories.—73-14573
Behavior of alumina particle-reinforced 2618 aluminum.—73-09545
Binary AlAs/GaAs versus ternary GaAlAs/GaAs interfaces: a dramatic difference of perfection.—73-07393
Binding energies of Wannier excitons in GaAs-$Ga_{1-x}Al_xAs$ quantum well structures.—73-14785
Boron carbide-aluminum cermets having microstructures tailored by a post-densification heat treatment.—73-10301
Bridging THz frequency gaps in the near ir by coherent four-wave mixing in GaAlAs laser diodes.—73-01085
Bulk GaAlAs mirror as a saturable absorber for subpicosecond pulse generation around 835 nm.—73-01086
Buried stripe AlGaAs heterolasers fabricated by one-stage LPE.—73-01087
Calculation of alloy scattering relaxation time for ternary III-V and II-VI semiconductors.—73-14790
Calculation of the Schottky barrier height at the Al/GaAs(001) heterojunction: effect of interfacial atomic relaxations.—73-04256
Calculation of the X-valley intersubband optical transition linewidth in [111] grown AlAs/(GaAl)As quantum wells.—73-04257
Capacitance-voltage characteristics of selectively doped heterostructures containing deep centers.—73-01090
Capacitor discharge and flash welding of SiC-reinforced high-temperature Al alloys.—73-00212
Casting defects and properties of cast A356 aluminum alloy reinforced with SiC particles.—73-06742
Cathodic phenomena in aluminum electrowinning.—73-07285
Characteristics of modulation-doped quantum well lasers grown by molecular beam epitaxy.—73-11099
Characterization of GaAs/$Ga_{1-x}Al_xAs$ multilayer systems by ir spectroscopy at normal incidence.—73-14801
Characterization of the surface-acoustic-wave-induced potential in a GaAs/AlGaAs heterostructure.—73-04267
Chemical states of implanted aluminum ions in silica and silicon ions in alumina.—73-16053
Collective intersubband excitation in a *p*-doped GaAs/AlGaAs multiple quantum well.—73-01105
Coloring aluminum flakes.—73-03678
Comparison of *pnp* and *npn* InGaAlAs/InGaAs heterojunction bipolar transistors [HBT's].—73-11112
Comparison of iron and aluminum silicates with the ton topology.—73-12554
Confined-to-propagating transition of LO phonons in GaAs/$Al_xGa_{1-x}As$ superlattices observed by ps Raman scattering.—73-07422
Correlation of interface chemistry, barrier height, and step density for Al on vicinal GaAs(100) surfaces.—73-01112
Cryogenic and high-temperature operation of $Al_{0.52}In_{0.48}P$/-$In_{0.2}Ga_{0.8}As$ high electron mobility transistors [HEMT's].—73-11127
Crystal structure of α-$Li_2{}_5Al_{0.5}SiO_4$.—73-02185
Crystal structure of aluminum-calcium ferrite phase with variable composition of $CaFe_3AlO_7$ type.—73-02188
Current-induced corrections to the effective dielectric constant of inhomogeneous semiconductor alloys.—73-14821
CVD SiC/Al composites produced by a vacuum suction casting process.—73-00216
Cyclotron-resonance-induced negative photoconductivity in GaAs/$Al_xGa_{1-x}As$ quantum wells.—73-14822
Damage in aligned-fiber SiC/Al quantified using a laboratory X-ray tomographic microscope.—73-00217
Damage mechanisms under tensile and fatigue loading of continuous-fiber-reinforced metal-matrix composites.—73-03259
Deep levels and reduction in the conductance of a direct selectively doped heterostructure on application of a triggering voltage pulse to the gate.—73-14825
Degradation mechanism of GaAs/AlGaAs quantum well lasers.—73-07440
Dental material in powder form, process for its preparation and use.—73-03916
Dependence of the radiation stability of the intensity of luminescence emitted by solid solutions of III-V compounds on their composition.—73-14829
Design of an apparatus for aluminum hydroxide hydraulic separation.—73-15785
Detection of overtone vibration spectrum of water vapor by AlGaAs diode laser.—73-11134
Development of aluminobelitic colored clinkers.—73-09889
Dielectric function of GaAs/AlAs superlattices grown on GaAs substrates with different orientation.—73-14833
Difference frequency Raman scattering and confined optical phonons in ultrashort-period $(GaAs)_n/(AlAs)_n$ superlattices.—73-01126
Differences in Si doping efficiency in tertiarybutylarsine, monoethylarsine, and arsine for GaAs and AlGaAs grown by MOVPE.—73-14834
Direct determination of impact ionization rates near threshold in $Al_{0.9}Ga_{0.1}As$ and GaAs using molecular beam epitaxially grown GaAs/$Al_{0.9}Ga_{0.1}As$ structures and soft X-ray photoemission.—73-07447
Direct mapping [by STM] of electronic structure across $Al_{0.3}Ga_{0.7}As$/GaAs heterojunctions: band offsets, asymmetrical transition widths, and multiple-valley band structures.—73-14836
Direct measurement of heavy-hole exciton transport in type-II GaAs/AlAs superlattices.—73-11142
Direct observation of hot electron distribution function in GaAs/AlGaAs heterostructures.—73-14837
Directed oxidation of Al alloy into sintered $Al_2O_3$.—73-06771
Dislocations in an AlGaAs/GaAs superlattice.—73-04283
Dopant incorporation in GaAs and AlGaAs grown by MOMBE for high-speed devices.—73-14841
Double barrier resonant tunneling device with selectively applied field in the well.—73-06154
Drift leakage current in AlGaInP quantum well lasers.—73-14843
Dry etching of GaAs and AlGaAs by $Cl_2$ in molecular beam epitaxy system.—73-11147
DX centers in $Al_{0.34}Ga_{0.66}As$ amorphous thin films.—73-14845
Dynamics characteristics of high-power pulses generated in GaAs/AlGaAs superluminescent diodes.—73-01132
Effect of Γ-χ mixing on electron tunneling times in GaAs/AlAs double barrier heterostructures.—73-07460
Effect of aluminum addition on the combustion reaction of titanium and carbon to form TiC.—73-16723
Effect of aluminum doping on thermoelectric power of sintered SiC.—73-02576
Effect of electron cyclotron resonance generated hydrogen plasmas on carbon incorporation and interfacial quality of GaAs and AlGaAs grown by metallorganic molecular beam epitaxy.—73-07463
Effect of heat treatment on the microstructure of near-γ-TiAl powder alloys.—73-06773
Effect of interface roughness and scattering on the performance of AlAs/InGaAs resonant tunneling diodes.—73-11157
Effect of interface roughness on nonlinear vertical transport in GaAs/AlAs superlattices.—73-07466
Effect of internal stresses on the first stages of the cyclic deformation of an $SiC_p$/Al-6061 composite.—73-13827
Effect of microstructure on the fracture mechanisms of SiC/Al composites obtained by dynamic compaction.—73-09446
Effect of pore size on the infiltration kinetics of aluminum in titanium carbide preforms.—73-06775
Effect of rare-earth ions on the thermal stability of $AlF_3$-based glasses.—73-07016
Effect of Si delta doping and growth temperature on the *I*(*V*) characteristics of molecular beam epitaxially grown GaAs/(AlGa)As resonant tunneling devices.—73-11162
Effect of SiC particles on age-hardening and mechanical properties of aluminum alloys.—73-09580
Effect of stoichiometry of magnesium aluminum spinel on possibility of hole localization.—73-16123
Effect of temperature on stress-induced open failure in aluminum interconnects of LSI's.—73-10223
Effect of TiN anneal ambient on the microstructure and electromigration performance of Al-based alloys.—73-03583
Effects of Al/P composition ratio on the crystallization of $MgO$-$CaO$-$Al_2O_3$-$SiO_2$-$P_2O_5$ bioglass-ceramic system.—73-13970
Effects of aluminum doping upon color formation in zinc oxide powders.—73-13026
Effects of the substrate misorientation on the excitonic transition properties in GaAs/AlGaAs superlattices.—73-07476
Elastic constant $C_{11}$ of $Al_xGa_{1-x}As$ determined by near-ir Brillouin scattering.—73-14865
Electric-field-induced ultrafast intersubband transitions in large GaAs-AlAs quantum wells via electron-interface-phonon interaction.—73-01142
Electrical and optical properties of ion-beam-sputtered ZnO:Al films as a function of film thickness.—73-08849
Electrical characteristics of low-temperature $Al_{0.3}Ga_{0.7}As$.—73-14867
Electrical conductivity of alumina/aluminum composites synthesized by directed metal oxidation.—73-13830
Electrical properties of DX centers in heavily Se-doped $Al_xGa_{1-x}As$.—73-01147
Electron minibands in $(GaAs)_n(AlAs)_m$ superlattices with even and odd *M*.—73-14880
Energy spectrum of 2-D electrons and doublet structure of cyclotron line in GaAs-GaAlAs heterojunctions in tilted magnetic field.—73-01158
Evidence for substitutional-interstitial defect motion leading to DX behavior by donors in $Al_xGa_{1-x}As$.—73-07512
Evidence of interaction between two DX centers in *n*-type AlGaAs from RDLTS and temperature-dependent pulse-width DLTS measurements.—73-04333
Excess currents as a result of trap-assisted tunneling in double barrier resonant tunneling diodes.—73-07515
Exchange cleavage of excitonic levels in type-I and type-II superlattices.—73-11201
Exciton photoluminescence [PL] of surface quantum wells in a GaAs/AlGaAs.—73-11202
Exciton states in GaAs/AlGaAs Bragg confining structures studied by resonant Raman scattering.—73-14899
Exciton transport and localization in type-II GaAs/AlAs superlattices.—73-11204
Excitons and electron-phonon interaction in $In_{0.52}Ga_{0.18}Al_{0.3}As$.—73-01162
Experimental observation of persistent currents in a GaAs-AlGaAs single loop.—73-14903
Fabrication of nanostructures with multilevel architecture.—73-11209
Fabrication techniques and characteristics of Al-$SiO_2$ laminated optical parameters.—73-13836
Fatigue and fracture toughness of aluminum alloys reinforced with SiC and alumina particles.—73-03286
Fatigue behavior of a Saffil-reinforced aluminum alloy (AA6061).—73-03287
Fatigue damage development in $Al_2O_3$/Al composites.—73-03291
Fe and Ti implants in $In_{0.52}Al_{0.48}As$.—73-11211
Feasibility of formation of $In_{0.52}Al_{0.48}As$ films isoperiodic with the InP substrate by LPE at low temperature (≈650°C).—73-11212
Features of defect formation in active region of GaAlAs/GaAs epitaxial heterostructures for solar cells under alternating heat effects.—73-03094
Features of twinning in berlinite crystals.—73-16151
Field effect on the deep levels and DX centers in $Al_xGa_{1-x}As$/GaAs and $In_xGa_{1-x}As$/GaAs.—73-04343
Finite superlattice with the embedded quantum well.—73-07529
First-principles calculations of many-bond band-gap narrowing at an Al/GaAs(110) interface.—73-14928
Formation of Ti-Al-$ZrO_2$ film on the surface of mechanical alloying ball.—73-06794
Formation of Ti-Al-$ZrO_2$ film on the surface of mechanical alloying ball.—73-16794
Formation region of K-Al priderite ($K_xAl_xTi_{8-x}O_{16}$).—73-05405
Four-channel ridge waveguide quantum well wavelength division demultiplexing detector and its optimization.—73-07538
Fracture toughness evaluation of 2040-Al/$Al_2O_3$ particulate composites by instrumented impact.—73-03300
Fusion of silicon carbide products with aluminum during the siliconizing (firing) process.—73-03593

GaAs/AlGaAs atomic layer epitaxy in a commercial MOCVD reactor.—73-04344

GaAs/AlGaAs first-order gratings fabricated with electron beam lithography and very narrow linewidth long cavity DBR laser diodes.—73-14933

Galling in aluminum alloys and Duralcan aluminum matrix composites.—73-06797

Giant electroleochroism in GaAs-(Al,Ga)As heterostructures: the quantum-well Pockels' effect.—73-07547

Ground-state energy of the shallow bound polaron in ternary mixed crystal.—73-01178

Growth and characterization of $Al_xGa_{1-x}As$ Bragg reflectors by LP-MOCVD.—73-14944

Growth and properties of AlInAs-GaInAs alloys and quantum wells on (110)InP.—73-11227

Growth mechanisms of AlGaAs on terraced substrates by low-pressure MOVPE.—73-14949

Growth of *p*- and *n*-type GaAs/(AlGa)As double barrier resonant tunneling devices on (311)A and (111)B substrate orientations.—73-07551

Growth of $Al_xGa_{1-x}As$ by metallorganic chemical vapor deposition using trimethylgallium and trimethylamine alane.—73-11231

Growth of AlGaAs and AlGaAs/GaAs heterostructures on misoriented (110)GaAs and a normal-incidence type-II AlAs/AlGaAs quantum well infrared photodetector.—73-11232

Growth of high-quality AlGaAs/GaAs heterostructures by molecular beam epitaxy for photonic and electronic device applications.—73-14951

Growth temperature and annealing effects on deep traps of $In_{0.52}Al_{0.48}As$ grown by molecular beam epitaxy.—73-11237

Heat treatment and mechanical properties of aluminum alloy CW67/SiC composites.—73-09609

Heterostructure with 2-D electrons as a Hall sensor.—73-01183

High excitation effects in type II GaAs/AlAs superlattices.—73-01184

High-field filling of deep levels in heterostructure AlGaAs/GaAs FET's with modulated doping.—73-07560

High-performance double pulse doped pseudomorphic AlGaAs/InGaAs transistors grown by molecular beam epitaxy.—73-07563

High-performance heterojunction bipolar transistor [HBT] grown by molecular beam epitaxy using novel growth method.—73-11245

High-power individually addressable monolithic four-beam array of GaAlAs window diffusion stripe lasers.—73-01185

High-speed joining of aluminum metal matrix composites using continuous wave and pulsed lasers.—73-00239

High-thermal-expansion $NaAlSiO_4$ ceramics.—73-13089

High-thermal-expansion sealing glass.—73-03933

Highly conductive and transparent ZnO:Al thin films prepared on high-temperature substrates by dc magnetron sputtering.—73-10956

Hydroabrasive erosion characteristics of 30 vol% $SiC_p$/6061-T6-Al composite at shallow impact angles.—73-06802

Hydrogenation of GaAs covered by GaAlAs and subgrain boundary passivation.—73-11255

ICP sintering of attrition-milled $Al_2O_3$-5 wt% Al precursor: effect of power input and gas pressure.—73-16829

Impact of surface processing on Al/GaAs(100) interface states.—73-04361

Improved optical properties of low-temperature molecular beam epitaxially grown AlGaAs by In incorporation.—73-11258

In-plane transport of excitons in quantum well structures.—73-14976

Influence of heat-treatment conditions on the properties of MgO-C bricks containing aluminum.—73-17359

Influence of the desorption and growth temperatures on the crystalline quality of molecular beam epitaxy InAlAs layers.—73-07603

Influence of the thermally induced plasticity and residual stresses on the deformation of SiC/Al composites.—73-03602

Influence of thermomechanical processing on the tensile and fatigue properties of an SiC-particle-reinforced aluminum alloy.—73-06809

Interacting edge states in quantum wires.—73-14995

Interatomic interactions and electronic properties of NaCl-type $Ti_xAl_{1-x}N_y$.—73-12609

Interface roughness from Γ and χ luminescence in type II GaAs/AlAs superlattices with composition gradient.—73-01220

Interface sharpness during the initial stages of growth of thin, short-period III-V superlattices.—73-04372

Interface states and the transport of two-dimensional interface excitons in AlGaAs/GaAs structures.—73-07614

Interfaces in GaAs/AlAs: perfection and applications.—73-07616

Interfacial atomic composition and Schottky barrier heights at the Al/GaAs(001) interface.—73-11282

Interfacial reactions in epitaxial $Al/Ti_{1-x}Al_xN$ ($0 \le x \le 0.2$) model diffusion-barrier structures.—73-06165

Intervalley scattering in indirect gap $Al_{0.48}Ga_{0.52}As$ alloy.—73-04377

Ion beam etching of GaAs and GaAs/AlGaAs heterostructure probed in real time by spectroscopic ellipsometry.—73-01222

Ir photoconductivity and luminescence of quantum wells in multilayer GaAs/AlGaAs heterostructures.—73-11287

Kinetics of the reduction of carbon/alumina powder mixture in a flowing nitrogen stream.—73-13112

Laser surface treatment of aluminum 2024 with SiC powder injection: microstructural study and wear behavior.—73-13861

Lateral *p-n* junctions between quasi-two-dimensional electron and hole systems at corrugated GaAs/AlGaAs interfaces.—73-07634

Lateral transport in GaAs-(Al,Ga)As superlattices investigated by transient grating measurements.—73-01229

Lattice location and photoluminescence of Er in GaAs and $Al_{0.5}Ga_{0.5}As$.—73-04380

Local mechanical stability of the aluminum/carbon (amorphous) and aluminum/$SiO_2$ (amorphous) interface at extrinsic dislocations.—73-00248

Long-wavelength $GaAs/Al_xGa_{1-x}As$ quantum well infrared photodetectors grown using metallorganic chemical vapor deposition.—73-15014

Low-growth-temperature AlGaAs current blocking layers for use in surface normal optoelectronic devices.—73-11295

Low-temperature growth of AlGaP and GaP on Si substrates by atomic layer epitaxy.—73-11297

Low-temperature preparation of transparent-conducting ZnO:Al thin films by chemical beam deposition.—73-10248

Luminescence study of the intra-4*f* emissions from GaAs:(Er+O) and $Al_xGa_{1-x}As$:(Er+O).—73-04394

Magnetic field enhancement of Raman scattering on folded acoustic phonons in GaAs-AlGaAs superlattice.—73-07648

Magnetic-field-induced saddle points in GaAs/AlAs short period superlattices.—73-07653

Magnetooptical waveguides of aluminum garnet.—73-01490

Magnetotunneling in the *n*-type GaAs/AlGaAs wide-well double barrier structure under transverse high magntic fields.—73-07658

Magnetron-enhanced reactive ion etching of GaAs and AlGaAs using $CH_4/H_2/Ar$.—73-07660

Measurement of AlP/GaP(100) heterojunction band offsets by X-ray photoemission spectroscopy.—73-11307

Mechanical characteristics of aluminum thin films on silicon and gallium arsenide.—73-10249

Mechanical properties of γ-aluminum oxynitride.—73-17381

Mechanical stability of passivation films deposited on aluminum substrates.—73-03614

Mechanical strength of ultrafine Al-AlN composites produced by a combined method of plasma-alloy reaction, spray deposition, and hot-pressing.—73-06821

Mechanisms of optical nonlinearity in waveguide *p-i-n* structures under conditions of electroabsorption of light.—73-15038

Meltback etching and regrowth of GaAs/AlGaAs in liquid phase epitaxy for fabrication of microlens.—73-04401

Memory effect in pressure-induced amorphous $AlPO_4$.—73-12628

Mesa surface recombination current in AlGaAs/GaAs heterojunction bipolar transistors with an emitter-base-emitter structure.—73-07668

Methanolysis and hydrolysis of magnesium aluminum bimetallic alkoxides.—73-02893

Method for preparing a fused silica glass body codoped with a rare-earth element and aluminum.—73-00741

Method for the manufacture of hydrotalcite.—73-05227

Microscopic capacitors and neutral interfaces in III-V/IV/III-V semiconductor heterostructures.—73-07340

Microstructure and room temperature mechanical properties of spray-atomized and codeposited Al-12 wt% Si MMC's.—73-03620

Microstructure-property relations in discontinuous SiC aluminum composites.—73-03621

Minority carrier lifetimes in molecular beam epitaxy grown $Al_xGa_{1-x}As$/GaAs double heterostructures [DH's] doped with aluminum.—73-07673

Model calculations of optical properties for disordered GaAs/AlAs superlattices.—73-04409

Modeling the stirring of Al-SiC composites.—73-06833

Modification of heterojunction band offsets at III-V/IV/III-V interfaces.—73-11320

Modulation spectra of doped $GaAs-Al_{0.3}Ga_{0.7}As$ quantum-well structures.—73-11321

Molecular beam epitaxial growth and characterization of inverted, pulse-doped AlGaAs/InGaAs/GaAs transistor structures.—73-11322

Molecular beam epitaxial growth and optical analysis of InAs/AlSb strained-layer superlattices.—73-11324

Molecular beam epitaxial growth mechanisms of (Al,Ga)As on vicinal GaAs surfaces: self-organization and step bunching.—73-11326

Molecular beam epitaxy growth of semiconductor heterostructure optical converter lasers using the InGaAs/AlGaAs materials system.—73-11333

Monolithic AlGaAs-GaAs single quantum-well ridge lasers fabricated with dry-etched facets and ridges.—73-01253

Mullite whisker-reinforced aluminum: novel metal matrix composites.—73-03625

Narrow-band photoionization resonance transition at 0.65 eV in AlGaAs/GaAs heterostructures.—73-15052

Neutron diffraction of γ-aluminum oxynitride.—73-12635

Neutronographic investigation of the deuteride $Tb_3Ni_6Al_2D_{6.5}$.—73-12637

Nonlinear behavior of the Shubnikov-de Haas oscillations on short-channel $Al_xGa_{1-x}As$/GaAs heterostructures subjected to strong electric fields.—73-11352

Nonlinear surface acoustic waves in GaAs-AlAs superlattices.—73-11353

Optical amplification in quantum superlattices $GaAs/Al_xGa_{1-x}As$ [x=0.35].—73-15068

Optical anisotropy due to exciton polaritons in $Al_{1-x}Ga_xAs$-GaAs quantum wells.—73-04427

Optical characteristics of GaAs/AlGaAs ridge quantum well wires grown by MBE on nonplanar substrates.—73-15071

Optical nonlinearities on GaAs-GaAlAs multiple-quantum-well hetero-*nipi* waveguides.—73-01264

Optical second harmonic generation from unbiased single $Ga_{1-x}Al_xAs$ quantum wells with symmetric structures.—73-01266

Optically detected magnetic resonance excitons and carriers in pseudodirect GaAs/AlGaAs superlattices.—73-15075

Optimization of molecular beam epitaxy grown *p-i-n* multiple quantum well electroabsorption modulators for the 1.5-μm *wavelength region.—73-11364*

Ordering in InGaAs/InAlAs layers.—73-15079

Orientation dependence of normal incidence [ir] absorption in ellipsoidal-valley quantum wells.—73-11367

Oscillatory magnetoabsorption of multilayer quantum well structures.—73-15081

Oxide matrix composite by directional oxidation of a commercial aluminum–magnesium alloy.—73-09535

Phase inversions in Al-Si-Mg gels. Influence of Ti, Ce, and Zr additions.—73-02385

Phonon-assisted resonant magnetotunneling in Al/GaAs-GaAs-AlGaAs heterostructures.—73-15089

Phonon-plasmon modes in the Raman light-scattering spectra of epitaxial *n*-type $Al_xGa_{1-x}As$ films[—review].—73-07712

Photodetector AlGaAs/GaAs structures formed on Si substrates by combining LPE and MBE methods.—73-15091

Photoluminescence and Hall characterization of pseudomorphic GaAs/InGaAs/AlGaAs heterostructures grown by molecular beam epitaxy.—73-11383

Photoluminescence characterization of AlGaN-GaN pseudomorphic quantum wells and calculation of strain-induced band gap shifts.—73-15095

Photoluminescence from a single GaAs/AlGaAs quantum dot.—73-07725

Photoluminescence study of energy transfer processes in erbium-doped $Al_xGa_{1-x}As$ grown by MBE.—73-04441

Photoreflectance and photoluminescence characterizations of $GaAs/Al_xGa_{1-x}As$ single quantum wells with interface structures.—73-15098

Photoreflectance measurements of the $E_1$ and $E_1+\Delta_1$ optical transitions in $In_{1-x}Al_xSb$ epilayers.—73-15099

Piezospectroscopy of a $GaAs/Ga_{0.73}Al_{0.27}As$ single quantum well structure: piezoelectric effects.—73-04566

Plasmon-phonon coupling in GaAs-AlAs superlattices.—73-01285

Polarizability of a donor in a quantum box.—73-04444

Polaronic effects and donor polarizability in a quantum well.—73-01287

Power evolution of an actively mode-locked AlGaAs semiconductor laser.—73-15108

Preparation of Al-C-O-N films by microwave plasma chemical vapor deposition.—73-16911

Preparation of alminum nitride/aluminum composites by nitridation of aluminum.—73-13884

Preparation of alumina/aluminum composites by oxidation of aluminum.—73-00257

Preparation of aluminum nitride/aluminum composites by nitridation of aluminum.—73-06841

Preparation of SiC whisker-reinforced Al alloy composites by compocasting process.—73-03633

Pressure infiltration processing of reinforced aluminum.—73-06843

Process control system for improved run-to-run control of molecular beam epitaxial growth of $GaAs/Al_xGa_{1-x}As$ heterostructures.—73-11404

Process for reducing aqueous nitrate to ammonia.—73-05007

Processing and mechanical properties of laminated metal composites of Al/Al-25 vol% SiC and ultrahigh carbon steel/brass.—73-03634

Processing and reconstruction effects on Al-GaAs(100) barrier heights.—73-04453

Processing of ceramic matrix SiC-Al composites.—73-13885

Properties of alumina/Al/alumina joints produced in air atmosphere.—73-03983

Pyrolytic carbon fiber/aluminum composites.—73-10268

Quantitative oxygen measurements in OMVPE $Al_xGa_{1-x}As$ grown by methyl precursors.—73-15129

Quantum chemical determination of the Al-substituted site in tobermorite.—73-16286

Quantum dot levels produced by strain modulation of GaAs-AlGaAs quantum wells.—73-07753

Quantum well GaAs/AlGaAs shallow-donor far-infrared photoconductors grown by molecular beam epitaxy.—73-11410

Quasi-static and high-frequency *c-v* measurements on $Al/Ta_2O_5/SiO_2/Si$.—73-07354

Radiative recombination in modulation-doped GaAs/AlGaAs heterostructures in the presence of an electric field.—73-15136

Raising transmission in optically transparent lithium aluminum.—73-00695

Raman scattering from $In_{1-x}Al_xSb$ metastable epilayers.—73-11411

Reaction-formed processes for AlN/Al ceramic composites.—73-13892

Reduction of deep levels in MOCVD-regrown $Al_xGa_{1-x}As$ interfaces by $(NH_4)_2S$ passivation and in situ HCl etching.—73-11416

Relaxation oscillation in an AlGaAs laser.—73-01304

Reliability study of TiN/AlCu/TiN interconnect in submicron CMOS process.—73-04469

Reproducible growth and application of AlAs/GaAs double barrier resonant tunneling diodes.—73-11419

Resonant nonlinear optical properties of GaAs-GaAlAs single quantum-well waveguide and an integrated asymmetric Mach-Zehnder interferometer.—73-01305

Resonant one-acoustic-phonon Raman scattering in multiple quantum wells.—73-11421

Scattering of electrons in multibarrier $GaAs/Al_xGa_{1-x}As$ structures.—73-07786

Schottky barrier height [SBH] control at epitaxial NiAl/GaAs(001) interfaces by means of variable band gap interlayers.—73-04473
Selective exciton formation in thin GaAs/$Al_xGa_{1-x}As$ quantum wells.—73-11439
Selective growth of GaAs and GaAlAs by Cl-assisted OMVPE at atmospheric pressure.—73-15156
Selective photosensitivity formation in graded-gap injection photodiode prepared from electron irradiation compensated $Al_xGa_{1-x}As$.—73-01311
Selective reaction ion etching [SRIE] in $SiCl_4/SiF_4$ plasmas for gate recess in GaAs/AlGaAs modulation-doped field effect transistors.—73-11440
Self-aligned bend waveguide AlGaInP visible laser diode with small beam astigmatism.—73-11441
Serpentine superlattice quantum-wire arrays of (Al,Ga)As grown on vicinal GaAs substrates.—73-07795
Space group symmetry of the conduction band minimum in very short period GaAs/AlAs superlattices.—73-07802
Spatially indirect intersubband transitions of localized electrons and holes at the staggered band lineup $In_{0.52}Al_{0.48}As/InP$ interface.—73-11450
Specific heat and characteristic temperature of yttrium- and gadolinium-aluminum borates.—73-02438
Spectral and electrical characteristics of *n*-GaAs-(*n*-*p*)-$Al_xGa_{1-x}As$ *p*-$Al_{0.62}Ga_{1-x}As$-*p*$^+$-GaAs heterostructures with ultrathin surface layers.—73-15167
Spectral characteristics of variable-gap structures with a nonlinear composition profile.—73-01316
Spectrophotometric method for the determination of hafnium and aluminum in zirconia and zircon sand after separation of zirconium with the tri-*n*-butyl phosphate.—73-05087
Spectroscopic transmission ellipsometry studies of intersubband transitions in *n*-GaAs/$Al_{0.3}Ga_{0.7}As$ quantum wells.—73-15173
Spectroscopy of gallium and aluminum orthophosphate single crystals.—73-16310
Spontaneous emission of highly excited GaAs/(Ga,Al)As quantum wells.—73-01319
Stability criteria for buckling of thin anodic films on aluminum.—73-03643
Static *I-V* characteristics of resonant tunnel diodes based on GaAs/AlAs heterostructures.—73-11453
Steady-state carrier escape from single quantum wells.—73-15177
Stress and anisotropy effects in the interfacial reactions of Al and $TiN_x$.—73-03645
Structural refinements on a sodium ß-aluminogallate crystal and a parent $Nd^{3+}$-exchanged crystal.—73-02452
Structure and properties of $(Ti_{1-x}Al_x)N$ films prepared by reactive sputtering.—73-05499
Submilliampere-threshold multi-quantum-well AlGaAs laser without facet coating using single-step MOCVD.—73-01329
Superplastic behavior in a high strain rate range of 6061 aluminum composites reinforced with $Si_3N_4$ whiskers or particulates.—73-10280
Surface polaritons due to the folded optical phonons in GaAs/AlAs superlattices.—73-01336
Syntheses and crystal structures of two novel aluminum selenites, $Al_2(SeO_3)_3{\cdot}6H_2O$ and $AlH(SeO_3)_2{\cdot}2H_2O$.—73-02475
Synthesis and characteristics of $Al^{3+}$-substituted tobermorite by alkoxide method.—73-03035
Synthesis of laminar silicates of magnesium and aluminum in molten salts.—73-12713
TEM investigation of microwave-joined Si-SiC/Si-SiC and α-SiC/Al/α-SiC.—73-00270
Temperature dependence of Raman scattering by acoustic phonons in a superlattice GaAs/AlGaAs in strong magnetic fields.—73-01343
Temperature dependence of the dielectric function and interband critical points of AlAs obtained on an MBE-grown layer.—73-16612
Temperature- and size-dependent excitonic relaxation process in GaAs/AlGaAs quantum wells.—73-04496
Tensile and fatigue fracture behavior and water–environment effects in an SiC-whisker/7075-aluminum composite.—73-03361
Tensile behavior of phosphate-coated aluminum.—73-10283
Tensile properties of 2080/SiC/10–12w aluminum matrix composites.—73-06862
Tensile properties of 6061 Al/SiC composite manufactured by powder metallurgy.—73-03649
Tensile properties of aluminum/alumina multilayered thin films.—73-03650
Terahertz emission in single quantum wells after coherent optical excitation of light hole and heavy hole excitons.—73-07832
Theory of Zn-enhanced disordering in GaAs/AlAs superlattices.—73-07836
Thermal analysis of GaAs-AlGaAs etched-well surface-emitting double heterostructure lasers with dielectric mirrors.—73-15205
Thermal expansion of aluminum borate.—73-16627
Thermal oxidation of AlGaAs.—73-01351
Thermal stability of Mo-Al Schottky metallizations on *n*-GaAs.—73-10286
Thermal stability of pyrolytic tin oxide films on aluminum.—73-10287
Thermodynamic analysis of Al-Mg-Si-C-O interactions in aluminum matrix composites.—73-06865
Thermomechanical processing [TMP] and ductility enhancement of a 6061 Al-$Al_2O_3$ metal matrix composite.—73-03655
Transformation kinetics and properties of co-continuous ceramic composites.—73-10292
Transient photoconductivity in Si-doped $Al_{0.26}Ga_{0.74}As$.—73-07841
Transmission electron microscopy of annealed a-$Si_{1-x}C_x$:H/Al films with different Al grain sizes.—73-09518
Transport in strained relaxed $In_{0.15}Al_{0.85}As/In_{0.17}Ga_{0.83}As$ heterojunctions.—73-06180
Transport phenomena in spaced doped GaAs/$Al_xGa_{1-x}As$ superlattices.—73-11487
Tunneling in Al–silicon oxynitride–Si structures.—73-07372
Turning of fiber- and particle-reinforced aluminum.—73-03662
Ultrafast electron tunneling in reverse-biased, high-efficiency quantum-well laser structure.—73-07849
Vacancy at the DX center [observed] in Si- and Sn-doped AlGaAs.—73-11500
Vacancy titanates intercalated with cationic hydroxy aluminum complexes.—73-03704
Variations of aluminum concentration in ß′-SiAlON grains formed during liquid-phase sintering of $Si_3N_4$-$Al_2O_3$-$Nd_2O_3$.—73-06872
Well width dependence of the exciton lifetime in narrow GaAs/GaAlAs quantum wells.—73-15228
Wet and dry etching characteristics of $Al_{0.5}In_{0.5}P$.—73-07861
Wettability of silicon carbide by liquid aluminum: the effect of free silicon in the carbide and of magnesium, silicon, and copper alloy additions to the aluminum.—73-06879
Wetting behavior of aluminum and aluminum alloys on $Al_2O_3$ and CaO.—73-13908
Whisker-matrix interfacial reactions in SiC, $Si_3N_4$, and $Al_{18}B_4O_{33}$ whisker-reinforced aluminum-matrix composites.—73-13910
X-ray photoelectron spectroscopy study on the electrical double layer at an $Al_2O_3$-Al interface.—73-06881

**amines,**
Optimization of properties of lightweight concrete by polymer admixtures containing amine.—73-00156
Quantitative determination of triethanolamine [TEA] in cements.—73-06710

**ammonia,**
Ammonia plasma passivation of GaAs in downstream microwave and radio-frequency parallel-plate plasma reactors.—73-11064
Dynamics of $NH_3$ photodesorption from GaAs(100): role of electronic quenching.—73-07457
Iron-cobalt catalysts for ammonia synthesis with ceria additives.—73-16526
$NO_x$ reduction by injecting ammonia into cement kiln systems.—73-03506
Orientational disorder in $Ni(NH_3)_6I_2$. Evidence for rotation-translation coupling.—73-05444
Process for reducing aqueous nitrate to ammonia.—73-05007

**ammonium,**
Thermal decomposition process of ammonium paratungstate.—73-06297

**amorphous solid,**
Amorphous silicon, amorphous carbon, and amorphous silicon carbide deposited by remote plasma chemical vapor deposition.—73-09017
Ceramic materials based on amorphous silicon oxide.—73-07111
Densification and crystallization of amorphous $SiO_2$ by neutral beam bombardment.—73-05731
Electronic structure of defects in amorphous silicon nitride.—73-06158
Influence of an electron beam on the energy distribution of localized states in amorphous $Si_3N_4$.—73-11269
Instability in amorphous silicon dioxide/amorphous silicon structures.—73-04120
Local mechanical stability of the aluminum/carbon (amorphous) and aluminum/$SiO_2$ (amorphous) interface at extrinsic dislocations.—73-00248
Mechanism of interaction of amorphous silica with diluted solutions of hydrofluoric acids.—73-14033
Preparation of amorphous $NiPS_3$ by a sol-gel-type method.—73-03869
Pressure-amorphized $SiO_2$ α-quartz: an anisotropic amorphous solid.—73-08959
Production of amorphous silicon dioxide from hexafluorosilicic acid.—73-14481
Structural change due to thermal treatment and dielectric properties of anodic oxide films of bismuth.—73-08747
Structure of amorphous silicon nitride.—73-16334
Use of the ESR signal-saturation method in an experimental study of hydrogenated amorphous variable-composition SiC.—73-07855
Wide-band-gap hydrogenated amorphous silicon carbide prepared from a liquid aromatic carbon source.—73-13335
X-ray photoelectron spectroscopy and X-ray-excited Auger electron spectroscopy studies of the initial deposition of hydrogenated amorphous carbon.—73-05523

**amplifiers,**
Noise reduction in photorefractive image amplifiers and applications.—73-07902
Progress in optical function devices using two-section laser diodes/amplifiers.—73-15122
Ti:$Al_2O_3$ master-oscillator/power-amplifier system.—73-15210

**analysis/analyzers,**
Advances of boron analysis in glass and ceramics.—73-00303
American Vacuum Society Recommended Practice: recommended practice for the calibration of mass spectrometers for partial pressure analysis.—73-05018
Analysis and measurements in ceramic laboratories.—73-12105
Analysis and study of some bone china.—73-10791
Analysis of effects of elastic inhomogeneity and residual thermal stress on fracture toughness by the equivalent inclusion method.—73-06323
Analysis of high-purity ceramic powders and sinters by optical emission (OES) and atomic absorption (AAS) spectrometry.—73-01882
Analysis of Y-Ba-Cu-O films by differential dissolution.—73-04668
Analytical methods for high-temperature superconducting materials.—73-11686
Automated analytical systems are the focus of a government/industry consortium.—73-03381
Ceramic materials: microstructural and interface analysis as a prerequisite for the optimization of microstructure: II, High-voltage and high-resolution electron microscopy (HVEM and HREM) for ceramic materials.—73-06191
Ceramic materials: microstructural and interface analysis as a prerequisite for the optimization of microstructures: I, Introduction and microstructural systems.—73-06192
Characterization of Ceramics.—73-13653
Chemical analysis of strontium lanthanum manganite.—73-05027
Critical behavior of specific heat in ferroelectric $K_2ZnCl_4$ and $(NH_4)_2BeF_4$ at normal-incommensurate phase transition.—73-07875
Current technologies of particle size analysis.—73-12124
Deposition and analysis of lithium niobate and other lithium niobium oxides by rf magnetron sputtering.—73-11559
Diffusion of technological knowledge: a case study in North American ceramic analysis.—73-09779
Emissivity as a method of surfaces and thin-film analysis.—73-03142
Evaluation of concrete properties by use of elastic waves due to Schmidt hammer impact.—73-09950
Evaluation of fracture toughness by a single-edge V-notched beam method.—73-03282
Experimental study in distinguishing grog (chamotte) from argillaceous inclusions in ceramic thin sections.—73-09783
Fragmentary approach in searching for new compounds.—73-08630
Mechanical Behavior of Materials: Engineering Methods for Deformation, Fracture, and Fatigue.—73-13655
Microstructural analysis using image analysis.—73-09476
Monitoring and analyzing waste glass compositions.—73-12209
Multiclient study project comparison of the particle size analyzers and establishment of its techniques.—73-01918
Nanocomposites: retrospect and prospect.—73-06582
New methodology for furnace monitoring, analysis, and control.—73-12232
New, simple, rapid, and reliable method for determining sulfur trioxide and phosphorus pentoxide in portland cement and classes C and F fly ash.—73-06693
Particle size analysis.—73-08429
Progress in sampling and on-stream analysis.—73-10105
Qualitative X-ray phase analysis based on calculated standards.—73-15834
Rapid analysis of cement to ASTM: C-114.—73-03525
Rapid immunoassay field screening methods for the detection of PCB's, pentachlorophenol, and petroleum fuels in soil.—73-12183
V-notched technique for single-edge notched-beam and chevron notch methods.—73-03375
Why study artifacts—an interdisciplinary approach.—73-09798

**anatase,**
Ir spectroscopic study of $H_2O$ influence on $SO_2$ adsorption on $TiO_2$ surface.—73-13412
Nitrogen dioxide adsorption of deuteroxylated titania (anatase).—73-08927
Photoluminescence in $TiO_2$ anatase single crystals.—73-16565
Rapid-rate sintering of anatase-type $TiO_2$ by microwave heating.—73-09292

**andalusite,**
Andalusite—the Hillsborough deposit.—73-08490
Thermoremanent magnetization of Fe-Ge andalusite spin glass.—73-15372

**anhydride,**
Features of low-temperature relaxation transition in vitreous boric anhydride.—73-13988

**anhydrite,**
Anhydrite binders activated with portland cement and potassium sulfate with addition of fly ash filler.—73-09816
Examination of the durability of anhydrite binder activated with portland cement and potassium sulfate.—73-09954
Halite pseudomorphs after gypsum in bedded anhydrite—clue to gypsum-anhydrite relationships.—73-15905
Reexamination of dissolution heat of gypsum and anhydrite in water at 25°C.—73-13773

**anions,**
Dynamics of an anion subsystem in new olivofluorozirconate glasses by the method of $^{19}F$ nuclear magnetic resonance.—73-00328

**anisotropy,**
$^{89}Y$ NMR study of the anisotropy of the static and dynamic susceptibility in $YBa_2Cu_3O_{6+x}$.—73-15671
Anisotropy of deposition rate in magnetron sputtering of $CeO_2$.—73-02726
Anisotropy of the magnetization of isolated $Fe^{2+}$ ions in II-VI compounds.—73-01075
Anisotropy of the optical reflection of GaAs in the region of its fundamental absorption edge.—73-01076
Anomalously large gap anisotropy in the *a-b* plane of $Bi_2Sr_2CaCu_2O_{8+\delta}$.—73-15393
Coherence length and penetration depth in high-$T_c$ superconductors.—73-04680
Effective electron mass anisotropy in silicon carbide.—73-16125
Electronic conduction in highly anisotropic systems.—73-07320

Hardness anisotropy in $Bi_2Sr_2CaCu_2O_8$.—73-15497
Knoop hardness anisotropy of $YBa_2Cu_3O_{7-\delta}$ single crystals.—73-08120
Measurements of anisotropic characteristic lengths in YBCO films at microwave frequencies.—73-04768
Pore preference in elastically anisotropic cubic crystals.—73-17095
Structural anisotropy and birefringence in porous glass plates.—73-00405
Temperature-dependent anisotropy of normal-state magnetic susceptibility of metallic copper oxides.—73-08979

**annealing,**
Annealing effects on (Ln, Ce)$_2$CuO$_4$ system.—73-15388
Annealing response of disordered sputter-deposited vanadium pentoxide ($V_2O_5$).—73-02727
Anomalies in annealed LT [low-temperature] GaAs samples.—73-14775
Contribution to the axial annealing of molds.—73-14343
Crystallization of grain-boundary phases in silicon nitride with low additive contents by microwave annealing.—73-05724
Effect of annealing of vials on glass-dust contamination of medical preparations.—73-07123
Effect of postannealing on electrical properties of $Ta_2O_5$ thin film deposited by PECVD using $TaCl_5$ and $N_2O$.—73-04080
Effect of postdeposition annealing on structure and chemistry of the TiN film/steel substrate interfaces.—73-00222
Effects of annealing on properties of MgO-$ZrO_2$ composite ceramics.—73-02804
Effects of rapid recurrent annealing on structure and magnetooptical properties of garnet films.—73-04607
Effects of rapid thermal annealing on both the stress and the bonding states of a-SiC:H films.—73-09108
Ellipsometric study of rapid thermal annealed [RTA] PECVD SiN films.—73-05559
EPR and magnetostatic studies of low-temperature annealing of ceramics.—73-07252
Evidence for low-temperature uv annealing of uv CVD, PECVD, and [spin-on-glass] SOG-based $SiO_2$ films.—73-04098
Gas composition in the annealing zone and glass-working properties.—73-00635
Improved control of momentary rapid thermal annealing for silicidation.—73-04112
Laser annealing of high-$T_c$ superconductors.—73-15532
Low-temperature annealing of *p*-cadmium telluride in gallium bath.—73-07645
Process of low-temperature annealing of ceramics [studied] by the method of electron paramagnetic resonance and magnetostatics.—73-05994
Rapid pulsed $CO_2$ laser annealing of silicon nitride/silicon interface states.—73-06008
Rapid thermal annealing [RTA] of spin-on-glass [SOG] films.—73-03881
Rapid thermal annealing of semiconductors by microwave energy.—73-09291
Spatial nonuniformity in Cd-annealed CdTe crystals.—73-11449
Superconductivity at 77 K in (Pb,Cu)$Sr_2$(Ca,Y)$Cu_2O_7$ by postannealing.—73-04813
Thermophysical properties controlling annealing and tempering.—73-07090
Wall thickness determination for glass hollowware in annealing calculations.—73-00720

**anodes,**
Anode arc attachment control using boundary layer bleed holes.—73-08317
Anodic oxidation of tungsten in nonaqueous electrolyte: II, Electrochemical coloring and bleaching of the oxide film.—73-13466

**anorthite,**
Anorthite and thermal expansion of CaO-$Al_2O_3$-$SiO_2$-$B_2O_3$ ceramics.—73-05532
Anorthite and thermal expansion of CaO-$Al_2O_3$-$SiO_2$-$B_2O_3$ ceramics.—73-12746
Glass-ceramic biomaterials based on the fluorapatite-anorthite and fluorapatite-diopside systems.—73-02013
Incorporation of $Gd^{3+}$, $Eu^{3+}$, and $Eu^{2+}$ ions in anorthite and related glasses.—73-14005
Influence of viscosity on the crystallization of some anorthite-diopside glass precursors.—73-00647
Low-temperature fabrication of anorthite ceramics.—73-05899
Matte glaze of anorthite.—73-10866
Sol-gel synthesis of $B_2O_3$-doped anorthite and its characteristics.—73-03023
Sol-gel synthesis of $B_2O_3$-doped anorthite and its characteristics.—73-13280

**antennas,**
Ferrite microstrip antenna.—73-15378

**antiferromagnetism,**
Acoustics of magnetoelectric antiferromagnetics: rhombohedral crystals.—73-11645
Cohesive energy of NiO: a quantum Monte Carlo approach.—73-08823
Effect of longitudinal relaxation on dynamic [magnetic] susceptibility of antiferromagnets.—73-15318
Electron magnetic resonance in a series of antiferromagnetic molecular perovskites.—73-05557
Magnetization and spin correlation of two-dimensional triangular antiferromagnet $LuFe_2O_4$.—73-07961
Nanophase molecular antiferromagnets.—73-04632
Universal magnetic properties of $La_{2-x}Sr_xCuO_4$ at intermediate temperatures.—73-15374

**antimonia,**
$Bi_2O_3$-$Sb_2O_3$ binary system.—73-11694
Effect of antimony oxide on phase separation in sodium borosilicate glass.—73-00329
Mechanistic study of the synergism between $Sb_2O_3$ and $MoS_2$ lubricant systems using Raman spectroscopy.—73-06938
Structure of glasses of the $B_2O_3$-$Sb_2O_3$ system using small-angle X-ray scattering data.—73-01029

**antimonides,**
Advanced dielectrics for passivation of InSb.—73-04056
Anomalies in the structural and electrophysical properties of the amorphous semiconductor a-GaSb:Ge.—73-11069
Anomalous Andreev conductance in InAs-AlSb quantum wells with Nb electrodes.—73-07380
Band structure and optical characteristics of thullium monoantimonide.—73-16413
Characterization below threshold of GaInAsSb/GaAlAsSb double-heterostructure lasers emitting near 2.37 μm.—73-14797
Crystallization of metastable phases and superconductivity in amorphous GaSb.—73-14820
DX-like center in bulk GaSb:S.—73-04285
Effect of interfacial bond type on the electronic and structural properties of GaSb/InAs superlattices.—73-11158
Electrical properties and photoluminescence of epitaxial GaSb:Bi and GaSb:Bi:Sn films formed from Bi solutions.—73-01145
Electronic properties of strained heterostructures.—73-14883
Growth of InAs-AlSb quantum wells having both high mobilities and high concentrations.—73-04353
High-temperature superconductivity on $YBa_2Cu_3O_{7-\delta}$-$YBa_2SbO_6$ system by rapid quenching in air.—73-04736
Hume-Rothery rule in V-VI compounds.—73-04356
Impurity distribution near *p*-GaInAsSb/*p*-GaAlAsSb heterojunctions.—73-11260
Interface structure in InAs/AlSb quantum wells grown by molecular beam epitaxy.—73-11280
Intrinsic point defects and microdefects in GaSb single crystals doped by electrically active impurities (Si, Ge, Te).—73-17082
Long-wavelength low-threshold lasers based on III-V compounds.—73-15015
Low noise ohmic contacts on *n*- and *p*-type GaSb.—73-07642
Low-noise ohmic contacts on *n*- and *p*-type GaSb.—73-15020
Metal-insulator transition in a-GaSb:Cu.—73-04135
Molecular beam epitaxial growth of high-mobility *n*-GaSb.—73-11329
Molecular beam epitaxial growth of InSb on GaAs and Si for infrared detector applications.—73-11330
Natural aging changes in galvanomagnetic properties of undoped CdSb.—73-11343
Nonstoichiometry and intrinsic point defects [and microdefects] in GaSb.—73-17089
Phase equilibrium melt-solid in the system Pb-InSb-GaSb and Pb-InAs-GaAs.—73-11373
Preparation of Sb/GaSb(111)-oriented multilayer structures using molecular beam epitaxy and migration-enhanced epitaxy.—73-07745
Radiation recombination in type-II *n*-GaInAsSb/*n*-GaSb heterojunctions.—73-15133
Raman light scattering in a-GaSb.—73-15137
Role of defects in the passivation of III-V semiconductor surfaces modified by alkali metals: $O_2$/Rb/*p*- and *n*-type GaSb(110).—73-07776
Self-consistent tight-binding calculations of band offsets in GaAs/$Al_xGa_{1-x}As$-(110) and GaSb/$Al_xGa_{1-x}Sb$-(110) heterojunctions. Theoretical evidence for a new common-anion rule.—73-07792
Spectral responses in near-infrared of the mixed compounds III-V, ternary and quaternary, based on GaSb.—73-07803
Spectral responses in near-infrared of the mixed compounds III-V, ternary and quaternary, based on GaSb.—73-15169
Structure of an Mn impurity center in GaSb.—73-07817
Surface-layer modulation of electron concentrations in InAs-AlSb quantum wells.—73-11470
Synthesis and physical properties of antimonides of $Me_3Sb_2O_{12}$ group (Me=In, Sc, La, Pr, Tb, Yb).—73-17022
X-ray electronic investigation of $Hg_2Sb_2O_7$.—73-08792
X-ray photoelectron spectroscopy investigation of the mixed anion GaSb/InAs heterointerface.—73-11510

**antimony oxide,**
Antimony(V) oxide grafted onto a silica gel surface: acidic properties and thermal stability.—73-05533
Comparative model study of antimony and cerium oxide refining.—73-00599
Composition and structure of phases formed in the process of hydrated antimony pentoxide [HAP] thermolysis.—73-02170
Crystal structure, short-range and long-range magnetic ordering in $CuSb_2O_6$.—73-02218
Effect of $Sb_2O_3$ addition on water durability of $V_2O_5$-$P_2O_5$ glass.—73-00333
Electrical properties of $Sb_2O_3$-SrO-$V_2O_5$ glasses and crystallized ones.—73-00477
Refinement of crystal structure of $LiSbO_3$.—73-16290
Sol-gel preparation of M-Sb oxides from Sb(OBu$^n$)$_3$-M-acetate precursors with M=Mn, Co, Ni.—73-06063
Synthesis and characterization of perovskite-type $BaTl_{0.5}Sb_{0.5}O_3$ and $BaTl_{0.5+x}Sb_{0.5-x}O_{3-x}$.—73-01340
Synthesis, structural characterization, and two-dimensional antiferromagnetic ordering for the oxides $Ti_{3(1-x)}Ni_xSb_{2+x}O_6$ [1≥x≥0.6].—73-02504
Twinning in ZnO ceramics with $Sb_2O_3$ additions.—73-02532

**antimony,**
Alteration of electron-electron interaction effects in metal-insulator-metal trilayers.—73-14679
Are there Tamm-state donors at the InAs-AlSb quantum well interface.—73-07383
Blackening of tin oxide thin films heavily doped with antimony.—73-08814
Crystal structure of α-TlSbOGeO$_4$—high-temperature modification of KTiOPO$_4$.—73-12560
Crystal structures of $Hg_4Sb_2I_8$ and $Cd_4Sb_2I_8$.—73-02220
Effect of antimony addition on electrical and optical properties of tin oxide film.—73-08837
Effect of dopant incorporation on structural and electrical properties of sprayed $SnO_2$:Sb films.—73-08838
Effect of interface composition on the band offsets at InAs/AlSb(001) heterojunctions.—73-07465
Effect of Sb additions on the formation of the high-$T_c$ phase in the Bi-Pb-Sr-Ca-Cu-O superconducting thick films.—73-08038
Effect of Sb doping on point defect ensemble in MOVPE GaAs.—73-14855
Electrical and optical properties of Sb-doped $SnO_2$ films prepared by chemical vapor deposition.—73-05555
Electronic properties of Sb monolayers on III-V(110) surfaces determined by resonance Raman scattering.—73-11189
Electronic surface state resonant Raman scattering from vibrational modes of adsorbed monolayers: Sb on III-V semiconductors.—73-04315
Fermi-level variation on GaAs(110) surface with Sb overlayer studies with a photoelectron microscope.—73-11213
Grain growth during liquid-phase sintering of Sb-doped $BaTiO_3$.—73-09150
Growth mode of Bi and Sb layers on GaAs(110) and InP(110).—73-01179
High gain AlInAs/GaAsSb/AlInAs NpN HBT's on InP.—73-11243
In overlayers on Sb-passivated GaAs.—73-07577
In situ observation of crystallization from a superconductor melt of composition $Bi_{1.6}Sb_{0.1}Sr_2Ca_2Cu_3O_x$.—73-08102
Interactions in the system $SnO_2$-$GaSbO_4$.—73-12608
Kinetic study of refining by antimony.—73-14414
Liquidus of the system Sm-Sb-Se.—73-12622
Noncrystalline BiPbSbSrCaCuO and its heat-treatment effect.—73-11845
Optimum growth temperature determination for GaInSb/InAs strained-layer superlattices.—73-11366
Oxide superconducting compositions containing antimony.—73-01623
Preparation and crystal structure of $Na_3SbO(PO_4)_2$.—73-02399
Reflection high-energy electron diffraction studies of the growth of InAs/$Ga_{1-x}In_xSb$ strained-layer superlattices.—73-07767
Sb-induced optical transitions of the Sb/GaAs(110) interface.—73-01308
Sb-induced surface stabilization of InP(100) wafer beyond 500°C.—73-11428
Synthesis and crystal structure of a new antimony(III) molybdate: $LiSbMo_2O_8$.—73-02479
Synthesis and crystal structure of a novel zintl phase: $K_3SbTe_3$.—73-02481
Synthesis and unit cell data of a new cadmium antimonate electronic ceramic.—73-08766
Threshold behavior in the nonisothermal properties of Ge-Sb-Se glasses.—73-03770
X-ray standing wave study of the Sb/GaAs(110) interface structure.—73-07866
X-ray structural study of consecutive phase transitions in potassium pentafluoroantimonate(III) in the 323–98 K range: I, Dynamics, symmetry, and lattice parameters.—73-16397
X-ray structural study of consecutive phase transitions in potassium pentafluoroantimonate(III) in the 323–98 K range: II, Crystal structure.—73-16398
X-ray structural study of consecutive phase transitions in potassium pentafluoroantimonate(III) in the 323–98 K range: III, Structural modulation.—73-16399
Zero resistance of quenched $Bi_{1.5}Pb_{0.4}Sb_{0.1}Sr_2Ca_2Cu_3O_x$ at 140 K.—73-04828

**apatite,**
Apatite coating on organic polymers by a biomimetic process.—73-16656
Apatite coating on yttria-doped partially stabilized zirconia plate in the presence of water vapor.—73-05693
Apatite coating on yttria-doped partially stabilized zirconia plate in the presence of water vapor.—73-12920
Apatite glass ceramic.—73-14533
Apatite in feldspars may be critical for glass quality.—73-14322
Biological and physical properties of apatite coatings.—73-08503
Coating of apatite layer on surfaces of organic polymers by a biomimetic process.—73-09043
Coating of apatite layer on surfaces of organic polymers by a biomimetic process.—73-16676
Crystal growth of apatite on seeds of calcium salts.—73-12559
Effect of modifiers in bioglass on the glass properties and the formation of apatite.—73-03724
Effect of residual glassy phase in a bioactive glass-ceramic on the formation of its surface apatite layer in vitro.—73-00332
Effects of manganese(II) and iron(II) on the cathodoluminescence signal in synthetic apatite.—73-12779
Electrochemical deposition of calcium-deficient apatite on stainless steel substrate.—73-06778
Electrochemical deposition of calcium-deficient apatite on stainless steel substrate.—73-13831
Fabrication and properties of $Si_3N_4$ with rare-earth apatite grain-boundary phases.—73-05799
Influence of octacalcium phosphate [OCP] addition on hydraulic properties of apatitic cement.—73-13739

Magnesium content effects on the crystallization behavior of bioactive glasses in the system $CaO$-$MgO$-$SiO_2$-$P_2O_5$-$CaF_2$.—73-14031
Preparation of apatite thin films through rf sputtering from calcium phosphate [CP] glasses.—73-16916
Process of formation of bonelike apatite layer on silica gel.—73-06270
Properties of apatite cement composed of α-tricalcium phosphate and tetracalcium phosphate.—73-10106
Structure of $CO_3^{3-}$ center in tooth enamel.—73-16335
Synthesis of glass-ceramics in the wollastonite–apatite–celsian system.—73-07182

**apparatus,**
Apparatus for continuous growth of SiC single crystal from SiC synthesized in a vapor phase without using graphite crucible.—73-12071
Apparatus for controlled supply of alumina.—73-15703
Apparatus for depositing of a material on a substrate by chemical vapor deposition.—73-15706
Cosputtering and serial cosputtering using cylindrical rotatable magnetrons.—73-09051
Microgravimetric plasmochemical apparatus.—73-01916
Modular IBAD apparatus for continuous coating.—73-01870
Sample tilting mechanism and transfer system for high-temperature thin-film deposition and ultrahigh vacuum photoelectron emission microscopy [PEEM].—73-05085

**applications,**
Advanced ceramic application in the ceramic industry.—73-05152
Advanced ceramics—an overview.—73-05153
Application of engineering ceramics to the mechanical parts.—73-12314
Applications for ceramic coatings.—73-05155
Applications of silicon-nitride-based ceramics in the U.S.—73-05259
Barium carbonate.—73-12257
Boron.—73-12262
Carbon-carbon: bringing it to the marketplace.—73-05260
Ceramic raw materials and their uses.—73-00895
Ceramic Transactions, Volume 36: Microwaves: Theory and Application in Materials Processing II.—73-17519
Composite materials: new opportunities for industrial applications in construction and transportation.—73-09705
Comprehensive utilization of fly ash.—73-08496
EDM in new places.—73-15719
Future of fly ash in the ceramic industry.—73-12273
Ground floor.—73-00097
Know when to use "advanced" materials.—73-15928
Laser-assisted hot machining of ceramics and composite materials.—73-05891
Model of hydrogen behavior in enameling-grade steels: II, Application.—73-03624
New developments in hydroxyapatite ceramics.—73-05176
New kinds of refractories for ferrous metallurgy.—73-10746
Present and future applications of superconductivity.—73-08180
Research on and applications of new glasses.—73-09746
South African ceramic developments.—73-05181
Star war materials launch commercial products.—73-06595
Superplastic-like flow in ceramics: recent developments and potential applications.—73-08525
Tile applications in public buildings.—73-07276

**aragonite,**
Experimental and natural mimetic dolomitization of aragonite.—73-15902

**archeology,**
Ancient flat glass unearthed from China.—73-13660
Archaeometric investigation of ancient glasses from the Balearic Islands.—73-13662
Archaic imported fine wares from the Acropolis, Mytilene.—73-09775
Archaic plastic vases from Isthmia.—73-09776
Bellows' nozzles, tuyeres, and kiln firing supports.—73-09777
Bodies and glazes of Jingdezhen porcelain in ancientry.—73-06609
Ceramic chronology and chronometric dating: stratigraphy and seriation at La Blanca, Guatemala.—73-06610
Ceramic folklore of Iwami-Yaki porcelain wares.—73-06611
Ceramic sequence at Nakbe, Guatemala.—73-06612
Chemical compositions of ancient Central Asian glasses and the results of the restoration of lost schicht recipes.—73-13664
Diffusion of technological knowledge: a case study in North American ceramic analysis.—73-09779
Direct dating and identity of fiber temper in precontact Bushman (Basarwa) pottery.—73-03422
Drilling method of glass bead making.—73-09780
Early Bronze Age III pottery from Bahcehisar: the significance of the Pre-Hittite sequence in the Eskisehir Plain, northwestern Australia.—73-09781
European ceramics and the elusive "Cittie of Raleigh."—73-06615
European protoporcelain: the social context of the history of a sixteenth century ceramic technology known as Saint-Porchaire.—73-00007
Faience beads of the Irish Bronze Age.—73-09784
From pots to people: ceramic production in the ancient Mediterranean.—73-09785
Intensive ceramic production and Classic period political economy in the Sierra de los Tuxtlas, Veracruz, Mexico.—73-09786
It was the turning wheel, and not the lathe—mold pressing and mold turning of hot glass in ancient glass vessel production.—73-09787
Izumo-Yaki ceramic wares—historical survey.—73-00009
Kalinga ceramics and new technologies: social and cultural contexts of ceramic change.—73-00010
Laboratory profile: Museum Applied Science Center for Archaeology (MASCA), The University Museum, The University of Pennsylvania, Philadelphia, Pennsylvania.—73-03423
Late Woodland miniature pottery vessels from the Delaware Valley.—73-09788
Microstructural investigation of renaissance mortar from Montreal, Quebec, Canada.—73-10048
Mineralogy and micromorphology of Chalcolithic and Early Bronze Age Ikiztepe ceramics.—73-09789
Models for technological innovation: an ethnoarchaeological project in Pino Suarez, Mexico.—73-00011
Mycenaean pictorial pottery from the Argive Heraion.—73-09790
Neutron activation of bird bowls and related archaic ceramics from Miletus.—73-06617
New wine in ancient wineskins: the evidence from Attic vases.—73-09791
Physical chemistry analysis of Jun glaze.—73-10880
Politics, economics, and ceramic continuity at Gordion in the late second and first millennia B.C.—73-00013
Pottery from Archaic building Q at Kommos[, Crete].—73-09792
Red-figured pottery from Samothrace.—73-09793
Regional studies and ceramic production areas: an example from La Mixtequilla, Veracruz, Mexico.—73-09794
Science and the art museum: the analysis of archaeological materials.—73-09795
Scientific analysis of ancient Jun wares in China.—73-09796
Scientific analysis of Roman glass from Augusta Praetoria.—73-06618
Spanish colonial kiln tradition of Moquequa, Peru.—73-13672
Teisias and Theodoros: East Boiotian potters.—73-10178
Why study artifacts—an interdisciplinary approach.—73-09798
X-ray fluorescence-pattern recognition analysis of pottery from an early historic Hispanic settlement near Santa Fe, New Mexico.—73-09799

**architecture,**
Architectural glasses produced by surface-treatment processes.—73-03821
Current situation and development of architectural pottery in China.—73-10811

**argon,**
Computer simulation of the adsorption of argon on the surface of titanium dioxide: I, Crystalline rutile.—73-12757
Computer simulation of the adsorption of argon on the surface of titanium dioxide: II, Amorphous surface.—73-12758
Effect of argon addition on the microstructure, texture, and phases of silicon carbide prepared by chemical vapor deposition.—73-02780
Role of the buffer gas in the ArF laser chemical vapor deposition of silicon oxide.—73-09310

**armor,**
Composite tactical hard body armor.—73-10308
Deformation energy of Kelvar backing plates for ceramic armors.—73-12763

**arrestors,**
How to beat lightning bolts.—73-07571

**arsenate,**
Compounds containing layers of composition $[(Sb^{III}F)PO_4]$, $[(Sb^{III}F)As_4]$—crystal structures of $Na(SbF)PO_4{\cdot}1.5H_2O$, $Na(SbF)AsO_4$, $NH_4(SbF)PO_4{\cdot}H_2O$, and $NH_4(SbF)AsO_4{\cdot}3H_2O$.—73-02171
Laser damage formation in $KTiOPO_4$ and $KTiOAsO_4$ crystals: grey tracks.—73-12825

**arsenic,**
Ambipolar photoconductivity of amorphous $As_2Se_3$ films.—73-01072
Anisotropy induced by photoinduced alloying of vitreous $As_2Se_3$ by silver.—73-16409
Arsenic cluster engineering for excitonic electrooptics.—73-11072
Arsenic reflection from GaAs and AlGaAs surface during molecular beam epitaxy.—73-11073
Composition of the vapor phase in the ternary system In-As-P.—73-16061
Compositional dependence of crystallization of As-Te glasses.—73-03826
Crystallization of glasses in the As-Se and Tl-As-Se system during heating.—73-00605
Crystallization processes and glass-forming ability of a set of glassy alloys in the As-Se-Te system.—73-06899
Determining the refractive index and absorption coefficient of Ag-photodoped amorphous As-S films.—73-14153
Effect of annealing on the properties of conductivity and diffusional mass transport in $As_2S_3$ films photodoped with silver.—73-00451
Effects of As flux on Si delta-doped GaAs.—73-11170
Electrical conductivity and Seebeck coefficient of smithite under pressure above 20 GPA.—73-16477
Electrical properties of a contact between modified and unmodified glassy $As_2Se_3$.—73-01146
Electromodulation study of GaAs with excess arsenic.—73-07490
Equilibrium phase diagram of the system In-As-Pb.—73-12581
Features of electroconductivity of films of $As_2S_3$ photoalloyed with silver.—73-14918
Influence of halogen impurities of charge transport in glassy Se-As semiconductors.—73-14981
Kinetics of dissolution of $AgAsS_2$ glass in acid oxidizing media.—73-00363
Magnetic spin effects in the photoconductivity of amorphous $As_2Se_3$.—73-07651
Negative photoacoustic effect in glassy arsenic selenide.—73-01257
Nonlinearity and photostructural changes in glassy $As_2S_3$ thin films.—73-14237
Projection of the liquidus surface of the ternary system Nd-As-Se.—73-12662
Raman scattering in amorphous $As_xSe_{100-x}$ layers. Anomaly of concentration dependence.—73-15138
Structural changes in thin As-Se films: DSC and EXAFS studies.—73-14090
Structural transformation in thin films of the system As-Se investigated by the method of differential scanning calorimetry.—73-16327
Ternary system Tm-As-Se.—73-12717
Thermal and electrical properties of new glasses in the binary system $Li_2S$-$As_2S_3$.—73-08983
Thermal behavior of arsenopyrite.—73-02522
Thermooptic properties of glasses of the system Ge-As-S.—73-00566
Transformation of the vibrational spectrum and structure of glasses after quenching.—73-03771

**arsenide,**
Anisotropy of surface energy of monocrystals of cadmium diarsenide.—73-10917
Atomic layer epitaxy of AlAs and $(AlAs)_n(GaAs)_n$.—73-04246
Comparison of As- and P-based semiconductors grown at low temperatures by MBE and GSMBE.—73-14812
De Haas-van Alphen [dHvA] studies of YbAs above and below Neel temperature.—73-08831
Interband transitions in $Zn_3As_2$.—73-08893
Magnetic properties of diluted $(Zn_{1-x}Mn_x)_3As_2$ solutions.—73-02638
Molecular beam epitaxial growth of arsenide/phosphide heterostructures using valved, solid group V sources.—73-11327
Novel electronics enabled by rare-earth arsenides buried in III-V semiconductors.—73-04421
Optimization of interfaces in arsenide-phosphide compounds grown by gas-source [GS] molecular beam epitaxy.—73-11363
Oriented films of semiconductor compounds $Zn_3As_2$ and $Cd_3As_2$ on sapphire substrates.—73-15080
Phase equilibrium melt-solid in the system Pb-InSb-GaSb and Pb-InAs-GaAs.—73-11373
Spectroscopic ellipsometry: a useful tool to determine the refractive indices and interfaces of $In_{0.52}Al_{0.48}As$ and $In_{0.53}Al_xGa_{0.47-x}As$ on InP in the wavelength range from 280 to 1900 nm.—73-15172
Synthesis and structure of $ZnMn_2As_2$.—73-02495
Temperature dependence of the dielectric function and interband critical points of AlAs obtained on an MBE-grown layer.—73-16612

**art/artware,**
Chihuly, the virtuoso of glass.—73-13665
Contemporary ceramics in South Africa: an overview.—73-09778
Izumo-Yaki ceramic wares—historical survey.—73-00009

**artificial intelligence,**
Artificial olfactory sensor on plural quartz crystals.—73-03776

**asbestos,**
Asbestos cement products with protective and decorative coatings based on waste-diluted painting compositions.—73-13679
Cryogenic salt resistance of asbestos cement pile pipes.—73-13699
Design of a vitrification process for the destruction of asbestos wastes.—73-09710
Improving the technology of manufacturing asbestos cement products using polyacrylamide.—73-13736
Method of operative control by drying asbestos ore in shaft furnaces.—73-01798

**ash,**
Binder-enhanced refuse-derived fuel ash: a study of hydrolysis.—73-13682
Glass forms for incinerator ash immobilization.—73-13998
Hydration of brick kiln ash blended white portland cement.—73-09987
Possibility of making hydraulic binder by chemical activation of domestic ash and mixture of slag and domestic ash.—73-13761
Relationship between the strength and nondestructive parameters of rice husk ash [RHA] concrete.—73-03528
Small wall blocks of nonautoclave gas-ash concrete.—73-00189
Structural model and hydraulic activity of granulated cinder in electric factories.—73-00194
Suitability of rice husk ash obtained by fluidized-bed combustion for blended cement.—73-06724

**aspect ratio,**
Equation which relates the real three-dimensional aspect ratio to the apparent cross-sectional aspect ratio.—73-03281

**asphalt,**
Reclaimed ceramic material for use in road construction.—73-09743

**atmosphere,**
Behavior of the 123 superconductor system during changes in atmospheric condition.—73-01495
Composition of a protective atmosphere on water-resistant surfaces of silicate glass.—73-00312
Effect of carbonization atmospheres on yields and tensile strength of phenolic resin-based carbon fibers.—73-02781

**atomization,**
Controlled aspiration—a new thermal spray process.—73-08329

**atoms,**
Atomic arrangement at grain boundaries and interfaces [observed] by high-resolution electron microscopy.—73-06187
Atomic radii of the elements.—73-01886
Foreign atom implantation by high-energy electron irradiation.—73-16784

In situ observation of atomic movement at surface by scanning tunneling microscope—high-temperature STM.—73-05418
Plasma diagnostic studies of the influence of process variables upon the atomic and molecular species ejected from (1−*x*)$Li_4SiO_4$:*x*$Li_3PO_4$ targets during radio frequency magnetron sputtering.—73-02924

**attenuation,**
Features of acoustic wave attenuation in polycrystalline YIG.—73-01460
Ultrasonic attenuation study of hydronium ß˝-alumina.—73-01040
Ultrasonic characterization of green and sintered ceramics: II, Frequency domain.—73-15858
Ultrasonic shear wave attenuation study on $Na^+$, $K^+$ ß˝-alumina.—73-01041

**Auger electron spectroscopy,**
Instrumental considerations for acquiring quantitative Auger electron spectra.—73-01908
Limitations on AES quantitative analyses of plasma-deposited ceramics.—73-08408
Quantitative analysis of alkali silicate solutions by ICP AES.—73-06959

**autoclaves,**
Mechanical property evolution during autoclaving process of aerated concrete using slag: I, Tobermorite formation and reaction behavior of slag.—73-13752
Mechanical property evolution during autoclaving process of aerated concrete using slag: II, Fracture toughness and microstructure.—73-13753
Properties of autoclaved calcium silicate materials using waste tile: influence of $SiO_2$ sources.—73-10107

**automation,**
Advances in pressed ware manufacture.—73-10494
Automated analytical systems are the focus of a government/industry consortium.—73-03381
Automation goal for MaasGlas [Holland].—73-14326
Automation in glass recycling: a Dutch perspective.—73-14327
Changing user demands drive T&I (test and inspection) technology improvements.—73-12115
Evolution of thermal spray automation.—73-08335
How to implement microingredient batching.—73-08342
Laboratory automation in a cement plant.—73-10025
Method for flexible continuous production.—73-01797
Operational experiences of Skloobal, Ltd., Nemsova, with BDF equipment.—73-00674
POLAB laboratory automation system.—73-03518
Set of standardized units for mechanism control systems.—73-01929
State of the art of fully automatic valve-bag filling technology.—73-12065
Structure of manufacturing systems for the automation of a glass container line.—73-14505
Vetropack profits from automatic drift control.—73-10616

**automobiles,**
Automobile glasses with heat-shielding surface coating.—73-03822
Automotive design glazing and new glasses.—73-14328
Functional automotive glass. The formulation of colorants.—73-14386
Functional ceramics for automobiles.—73-01170
Glass panes for vehicles.—73-03923
Metal matrix composites in the automotive industry: opportunities and challenges.—73-06823
Metals and ceramics boost auto performance.—73-06578

**bacteria,**
Bacteriostatic and fungistatic glass powders.—73-00435

**baddeleyite,**
Baddeleyitic-corundum ramming refractories made from waste raw materials.—73-10702
Comparative quality characteristics of fused cast baddeleyite-corundum and corundum refractories.—73-14579
Controlling the solidification process of baddeleyite-corundum products.—73-03995
Effect of microcoolers on the structure and properties of melt-cast baddeleyite-corundum refractories.—73-00802
Effect of microcoolers on the structure and properties of melt-cast baddeleyite-corundum refractories.—73-00803

**balances,**
Modified STA-409/3/6 thermobalance for digital processing of T, DTA, and TG curves.—73-01917

**ball bearing,**
Ball and roller bearings and bearing components.—73-12447
Development of fracture-resistant, multilayer films for precision ball bearings.—73-06768

**ball clay,**
Benefits of Dorset ball clay in traditional whiteware applications.—73-10801

**ball mills,**
Ball milling at varied rotating speed and its optimization of process parameters—ball milling of luster tile bodies.—73-14646
Effect of ball-milling time for powder mixing of the thermomechanical properties of SiC-AlN system ceramics.—73-05753
Influence of combination of ball diameters and rotation speed on grinding performance of alumina by ball milling.—73-08345
Influence of combination of ball diameters and rotation speed on grinding performance of alumina by ball milling.—73-16835
Milling kinetics of glass-ceramic–cement in a ball mill.—73-01799
New generation of high efficiency separators for ball mills and roller presses.—73-01803
Optimum rotating speed of wet ball mills.—73-12053
Planning the work of periodic ball mills in continuous ceramic production.—73-01810
Proper techniques for the ball milling of ceramic glazes.—73-04944
Wear of media balls during the ball milling of $Si_3N_4$ powder.—73-17456

**band gap,**
Resonant nonlinear susceptibility near the GaAs band gap.—73-07773

**band structure,**
Ab initio calculation of band structure, X-ray emission, quantum yield, and electron-energy-loss spectra of hexagonal boron nitride.—73-07281
Band parameters of $Hg_{1-x-y}Cd_xMn_yTe$.—73-14781
Band structure of superlattices of semiconductors with degenerate valence band.—73-04255
Band structure of ZnO using the LMTO method.—73-16036
Electron-phonon mechanism of broadening of optical absorption bands of quasi-zero-dimensional crystals.—73-07495
Empirical pseudopotential band structure calculation for $Zn_{1-x}Cd_xS_ySe_{1-y}$ quaternary alloy.—73-07503
Energy band structure of $La_2O_3$ crystal and $F^+$, $F$ centers.—73-02265
High-$T_c$ superconductivity as consequence of overlap nondegenerate and plane bands.—73-15501
How does the chemical nature of the interface modify the band offset.—73-07570
Key features in the measured band structure of $Bi_2Sr_2CaCu_2O_{8+\delta}$: flat bands and Fermi surface nesting.—73-15527
Valence band structure of $CuInS_2$ by soft X-ray spectroscopy.—73-04507

**baria,**
BaO-1/2$Y_2O_3$-$CuO_x$ eutectic melting in air.—73-12540
Thermal stability of gels and glass-forming regions in the $B_2O_3$-$Na_2O$-$Al_2O_3$ system.—73-12896
Viscosity of glasses of the BaO-$P_2O_5$-$Al_2O_3$ system at glass-transition and annealing temperatures.—73-00572

**barite,**
Burning cement clinker from the raw meal using barite and fluorspar as a combined additive.—73-09834

**barium carbonate,**
Barium carbonate.—73-12257

**barium oxide,**
Barium neodymium titanates: stoichiometry and phase equilibria.—73-02150
Crystallographic study by Rietveld's method of barium-magnesium-tantalum-oxide-based ceramics for use as dielectric resonator. X-ray dilatometry at low temperature.—73-08593
Effect of fabrication conditions on microwave dielectric properties of BaO-$RE_2O_3$-$TiO_2$ ceramics.—73-14696
Effect of various oxide additives on sintering of BaO-$SiO_2$ system glass-ceramics.—73-03836
Electron spin resonance and Mossbauer studies on crystallization process of $BaFe_{12}O_{19}$ from barium iron borate glass.—73-13974
ESR of vanadyl ions in $Li_2O$-BaO-$B_2O_3$ glasses.—73-06914
Improvement of sinterability of $Ba(Mg_{1/3}Ta_{2/3})O_3$ [BMT] powder compacts by $BaTa_2O_6$ additions.—73-02860
Nonreducible dielectric ceramic composition.—73-01062
Structure of barium zinc aluminate glasses.—73-00416

**barium titanate,**
*c*-axis perovskite thin films grown on silicon dioxide.—73-01849
90° wall in the tetragonal phase of $BaTiO_3$-type ferroelectrics.—73-07901
Acoustic emission in $BaTiO_3$-type ferroelectric crystals in phase transition region.—73-15247
Aggregate particles produced during pyrolysis of PTC barium titanate precursor synthesized by the oxalate method.—73-17107
Analysis of irregular fluctuations in a self-pumped $BaTiO_3$ phase-conjugate mirror.—73-01073
BaO-*x*-$TiO_2$ dielectric ceramic composition.—73-04188
Barium strontium titanate photorefractive device and method for making the same.—73-11631
Ceramic capacitor with a grain-boundary-insulated structure.—73-04189
Changes in the crystal structure of rf magnetron-sputtered $BaTiO_3$ thin films.—73-02158
Changes in the crystal structure of rf magnetron-sputtered $BaTiO_3$ thin films.—73-12546
Characterization of PTCR barium titanate by impedance spectroscopy.—73-01102
Characterization of the growth of sol-gel-derived Ba-Ti-O thin films by laser Raman spectroscopy.—73-13379
Cofiring of semiconducting $(Ba,Sr)TiO_3$ and $(Ba,Pb)TiO_3$ ceramics.—73-14809
Comparison of $BaTiO_3$ optical novelty filter and photothermal lensing configurations in photothermal experiments.—73-12756
Comparison of the electrical and mechanical strengths of conventional and flux-sintered barium-titanate-based dielectrics.—73-00939
Dc electrical resistivity of Nb-doped $BaTiO_3$ and EPR measurements.—73-12762
Determination of the *c*/*a* ratio of a submicrometer-sized crystal of tetragonal barium titanate by synchrotron radiation.—73-16109
Development and fabrication of thin film $BaTiO_3$ capacitors using radio-frequency magnetron sputtering.—73-07297
Development in submicron grinding of $BaTiO_3$ powder by ball milling and its applications.—73-16700
Dielectric and ferroelectric properties of $BaTiO_3$ thin films grown by the sol-gel process.—73-11561
Dielectric and piezoelectric properties of sol-gel-derived barium titanate ceramics.—73-16443
Dielectric ceramic composition.—73-11012
Dielectric ceramic of the $Ba_{1-x}M^*_xTi_{1-y}M^{**}_yO_3$ type.—73-10931
Dielectric properties and microstructural behavior of B-site calcium-doped barium titanate ceramics.—73-02570
Dielectric properties of (Ba, Sr)O-(Sm, $La)_2O_3$-$TiO_2$ ceramics at microwave frequencies.—73-02572
Dielectric properties of Ni-doped (Ba, Sr)$TiO_3$ ceramics at very low frequencies.—73-04078
Dielectric properties of oxide-doped Ba(Ti,Sn)$O_3$ ceramics prepared from ultrafine powder.—73-16447
Dielectric relaxation in $Ba(Ti_{0.8}Zr_{0.2})O_3$ ceramics prepared from sol-gel and solid-state reaction powders.—73-01401
Effect of BN addition on the sintering and electrical properties of Y-doped $BaTiO_3$ ceramics.—73-12998
Effect of counterpropagating beams on beam fanning in $BaTiO_3$.—73-02577
Effect of crystal-axis orientation on dielectric properties of ceramics prepared from fibrous barium titanate.—73-16457
Effect of manganese addition on phase stability of hexagonal $BaTiO_3$.—73-16117
Effect of processing variables on the mechanical and electrical properties of barium titanate positive temperature coefficient of resistance ceramics: I, Additives and processing prior to sintering.—73-09091
Effect of processing variables on the mechanical and electrical properties of barium titanate positive temperature coefficient of resistance ceramics: II, Sintering atmosphere.—73-09092
Effect of soaking time on the temperature coefficient of resistivity [TCR] of semiconducting barium titanate PTCR ceramics.—73-14856
Effect of substrate temperature on the orientations of radio-frequency-sputtered $Ba_2Si_2TiO_8$ thin films.—73-16743
Effect of various dopants on the dielectric properties of barium strontium titanate.—73-04081
Effects of cerium doping on the resistivity of PTCR barium lead titanate.—73-07468
Effects of crystallization on structural and dielectric properties of thin amorphous films of (1−*x*)$BaTiO_3$:*x*$SrTiO_3$ (*x*=0–0.5, 1).—73-02591
Effects of grain-boundary structure on the resistivity phenomenon in doped $BaTiO_3$.—73-11565
Effects of isovalent and nonisovalent impurities on the ferroelectric phase transition in barium titanate.—73-07883
Effects of Mn dopant and Mn-La codopant on the sintering behavior and electrical properties of barium titanate.—73-04294
Elastic anomalies of barium titanate.—73-08609
Electric and dielectric properties of barium titanate Schottky barrier diodes.—73-07311
Electrical and microstructural properties of $BaTiO_3$ thin films on *p*-Si substrates grown by MOCVD.—73-08847
Electrical characteristics of barium titanate films prepared by laser ablation.—73-07885
Electrical properties and film structures of $(Ba_xSr_{1-x})TiO_3$ [BST] thin films by rf sputtering.—73-04085
Electrical properties of ferroelectric thin-film capacitors with different structures.—73-04549
Electronic and ionic trapping at domain walls in $BaTiO_3$.—73-17078
Evolution of interfacial microstructure between barium titanate and binary glasses.—73-06218
Fabrication of barium titanate single crystals by solid-state grain growth.—73-09128
Ferroelectric phase transition in $BaTiO_3$ films.—73-07888
Fidelity of optical phase conjugation by photorefractive degenerate four-wave mixing in barium titanate.—73-12802
Field-dependent changeover from current-to-voltage-limiting characteristics by nonlinear *n*-type $BaTiO_3$ ceramics.—73-14926
Fine-grain barium titanate for dielectric application.—73-10948
Fine-grained $BaTiO_3$ powder mixture and method for making.—73-04209
Generation of metal titanate powders by spray pyrolysis using single-source precursors.—73-09148
Grain core–grain shell structure and domain of $BaTiO_3$ ceramics.—73-05411
Grain core–grain shell structure in Nb-doped $BaTiO_3$ capacitor ceramics.—73-10952
Grain growth during liquid-phase sintering of Sb-doped $BaTiO_3$.—73-09150
Grain growth during liquid-phase sintering of Sb-doped $BaTiO_3$.—73-17138
Grain-boundary properties of oxygen hot isostatically pressed barium strontium titanate with positive temperature coefficient of resistivity.—73-01175
Grain-boundary structure of $Bi_2O_3$-diffused $BaTiO_3$ BL capacitor.—73-00974
Growth and characterization of photorefractive $BaTiO_3$ single crystal.—73-05828
Heat-generating ceramic materials of $(Ba_{0.65}Pb_{0.35})TiO_3$ semiconductors.—73-11239
High-dielectric ceramic composition.—73-04210
High-frequency dielectric constant of barium titanate.—73-16504
Humidity sensitivity of $La^{3+}$-doped $BaTiO_3$ semiconductor thin film deposited by pulsed excimer laser ablation.—73-01190
Hydrothermal $BaTiO_3$ films on silicon: morphological and chemical characterization.—73-10958
Impedance analyses of cooling-rate effects on the depletion layer of PTCR materials.—73-14972
Improvement of response speed of a $BaTiO_3$ self-pumped phase-conjugate mirror by crystal heating and beam focusing.—73-02618
Impurity-enhanced self-pumped phase conjugation in the near ir in "blue" $BaTiO_3$.—73-16513
Induced self-pumping phase conjugation in $BaTiO_3$.—73-08886

Influence on the grain-boundary interfacial trap levels in $(Ba_{0.76}Sr_{0.24})TiO_3$-based PTCR ceramics by oxidative annealing.—73-11275
Infrared reflectance spectra of doped $BaTi_4O_9$.—73-02296
Interaction between barium titanate and binary glasses.—73-05880
Joining of semiconductive $BaTiO_3$ with YBCO thick film and their interfaces.—73-15526
Junctions of Pr-Co-O thin films and semiconductive $BaTiO_3$ and their electrical properties.—73-15004
Low-fire X7R compositions.—73-11024
Measurement of charge transport parameter of photorefractive crystal barium strontium titanate $(Ba_{1-x}Sr_xTiO_3$, BST).—73-02642
Measurement of intensity-dependent absorption coefficient and transport parameter $\sigma\mu\tau$ in BST.—73-01240
Measurement of photorefractive coupling constant of $BaTiO_3$ using the varying interaction length method.—73-05064
Metallorganic resin derived barium titanate: II, Kinetics of $BaTiO_3$ formation.—73-16214
Microstructure and properties of $BaTiO_3$-Ni composite dielectrics.—73-07342
Noise reduction in image amplification in photorefractive $BaTiO_3$.—73-08928
Nonreducible dielectric ceramic composition.—73-04226
Nonreducing dielectric ceramic composition.—73-04858
Nonsteady-state photocurrent technique for the characterization of photorefractive $BaTiO_3$.—73-06265
Novel reaction path to $BaTiO_3$ by the oxidation of a solid metallic precursor.—73-04146
Optical study of domains in $Ba(Ti,Sn)O_3$ ceramics.—73-15273
Oriented barium titanate ceramics made from fiber-state powder.—73-16889
Parametric polarization of light in photorefractive $BaTiO_3$.—73-08943
Particle size effect of conductivity enhancement in $BaTiO_3$-dispersed AgI.—73-01006
Particle size effect on the room temperature structure of barium titanate.—73-12646
Perturbed-angular-correlation spectroscopy: evidence for probe-dopant interactions in Ca-doped barium titanate.—73-12648
Phase formation of $BaTiO_3$ thin films by sputtering.—73-13161
Photoelectrochemical effects of $BaTiO_3$ thin-film electrodes prepared by the sol-gel method.—73-10981
Photorefractive performances of 45°-cut $BaTiO_3$ crystals.—73-08953
Photorefractivity and related properties of $Ba_{0.984}Sr_{0.016}TiO_3$.—73-16567
Physicochemical control of $BaTiO_3$ powders and incidence on the quality of ceramic capacitors.—73-10982
Polyvinyl butyral [PVB] as a dispersant for barium titanate in a nonaqueous suspension.—73-16900
Preparation and dielectric properties of $BaTiO_3$-$Pb(Mg_{1/3}Nb_{2/3})O_3$ solid solutions.—73-16573
Preparation and dielectric properties of $BaTiO_3$-$Pb(Mg_{1/3}Nb_{2/3})O_3$.—73-05616
Preparation and optical properties of gold-dispersed $BaTiO_3$ thin films.—73-16574
Preparation and optical properties of transparent $TeO_2$-based glasses containing $BaTiO_3$ crystals.—73-03865
Preparation and optical properties of transparent $TeO_2$-based glasses containing $BaTiO_3$ crystals.—73-10472
Preparation of barium titanate particles by crystallization of glass.—73-02945
Preparation of $BaTiO_3$ films by CVD.—73-05969
Preparation of $BaTiO_3$ films by icp flash evaporation.—73-05970
Preparation of $BaTiO_3$ films by ICP flash evaporation.—73-16917
Preparation of monodispersed $BaTiO_3$ powders by hydrolysis of Ba/Ti bimetallic alkoxide.—73-02956
Preparation of monodispersed $BaTiO_3$ powders by hydrolysis of Ba/Ti bimetallic alkoxide.—73-13194
Preparation of porous $BaTiO_3$ PTC thermistors by adding graphite porosifiers.—73-15113
Preparation, microstructure, and ferroelectric properties of laser-deposited thin $BaTiO_3$ and lead zirconate titanate films.—73-11603
Production of barium titanate thin films.—73-15957
Production processes of positive temperature coefficient [PTC] $BaTiO_3$ ceramics.—73-15118
PTCR characteristics of semiconducting (Ba, Ca)$TiO_3$ ceramics fired in reducing-reoxidizing atmospheres.—73-15127
Raman spectroscopy of PTC $(Ba_{1-x}Sr_x)TiO_3$ ceramics.—73-05469
Reaction kinetics and grain growth behavior in $BaTiO_3$-$SrTiO_3$-$CaTiO_3$ ceramics.—73-17189
Reaction sintering and dielectric properties in the $BaTiO_3$-$CaZrO_3$-$TiO_2$ system.—73-13229
Recent developments in understanding grain-boundary electric and dielectric properties of PTCR barium titanate ceramics.—73-01298
Resistivity and permittivity for (Ba,Pb)$TiO_3$ PTCR ceramics.—73-15285
Role of porosity on PTCR characteristics of semiconducting [Y-doped] $BaTiO_3$ ceramics.—73-11425
Rotational invariant pattern recognition with the method of circular harmonics using a $BaTiO_3$ crystal.—73-08965
Semiconducting barium titanate ceramics prepared by boron-containing liquid-phase sintering.—73-04477
Sintering and dielectric properties of $BaTiO_3$-Ni composite ceramics.—73-04168
Sintering and dielectric properties of $BaTiO_3$-Ni composite ceramics.—73-10988
Sol-gel synthesis of barium titanate powders of various compositions.—73-13281
Solubility of lanthanum oxide in barium titanate.—73-02435
Stability and processing of aqueous $BaTiO_3$ suspension with polyacrylic acid [PAA]: effect of pH.—73-03026
Strength and fracture toughness of barium titanate ceramics.—73-13591
Structural change and sintering behavior of $BaTi_5O_{11}$ coating film derived from metal alkoxide.—73-09342
Structural change and sintering behavior of $BaTi_5O_{11}$ coating film derived from metal alkoxide.—73-17010
Structural properties of $BaTiO_3$ thin films on Si grown by metallorganic chemical vapor deposition.—73-01668
Structural study of epitaxial $BaTiO_3$ crystals.—73-08755
Structure of organometallic chemical vapor deposited $BaTiO_3$ thin films on $LaAlO_3$.—73-06291
Structures of the ferroelectric phases of barium titanate.—73-01435
Synthesis of $Ba_2Ti_9O_{20}$ by coprecipitation process and the effect of $ZrO_2$ addition.—73-17033
Synthesis of $BaTiO_3$ and ZnO varistor precursor powders by reaction spray pyrolysis.—73-11473
Synthesis of nanocrystalline materials of composite oxides based on $BaTiO_3$ by using stearic acid-sol method.—73-17042
Synthesis of single-crystal barium titanium isopropoxide complex to form barium titanate.—73-06097
Thickness of cubic surface phase on barium titanate single-crystalline grains.—73-12724
Transition of compensating defect mode in niobium-doped barium titanate.—73-06179
Transmissive effect in $BaTiO_3$ self-pumped phase conjugators.—73-09001
Two-wave coupling and self-pumped phase conjugation at near-ir wavelengths in $BaTiO_3$.—73-09003
Varistors based on *n*-$BaTiO_3$ ceramics.—73-07857
Wetting behavior of fresnoite and sphene on $BaTiO_3$ ceramics.—73-13464

**barium,**
Adsorption of sulfonic acid doped poly(vinyl chloride) on barium ferrite particles.—73-01448
Anion transport in $Ba_{0.5}Ce_{0.5}F_{2.5}$ single crystal with spatially oriented fluctuations of composition.—73-17072
Anionic vacancy distribution in reduced barium-lanthanum ferrites: $Ba_xLa_{1-x}FeO_{3-x/2}$ $(1/2 \le x \le 2/3)$.—73-03121
Anisotropy of thermopower and electric conductivity in single-crystal $EuBa_2Cu_3O$ at hydrostatic pressures up to 12 kbar.—73-07985
$BaBiO_{2.5}$: a new bismuth oxide with a layered structure.—73-02147
Bandwidth and beam quality of barium borate parametric oscillator synchronously pumped by an active-passive mode-locked Nd:YAG laser.—73-08812
Barium aluminosilicate glass-ceramics by a sol-gel route.—73-14329
Barium aluminosilicate glasses.—73-14534
Barium hexaaluminoferrites with new structural features.—73-01450
CDW suppression and photoinduced gap states in $BaBiO_3$.—73-02156
Coated metal article.—73-03676
Composition dependence of carrier concentration and conductivity in $(Ba_{1-x}Sr_x)PbO_{3-\delta}$ system.—73-08827
Content of oxygen and bismuth(V) in the double oxides of barium and bismuth.—73-01511
Continuous-wave sum-frequency generation near 194 nm with a collinear double enhancement cavity.—73-08830
Contributions to the dielectric constant of the system $BaLn_2Ti_4O_{12}$ from packing fraction and nephelauxetic ratio.—73-07290
Crystal chemistry and phase equilibrium studies of the $BaO(BaCO_3)\cdot 0.5R_2O_3$-$CuO_x$ systems in air: VI, R=neodymium.—73-16076
Crystal structure of $BaCuO_2$.—73-02190
Crystal-field phonon interaction and in-plane charge transfer in $NdBa_2Cu_3O_{7-\delta}$.—73-04691
Crystallization and formation of pressure-induced amorphous barium metaborate.—73-08589
Crystallization in a barium-containing magnesium aluminosilicate glass-ceramic—correction.—73-07113
Crystallization of sol-gel-derived barium aluminosilicate in a 2.45-GHz microwave field.—73-05725
Delta-H plot evaluation of remanence behavior in barium ferrite tapes and disks.—73-04603
Effect of $Al_2O_3$ and $Bi_2O_3$ on the formation mechanism of Sn-doped $Ba_2Ti_9O_{20}$.—73-08603
Effect of $BaWO_4$ on the microwave dielectric properties of $Ba(Mg_{1/3}Ta_{2/3})O_3$ ceramics.—73-07303
Effects of oxygen partial pressure and substrate temperature on the in situ growth of the $Ba_{1-x}Rb_xBiO_3$ films by laser ablation.—73-08046
Electrical conduction in $BaBiO_{3-x}$ at high temperatures.—73-02596
Electronic structures of $BaB_2O_4$ and $LiB_3O_5$.—73-02609
Emission life and surface analysis of barium-impregnated thermionic cathodes.—73-10945
Energy distribution of gaps in $GdBa_2Cu_3O_7$.—73-08057
Enhanced surface crystallization of ß-barium borate [BBO] on glass due to ultrasonic treatment.—73-03839
Erasure and noise study in barium ferrite tape media.—73-04610
Evaluation of strength and edge flaw severity of barium borosilicate glass substrate by thermal downshock testing.—73-03788
Evaluation of strength and edge flaw severity of barium borosilicate glass substrate by thermal downshock testing.—73-14183
Evidence for new phases in Ln-doped $La_{1.875}Ba_{0.125}CuO_4$ (Ln=Nd, Sm).—73-08620
Fabrication of $Ba_{1-x}K_xBiO_3$ superconductors [$T_c$=28.5 K] prepared by the plasma-arch melting and rapid quenching method.—73-01548
Features of cation distribution in aluminum-substituted barium hexaferrites.—73-16147
Ferroelectric aluminotitanobarium materials with modifying additives.—73-01411
Ferroelectricity in barium sodium tantalate [BNT], $Ba_2NaTa_5O_{15}$.—73-07890
Formation and decomposition of $BaCuO_{2.5}$ prepared from a mixture of nitrates.—73-02831
Formation of solid solutions of $Bi_2Sr_{2-x}Ba_xCa_{1-y}Nd_yCu_2O_{8+\delta}$.—73-15481
Frequency dependence of the ferromagnetic resonance linewidth and effective linewidth in manganese-substituted single-crystal barium ferrite.—73-01463
Giant suppression of flux-flow resistivity in heavy-ion-irradiated $Tl_2Ba_2Ca_2Cu_3O_{10}$ films: influence of linear defects on vortex transport.—73-09408
Granulation of barium ferrite in the fluidized bed.—73-11656
Growth and characterization of ferroelectric $BaMgF_4$ films.—73-01416
Growth of $DyBa_2Cu_3O_{7-x}$ thin films on vicinal (100)$SrTiO_3$ substrates.—73-06224
High-efficiency, high-power-difference frequency generation of 0.9–1.5-µm light in BBO (ß-$BaB_2O_4$).—73-08879
High-field effective linewidth and eddy current losses in moderate conductivity single-crystal M-type barium hexagonal ferrite disks at 10–60 GHz.—73-07938
Hot-pressing and high-temperature mechanical properties of $BaAl_2Si_2O_8$ (BAS) and $SrAl_2Si_2O_8$ (SAS).—73-09614
Incommensurate-commensurate phase transition of $BaZnGeO_4$ studied by electron microscopy and diffraction.—73-12601
Influence of $Nd_2O_3$ doping on the reaction process and sintering behavior of $BaCeO_3$ ceramics.—73-16837
Irreversible phenomena in the absorption of electromagnetic field in HTSC plates.—73-08117
Long-wavelength infrared spectra of $Bi_2Sr_2Ca_{0.6}Ba_{0.4}Cu_1{}_9O_x$ in the glassy and crystalline (superconducting) states.—73-01588
Luminescence and nonlinear optical properties of barium fluoromolybdate $(Ba_2MoO_3F_4)$.—73-05589
Luminescence in the pentaborate $LiBa_2B_5O_{10}$.—73-02630
Magnesium location in the barium-magnesium-iron Y-type hexagonal ferrite.—73-07947
Magnetic encoder having a magnetic recording medium containing barium ferrite.—73-11675
Magnetic ordering of $Dy^{3+}$ sublattice in tetragonal single crystal $DyBa_2Cu_3O_{6.2}$.—73-16206
Magnetic structure of $Ho_2BaNiO_5$.—73-07957
Mechanical properties of barium-mica-containing glass-ceramics.—73-00513
Mechanism of introduction of yttrium ions into barium cuprates, $Ba_2Cu_3O_x$.—73-01602
Method for investigating the reversal properties of isolated barium ferrite fine particles utilizing magnetic force microscopy (MFM).—73-05066
Microstructure and microwave characteristics of $Ba\{(Mg,Co)_{1/3}Nb_{2/3}\}O_3$-based dielectrics.—73-00995
Modulation structures and new type of twin boundary in Bi-Sr-Cu-O system doped with Ba.—73-11840
Mossbauer spectroscopic studies of glass-ceramics with hexagonal barium and strontium ferrites.—73-00669
New barium titanium(III) pyrophosphate: $BaTi_2(P_2O_7)_2$.—73-02349
Novel $R_2Ba_{1.25}NiO_{5.25}$ (R=Tm, Yb, Lu) structure type.—73-02363
Oxide superconductor Bi-Sr-Ca-Mg-Ba-Cu-O.—73-01727
Oxide superconductor comprising $BaBO_3$ (where B is Zr, Sn, Ce, or Ti).—73-01728
Physical properties of a new barium niobium sulfide, $BaNb_2S_5$.—73-02668
Polar-oriented crystallization of fresnoite $(Ba_2TiSi_2O_8)$ on glass surface due to ultrasonic treatment with suspensions.—73-14072
Powerful femtosecond pulse generation by chirped and stretched pulse parametric amplification in BBO crystals.—73-08956
Preparation and characterization of radio-frequency-sputtered $Ba_2Si_2TiO_8$ thin films.—73-07911
Preparation and characterization of thin films of M-type barium ferrite on microcrystalline carbon substrates with diffusion barrier sublayers.—73-04636
Preparation and crystal structures of new barium zirconium sulfides, $Ba_2ZrS_4$ and $Ba_4Zr_2S_7$.—73-02400
Preparation of metal-substituted hexagonal barium ferrite with organic precipitant method.—73-05975
Principles involved in the formation of solid solutions of glass-ceramics in the strontium-barium system.—73-09275
Processes of magnetron dusting of films of yttrium-barium ceramics of composition 123, 247, and 124.—73-11875
Properties of epitaxial Ba hexaferrite thin films on *A*-, *R*-, and *C*-plane-oriented sapphire substrates.—73-04642
Properties of large area $ErBa_2Cu_3O_{7-x}$ thin films deposited by ionized cluster beams.—73-01642
Protonic and oxide ionic conduction in $BaCeO_3$-based ceramics: effect of partial substitution for Ba in $BaCe_{0.9}Nd_{0.1}O_{3-\alpha}$ with Ca.—73-04156
Radiation defects and thermoluminescence of barium fluoride.—73-16582
Raman spectroscopy of $BaRuO_3$.—73-05468
Raman study of both phases of $BaB_2O_4$.—73-08719
Recording characteristics of acicular barium ferrite particulate medium with perpendicular magnetic anisotropy.—73-04645
Rubidium beam flux dependence of film properties of $Ba_{1-x}Rb_xBiO_3$ deposited by molecular beam epitaxy using distilled ozone.—73-13243
Secondary ion mass spectrometric analysis of anisotropic oxygen self-diffusion in barium hexaaluminate single crystals.—73-13367
Signature of linear (Bulaevskii-Ginzburg) domain walls near $T_c$ of Ba hexaferrite.—73-04650

Stable three-frequency quasi-periodicity in conductivity oscillations of BSN crystals.—73-16600
Structural and magnetic studies on $PrBa_2Cu_2NbO_{8-y}$.—73-08745
Structural properties of rf-magnetron-sputtered $Ba_{1-x}Sr_xTiO_3$ thin film.—73-13451
Structure and chemistry of $Ba_{0.6}K_{0.4}BiO_y$ at high temperatures.—73-02458
Superconducting properties of Ba-doped (Bi,Pb) 2223 tapes.—73-01675
Superconductivity of the Ba-doped $Bi_2Pb_2Sr_2Ca_2Cu_3O_y$ system.—73-04816
Synthesis and characterization of perovskite-type $BaTl_{0.5}Sb_{0.5}O_3$ and $BaTl_{0.5+x}Sb_{0.5-x}O_{3-x}$.—73-01340
Synthesis of barium hexaferrite superfine powder by means of the glass crystallization technique.—73-03042
Synthesis of nanosized barium ferrite particles using an inorganic dispersing phase.—73-04659
Temperature dependence of corrosion of refractories in barium borosilicate glass melts.—73-07225
Terrace structures in $DyBa_2Cu_3O_{7-x}$ grown in a magnetic field.—73-03208
Thin films of barium ferrite with perpendicular magnetic anisotropy produced by laser ablation deposition.—73-01483
Transport properties of $Ba_{1-x}K_xBiO_3$ single crystals.—73-09425
Tunneling studies of $BaPb_{0.75}Bi_{0.25}O_3$.—73-12903
Vibrational study of $R_3BaNiO_5$ (R=Y, Ho, Er, or Tm), $NiO_6$ 1-D chains, and $Tm_2BaNiO_5$ pyramids.—73-08790
Weak ferromagnetism in $BaIrO_3$.—73-07982

**barriers,**
Compatibility of cathodic protection systems with bentonite containment barriers.—73-17217
Diffusion barrier properties of TiN films for submicron silicon bipolar technologies.—73-11140
Effect of interface states on applied voltage dependence of double Schottky barrier: I, Theoretical calculation.—73-16460
Photosensitivity of surface-barrier InP structures with microrelief interface.—73-15101
Superposed multiquantum barriers for InGaAlP heterojunctions.—73-01332

**basalt,**
Application of basalts in ceramic glazes: III, Influence of addition of $B_2O_3$/sodium feldspar mixtures.—73-14643
Basalt-block heat-storage plant.—73-12315
Behavior of basalt fibers in high alumina cement matrix.—73-00028
Characterization and electrical properties of some materials obtained from natural beach sand of the Canary Islands.—73-15897
Effect of chlorides and fluorides on leaching of basalt fibers. Features of formation of porous structure in hydrothermal conditions.—73-16455
Features of leaching and sorption-structural properties of basalt fibers.—73-16497
Glass-ceramics from altered basalt-clay mixtures.—73-14396
Immobilization of simulated high level nuclear wastes with tholeiite-type basalt.—73-04891
Immobilization of simulated high-level nuclear wastes [HLNW's] with tholeiite-type basalt.—73-15701
Nucleation and crystallization mechanism of glasses obtained from Canarian basaltic rocks.—73-14444
Strength properties of basalt fibers.—73-00548
Volume stability of escolaite materials corroded by basalt melt.—73-04026

**basic,**
Acid/base properties of oxide, oxide glass, and glass-ceramic surfaces.—73-02549
Methylbutenol: a new and simple diagnostic tool for acidic and basic sites of solids.—73-01915

**batch,**
Batch composition for unfired bricks.—73-09826
Batch formula for saving energy and increasing production of tunnel kiln.—73-10800
Batch handling for glass furnaces.—73-14330
Batch treatment plant for container glass.—73-07109
Chemical, phase, and enthalpy balance of changes in the preheated batch for Eutal glass: I, Determination of the mass balance of the escape of gas reaction products.—73-00595
Chemical, phase, and enthalpy balance of changes in the preheated batch for Eutal glass: II, Determination of phase and enthalpy changes.—73-00596
Complete [glass] batch house concept.—73-00600
General algorithm for calculating batches in the ceramic industry.—73-08339
Glass batch charger having seals which prevents accumulation of batch.—73-04973
Heating process of glass batch.—73-14402
How to implement microingredient batching.—73-08342
In situ replaceable pusher bar for a batch charger pan.—73-01857
Melting behavior of batch blanket in glass-melting tanks.—73-14424
Method of feeding glass batch to a glass-melting furnace.—73-00745
Minimizing glass batch costs through linear programming.—73-07152
Nested process controls for a critical process with large batch size.—73-08352
Physicochemical characteristics of the hydroxopolymer method of synthesizing glass batches of multicomponent compositions.—73-00679
Problem-free batch plant for Finnish fibermaker.—73-14479
Programmable logic takes control [for glass batch plant].—73-01822
South Korean installation.—73-14499
Spanish batch plant success.—73-00704
Step-by-step approach to batch house automation.—73-01831
Thermal behavior of glass batch on batch heating.—73-03895

**batteries,**
Characteristics of heat-treated polyparaphenylene (PPP) at 973 K as an anode of lithium battery.—73-10920
Ion-conducting glasses—potential solid electrolytes for dry cell batteries.—73-00983
Materials for electrochemical energy conversion and storage systems.—73-07337
Performance characteristics of silver cerium vanadate batteries.—73-07349
Recharging ceramics.—73-10986
Safe, economic lithium metal-free rechargeable batteries.—73-14729

**bauxite,**
Bauxite processing.—73-12309
Bauxite.—73-12258
Development of reinforced porcelain using high-alumina bauxite.—73-07244
Effects of caustic concentration and bauxite composition on economics of Bayer alumina plants.—73-15722
Introduction of bauxite into batch formula of porcelain body.—73-10860
Method of making ceramic microspheres.—73-02051
New high-quality Chinese bauxite.—73-12289
Reactive sintering of zircon and alumina/bauxite.—73-09505
Strength development of bauxite-based ultralow-cement castables.—73-10771

**bearings,**
Comet-shaped carbides in the uppermost surface layer of bearings.—73-05372
Composite bearing structure.—73-12452
Crack detection in ceramic bearings by acoustic emission [AE] signals.—73-09553
Improved superconducting magnetic rotary bearings.—73-11795
Levitation pressure and stiffness of a high-$T_c$ superconducting bearing in field-cooling process.—73-01586
Method for manufacturing a diamond thrust bearing.—73-05312
Proof about molecular bearings.—73-16575
Roller body, method of its manufacture, and of [coated ceramic] roller or plain bearings.—73-16015
Superconducting coil bearings for rotor load.—73-04873

**belite,**
Active belite cement.—73-09805
Belite cement from barium-containing byproduct.—73-09830
Crystal structure and hydration of belite.—73-09876
Development of aluminobelitic colored clinkers.—73-09889
Effect of Al/Fe ratio in belite on the microtexture induced by the remelting reaction.—73-16115
Effect of $SO_3$ and MgO on phase relations and crystal chemical state of phases in belite–aluminoferrite clinkers.—73-09917
Heat of hydration and strength development of alite–belite–blast-furnace slag composite.—73-09980
Heat of hydration and strength development of alite–belite–blast-furnace slag composite.—73-09981
Industrial tests of belite clinker production and evaluation of properties of cements obtained with this clinker.—73-10000
Kinetics of the radiation-thermal $C_2S$ [dicalcium silicate] synthesis.—73-10024
Microtextures formed by the remelting reaction in belite crystals.—73-03178
Orientation of coherent interphase boundaries formed by the $\alpha$-to-$\alpha'_H$ phase transition in belite crystals.—73-08683
Properties of concrete using low-heat cement containing large amount of belite.—73-10110
Relationship between zonal structure in alite, lamellar texture in belite, and their production process, composition, and crystal structure.—73-10137
White belitic portland cements.—73-06732

**belt,**
New developments in belt conveyor systems.—73-12048

**bending,**
Alternating bending load behavior of unidirectionally fiber-reinforced glasses.—73-03774
Anomalous band bending in metal/InP interface formation.—73-01077
Behavior of mirrorlike region of sintered $Si_3N_4$ under rotary bending and static fatigue.—73-06328
Bending glass sheets.—73-04959
Continuous furnace for heating glass panes to bending and/or toughening temperature.—73-12248
Device for bending glass sheets using fluid barrier.—73-12075
Effects of edge effects on sheet glass bending strength.—73-00470
Making bent chilled items.—73-00655
Method and apparatus for controlling the temperature of glass sheets in press bending.—73-10641
Method for bending and tempering a glass sheet.—73-00740
Process and device for the production of curved glass sheets.—73-00755

**beneficiation,**
Beneficiation of calcium borate minerals.—73-01847
Ceramics from wastes of fluorite beneficiation mills.—73-00898
Introducing separate beneficiation technology for magnesites at the Magnezit Combine.—73-01794
Testing the beneficiation capacity of Vietnam sillimanite-kyanite ores.—73-01998

**bentonite,**
Application of bentonite to building paint.—73-12256
Compatibility of cathodic protection systems with bentonite containment barriers.—73-17217
Modified bentonite.—73-05150
Setting of spheres in clay suspensions.—73-13251

**beryllia,**
Beryllia.—73-12259
Beryllium mineral paragenesis in the beryllia/water chemical potential diagram.—73-16037
Diamond grown on single-crystal beryllium oxide.—73-03129
Ground state parameters of *F* center in BeO.—73-16162
Influence of manufacturing conditions on the characteristics of SiC ceramics with addition of BeO.—73-02869
Raman scattering [RS] of light by surface polaritons [SP's] coherently excited on a rippled BeO crystal.—73-12667
Using SPC for the dry pressing of beryllia parts.—73-04183

**beryllium,**
Be diffusion at the emitter-base junction of graded AlInAs/GaInAs heterojunction bipolar transistors.—73-07389
Characteristics of heavily Be-doped GaAs layers grown by molecular beam epitaxy.—73-11098
Distributions of the concentrations of shallow and deep charged centers in the InP layers doped by implantation of Be ions.—73-04284
Electrical and thermal conductivity of AlN ceramics doped with beryllium and oxygen.—73-08851
Enhanced radiative adsorption of thin, heavily beryllium-doped GaAs films.—73-04319
Infrared studies of Be-doped GaAs grown by molecular beam epitaxy at low temperatures [LT].—73-14991
Phase diagram of the subsolidus region of the quasi-binary system $BeAl_2O_4$-($BeFe_2O_3$).—73-16247
Scintillation and thermoluminescence properties of beryllium phosphate glasses containing cerium.—73-00543
Thermal characteristics of alexandrite fluorescence decay at high temperatures, induced by a visible laser diode emission.—73-02704

**binders/binding,**
Binder degradation and redistribution during pyrolysis of ceramic injection moldings.—73-09023
Binder distribution in macro-defect-free cements: relation between percolative properties and moisture absorption kinetics—correction.—73-06628
Binders for forming a ceramic sheet and applications thereof.—73-01848
Binding and plasticizing agent for preparing carbon-containing, refractory, ceramic materials, and material prepared therewith.—73-14633
Ceramic binder and use thereof.—73-04961
Ceramic/distillable binder compositions.—73-12350
Chloride binding capacity [CBC] and binding isotherms of OPC [ordinary portland cement] pastes and mortars.—73-00037
Debinding of ceramics.—73-02762
Development and evaluation of binders for high-strength concrete.—73-09887
Direct observation of preceramic and organic binder decomposition in 2-D model microstructure.—73-13388
Effect of functionalities of binders on rheological behavior of alumina suspensions and properties of green sheets.—73-16726
Ethylene oxide/propylene oxide block copolymers as green binders for ceramics.—73-15942
Examination of the durability of anhydrite binder activated with portland cement and potassium sulfate.—73-09954
Features of the preparation and transport of concrete mixes in modern binders.—73-13723
Fibrous glass binders.—73-14537
Gas concrete products with lime-containing binder based on solid wastes of soda industry.—73-00096
Guanidine-based vehicle/binders for use with oxides, metals, and ceramics.—73-04978
Hardening processes for some refractory binding systems—kinetic considerations and mechanisms.—73-14593
Heat treatment of resin-bonded refractories in an atmosphere of volatilization and decomposition products of the binder.—73-04006
Heat-resistant compositions based on a three-component binder suspension.—73-10733
High-efficiency cementless binders made of ash and slag wastes of thermal power stations and concretes based on them.—73-00100
High-strength alkali-steel–iron-slag binder.—73-13729
Hydraulic binders based on condensed silica fume and slaked lime.—73-13732
Hydromechanical activation of binder hardening.—73-13733
Influence of various hydraulic binders on performance of very low porosity cementitious systems.—73-03490
Intensive separating technology for the production of concretes with a filled lime binder.—73-13742
Method of extracting binders by rubber pressing method.—73-02894
Method of extracting binders by rubber pressing method.—73-13134
Minimization of binder content for production of injection-molded aluminum nitride parts.—73-09211
New binder program for spray-dried and pressed technical ceramics.—73-04931
New technique for economical manufacture of cement-based binders.—73-13757
Polyethylene glycol [PEG] binders for advanced ceramics.—73-09247
Polysaccharide-based additives in plaster binders.—73-10084
Preliminary organic binder removal from castings.—73-01817
Principles of the determination of concrete composition based on binders with low water consumption.—73-13766

Production of binding materials using coal gangue.—73-10102
Production technology of binders made of phosphogypsum.—73-13768
Progress in the development of binders: I, The process.—73-13220
Removal of polymethyl methacrylate binder from alumina using conventional and/or microwave heating.—73-06019
Rheological properties of plastic aluminum nitride mixes containing anhydrous binders.—73-02999
Tribochemical aspects of producing binders for refractory coatings.—73-00881
Using sulfite waste lye as binder for architectural pottery.—73-09797

**bioceramics,**
Antimicrobial ceramics.—73-05154
Apatite coating on organic polymers by a biomimetic process.—73-16656
Applications of ion-implanted glasses for biomedical uses.—73-03708
Applications of porous bioceramics in surgery.—73-15918
Bioactive glass-ceramic containing anothite and diopside crystals.—73-13929
Bioactive glasses.—73-03709
Bioactivity of $Fe_2O_3$-containing CaO-$SiO_2$ glasses: in vitro evaluation.—73-14136
Bioceramics: elaboration and properties.—73-12541
Bioglass-ceramics in medicine.—73-14331
Bioinert $Al_2O_3$ ceramics for medical purposes.—73-05157
Bone induction method.—73-12341
Calcium phosphate ceramics as biomaterials.—73-12316
Carbofilm: present and future applications in biomedical devices.—73-08526
Carbon materials in medicine.—73-08527
Ceramic filter: synthesis and applications for bioseparation.—73-12319
Ceramics for cancer treatments.—73-03710
Chemical interaction of bioactive glass-ceramics with a simulated body fluid.—73-03713
Clinical applications of calcium phosphate biomaterials: a review.—73-08507
Composite materials in medicine.—73-05164
Controlling bioactive glass-ceramic crystal structure by thermal radiation.—73-07112
Development of artificial biological glass-ceramic bones.—73-14348
Development of new biomagnetic materials.—73-15313
Drug-impregnated ceramic.—73-15941
Dynamic fatigue of beta tricalcium phosphate bioceramics.—73-09572
Effect of annealing of vials on glass-dust contamination of medical preparations.—73-07123
Effects of Al/P composition ratio on the crystallization of MgO-CaO-$Al_2O_3$-$SiO_2$-$P_2O_5$ bioglass-ceramic system—[comment].—73-14366
Effects of Al/P composition ratio on the crystallization of MgO-CaO-$Al_2O_3$-$SiO_2$-$P_2O_5$ bioglass-ceramic system—[reply to comment].—73-14367
Effects of Al/P composition ratio on the crystallization of MgO-CaO-$Al_2O_3$-$SiO_2$-$P_2O_5$ bioglass-ceramic system.—73-13970
ESCA study of the surface layers on bioactive glass after the interaction with simulated body fluid.—73-13980
Evolution of total hip prostheses.—73-09715
General aspects of biotechnological ceramics.—73-05169
Glass fibers with improved biological compatibility.—73-14540
Implant tracking, surveillance, and retrieval.—73-03396
In vitro investigations of implant material solubility.—73-17224
Influence of modifying additions on the crystallization of bioactive glasses containing apatite, wollastonite, and $AlPO_4$.—73-14411
Insert for identifying an implantable ceramic joint head.—73-02045
Ion implantation for biomaterials.—73-10244
Medical applications of calcium phosphate bioceramics.—73-02015
Medical ceramics based on hydroxyapatite.—73-02016
Nanoparticulate drug delivery system.—73-16546
New developments in bioceramics.—73-05175
Novel bioactive materials derived from glasses.—73-14443
Phosphate glass cement.—73-12392
Porous glass carrier for DNA synthesis.—73-03752
Porous glass carrier for immobilization of brewer's yeast.—73-03753
Preparation and magnetic properties of Ca-P-Si-FeO-O glass-ceramics.—73-15359
Preparation of calcium phosphate fibers for applications to biomedical fields.—73-10577
Properties of ceramic implants for stomatology.—73-08522
Recent progress in glass-based materials for biomedical applications.—73-00540
Resorbable bioactive phosphate-containing cements.—73-05243
Wear and friction properties of prosthetic joint materials evaluated on a reciprocating pin-on-flat apparatus.—73-09692
Zeolite compositions.—73-05253

**birefringence,**
Characterization of stress in semiconductor wafers using birefringence measurements.—73-07411
Circular birefringence in zinc-blende-type semiconductors.—73-14808
Magnetoreflection of birefringent crystals.—73-16534
Nature of the birefringence of microporous glasses.—73-00520

**bismuth oxide,**
$BaBiO_{2.5}$: a new bismuth oxide with a layered structure.—73-02147
$Bi_2O_3$-$Sb_2O_3$ binary system.—73-11694
Characterization of insulating boundary layers of BL [barrier layer] capacitors.—73-07287
Composition for metallizing ceramics.—73-03680
Conduction properties of grain boundary in $SrTiO_3$-$Bi_2O_3$ capacitors.—73-00940
Conduction properties of grain boundary in $SrTiO_3$-$Bi_2O_3$ capacitors.—73-10926
Correlation of the electrical and optical properties of thin films of $V_2O_5$-$Bi_2O_3$.—73-12761
Crystal chemistry underlying ferroelectricity in $Bi_4Ti_3O_{12}$, $Bi_3TiNbO_9$, and $Bi_2WO_6$.—73-01397
Dc conductivity and hopping mechanism in $Bi_2O_3$-$B_2O_3$ glasses.—73-10427
Determination of crystal structure of $Bi_2Cd_4O_7$ by powder roentgenography technique.—73-16107
Dielectric properties of some compounds with mixed bismuth oxide layer structure derived from $Bi_7Ti_4NbO_{21}$.—73-12766
Effect of $Bi_2O_3$ on dielectric properties and temperature characteristics of $[BaTiO_3]_{0.9}$+[$BaZrO_3$, $SnO_2$, $La_2O_3$, $ZrO_2$]$_{0.1}$.—73-10935
Effect of bismuth oxide addition on the electrical properties of zirconia magnesia solid electrolytes.—73-07304
Effect of heat treatment on the magnetic properties of a rapidly quenched ZnO-$Bi_2O_3$-$Fe_2O_3$ system.—73-15316
Electrical behavior of the $MnO_2$-doped ZnO-$Bi_2O_3$ system.—73-16473
Electrical conduction in $BaBiO_{3-x}$ at high temperatures.—73-02596
Electrical conductivity of $V_2O_5$-$Bi_2O_3$-$TeO_2$ glasses.—73-04305
Electrical conductivity of $V_2O_5$-$Bi_2O_3$-$TeO_2$ glasses.—73-14173
EXAFS investigation of the coordination state of germanium in $xBi_2O_3$-(100–$x$)$GeO_2$ glasses.—73-06915
Experimental effects of light intensity modulation on the recording and erasure of holographic gratings in BSO crystals.—73-16495
Fabrication of $Ba_{1-x}K_xBiO_3$ superconductors [$T_c$=28.5 K] prepared by the plasma-arch melting and rapid quenching method.—73-01548
Fracture toughness of doped bismuth oxide electrolytes.—73-09602
High-frequency terminal resonance in ZnO-$Bi_2O_3$-based varistors.—73-11244
High-temperature superconductivity in $BaPb_{1-x}Bi_xO_3$ system.—73-15503
Holographic characteristics of doped BTO crystals.—73-16508
Low-fire Bi-based dielectric ceramics for microwave use.—73-07334
Low-temperature [20-K] ir reflection spectra of $Bi_{12}SiO_{20}$ crystals.—73-16201
Massive transformation in the $Y_2O_3$-$Bi_2O_3$ system.—73-12625
Method for forming a Bi-containing superconducting oxide film on a substrate with a buffer layer of $Bi_2O_3$.—73-04844
Method of preparing bismuth oxide superconductor comprising heating under a reduced pressure.—73-01721
Microanalytical determination of ZnO solidus and liquidus boundaries in the ZnO-$Bi_2O_3$ system.—73-12630
Phase equilibria and crystal chemistry in portions of the system SrO-CaO-1/2$Bi_2O_3$-CuO: V, The system SrO-CaO-1/2$Bi_2O_3$.—73-16248
Polarization state evolution and eigenmode switching in photorefractive BSO.—73-16571
Real-time holographic photoelasticity using BSO.—73-05082
Reflection holographic gratings in [111] but $Bi_{12}TiO_{20}$ crystal for real-time interferometry.—73-12875
Rubidium beam flux dependence of film properties of $Ba_{1-x}Rb_xBiO_3$ deposited by molecular beam epitaxy using distilled ozone.—73-13243
Series of "infinitely adaptive phases" in the $Bi_2O_3$-$TeO_2$ system.—73-02427
Stable and metastable phase relations in the system $Bi_2O_3$-$SiO_2$.—73-02445
Structural change due to thermal treatment and dielectric properties of anodic oxide films of bismuth.—73-08747
Superconducting $Ba_{1-x}K_xBiO_3$ thin films and junctions.—73-11913
Thermoelectric power studies of bismuth oxides and mixed oxides based on bismuth oxides.—73-12898
Thresholding of two facing double phase conjugate mirror and semilinear phase conjugate mirror with fanning in BTO [$Bi_{12}TiO_{20}$].—73-08999
Traps and recombination centers in pure and Co-doped $Bi_{12}SiO_{20}$ crystals.—73-16643
Using internal friction technique to study defects in [pure and] Cr- and Al-doped $Bi_{12}SiO_{20}$ [single crystals].—73-17106

**bismuth strontium calcium copper oxide (Bi-Sr-Ca-Cu-O),**
$J_c$ and flux pinning of Ag-sheathed Bi(2223) tape at 15–77 K.—73-04750
(Nb,Ti)$_3$Sn superconducting magnet operated at 11 K in vacuum using high-$T_c$ (Bi, Pb)$_2Sr_2Ca_2Cu_3O_{10}$ current leads.—73-15562
110-K $Bi_2Sr_2Ca_2Cu_3O_x$ superconductors by Pb and Sb doping.—73-04780
45° grain-boundary junctions in (001)-oriented BiSrCaCuO films.—73-15483
Ac conductivity in $Bi_4Sr_3Ca_3Cu_4O_x$ (y=0–5) and $Bi_4Sr_3Ca_{3-z}Li_zCu_4O_x$ (z=0.1–1) semiconducting oxide glasses.—73-07984
Alternating current susceptibility of $Bi_2Sr_2CaCu_2O_x$ single crystal in dc magnetic field up to 4 T.—73-11684
Anisotropic changes induced by ion irradiation on Bi-based high-$T_c$ superconductors.—73-15386
Anisotropy of the electronic states around Cu in $Bi_2Sr_2CaCu_2O_{8+y}$.—73-05356
Annealing effect on critical temperature and resistivity of (Bi,Pb)$_2Sr_2Ca_2Cu_3O_x$ superconductor irradiated by Co-60 gamma rays.—73-11689
Annealing effects on $T_c$ in $Bi_2Sr_2Ca_{0.9}Y_{0.1}Cu_2O_{8+\delta}$ system.—73-01493
Anomalous behavior of the flux line lattice of vibrating high-$T_c$ superconductors at 30 K in magnetic fields parallel to the $CuO_2$ planes.—73-15389
Anomalous voltage drop on the *V-I* characteristics of Bi(2223)/Ag-sheathed tapes.—73-15392
Anomalously large gap anisotropy in the *a-b* plane of $Bi_2Sr_2CaCu_2O_{8+\delta}$.—73-15393
Atomic layer control of the growth of oxide superconductors using laser molecular beam epitaxy.—73-04674
Atomic resolution scanning tunneling spectroscopic studies of $Bi_2Sr_2CaCu_2O_y$ single crystals.—73-05361
Behavior of ac susceptibility of YBCO and BSCCO superconductors in dc magnetic fields.—73-11693
Bi-Sr-Ca-Cu-(Al)-O system; accompanying phases: I.—73-11695
Bi-Sr-Ca-Cu-O superconducting films by plasma sputtering of nanocrystalline compound targets.—73-04676
Bismuth-containing superconducting material and process for producing it.—73-04831
Brownian motion of vortex-antivortex excitations in very thin films of $Bi_2Sr_2CaCu_2O_8$.—73-07994
Changes in diamagnetic susceptibility and critical current of $Bi_{1.6}Pb_{0.4}Sr_2Ca_2Cu_3O_x$ caused by mechanical stresses.—73-07995
Characteristics of the bulk made of the Ag-coated powders of Bi systems.—73-01500
Characterization of lead-free 2212 phase of Bi superconductor with $T_c$ of 93 K.—73-04679
Chemical and mechanical stability of the Ba-added high-$T_c$ phase in the Bi-Pb-Sr-Ca-Cu-O system.—73-01504
Chemical and mechanical stability of the high-$T_c$ phase in the Bi-Pb-Sr-Ca-Cu-O system: IV, Formation of the high-$T_c$ phase in amorphous powder prepared by mechanical grinding.—73-01505
Chemical reactivity of YBCO and Bi(Pb)SrCaCuO superconductors in water.—73-15399
Circular dichroism microspectroscopy: evidence of broken symmetries in high-$T_c$ superconducting films.—73-08000
Comparative study of the synthesis techniques to obtain high-$T_c$ single phase in bismuth-based superconductors.—73-01508
Contact resistance and *I-V* characteristics in an Ag-doped Bi-Sr-Ca-Cu-O superconductor.—73-01510
Coordination and the bond valence sums in modulated $Bi_2(Sr,Ca)_2Cu_2O_{8+y}$.—73-01512
Critical current density of high-quality $Bi_2Sr_2Ca_2Cu_3O_x$ thin films prepared by metallorganic chemical vapor deposition.—73-11711
Critical fluctuations in the thermodynamics of quasi-2-D type II superconductors.—73-08012
Critical state of the weakly coupled 2-D superconductor $Bi_2Sr_2CaCu_2O_8$.—73-11714
Crystallization and stability of the $Bi_2Sr_2CaCu_2O_x$ superconductor.—73-11718
Current and angular-dependent transport in the mixed state of $Bi_2Sr_2Ca-Cu_2O_{8+\delta}$.—73-15409
CVD method for forming Bi-containing oxide superconducting films.—73-11950
Delamination and oriented molding of the Bi(Pb)-Sr-Ca-Cu-O system for higher critical current density.—73-08016
Densification of $Bi_{1.8}(Pb)_{0.35}$ $Sr_{1.9}Ca_{2.1}Cu_3O_x$ and texture development through sinter-forging.—73-11722
Densification of Bi-Pb-Sr-Ca-Cu-O bulk superconductor by hot-press sintering and critical current density.—73-11723
Densification of Bi-Pb-Sr-Ca-Cu-O bulk superconductors by hot-press sintering and critical current density.—73-01516
Depinning of flux lines in $Bi_2Sr_2CaCu_2O_{8+y}$.—73-04694
Detection of optical radiation with bismuth-containing high-$T_c$ films.—73-01518
Determination of Cu(II) and Bi(III) in oxide systems based on Bi, Cu, Ca, and Sr by photometric titration by EDTA with pyrocatechol violet.—73-11724
Differential resistance and critical current distribution in Ag-clad (BiPb)$_2Sr_2Ca_2Cu_3O_{10+y}$ tape.—73-15418
Diffusion of sulfur, selenium, and bismuth in HTSC $YBa_2Cu_3O_{7-\delta}$ and ($Pb_xBi_{1-x}$)$_2Ca_2Sr_2Cu_3O_y$ ceramics.—73-03092
Dislocations in the Monte Carlo simulation of flux lattice melting in high-$T_c$ superconductors.—73-08022
Dissipation mechanisms at the resistivity transition of HTSC in a magnetic field.—73-08023
Dopants in high-$T_c$ superconductors from rapidly quenched $Bi_{1.6}Pb_{0.4}Ca_2Sr_2Cu_3O_x$ glasses.—73-08025
Early-stage microstructure development in Bi-Sr-Ca-Cu-O glasses.—73-01525
Effect of $^{58}$Ni ion irradiation on the resistivity of $Bi_{1.7}Pb_{0.35}Sr_2Ca_2Cu_3O_{10+x}$ at low ion fluence.—73-11728
Effect of $Ar_2$ annealing on properties of $Bi_2Sr_2CaCu_{1.2}Li_{0.8}O_x$.—73-11730
Effect of $Ca_2CuO_3$ on the formation of (2223) phase in the Bi-Pb-Sr-Ca-Cu-O system.—73-01526
Effect of $Ca_2PbO_4$ on the formation of the (2223) phase in the Bi-Pb-Sr-Ca-CuO system.—73-08028
Effect of Cu$^+$ content on properties of $Bi_2Sr_2CaCu_2O_x$ glass.—73-07015
Effect of $Cu^+/Cu^{2+}$ ratio on the thermal stability and crystallization in $Bi_2Sr_2CaCu_2O_x$ glass.—73-01527
Effect of fluorine doping on the electrical properties of $Bi_2Sr_2CaCu_2O_y$.—73-08031
Effect of $Ga_2O_3$ substitution on Bi-2212 superconductor.—73-01528
Effect of heat treatment conditions on $T_c$ and phase structure of 110-K superconductor in BiPbSrCaCuO system.—73-11732

Effect of high-energy ion irradiation and electron irradiation on textured $Bi_2Sr_2CaCu_2O_x$.—180-MeV $Cu^{11+}$ and $B^{11+}$ irradiations and 3-MeV electron irradiation.—73-08032

Effect of hydrogen on the electric resistivity of Bi-Sr-Ca-Cu-O superconductors at high temperature.—73-01530

Effect of impregnation of $ZrO_2$ on the chemical stability and the superconductivity of Y and Bi systems.—73-11733

Effect of irradiation with neutrons of low fluence on $T_c$ of $Bi_2Sr_2CaCu_2O_y$.—73-11734

Effect of Li addition to the low-$T_c$ phase in the Bi-Sr-Ca-Cu-O system: II.—73-01531

Effect of lithium oxide upon high-$T_c$ bismuth system superconductor (2223 phase).—73-08033

Effect of Sb additions on the formation of the high-$T_c$ phase in the Bi-Pb-Sr-Ca-Cu-O superconducting thick films.—73-08038

Effect of silver addition to the bismuth-lead-strontium-calcium-copper-oxygen superconductor: enhancement in critical current density.—73-08039

Effect of sintering time on the stabilization of the Bi-Pb-Sr-Ca-Cu-O superconducting phase.—73-04705

Effect of the cooling rate on superconductivity of Bi-system superconductor.—73-15435

Effect of thermal cycling on two-step enhanced superconducting transition in $Bi_{1.6}Pb_{0.4}Sr_2Ca_1Cu_2O_{8+x}$.—73-15436

Effect of water or organic solvent on $J_c$ or repress-formed superconductors in Bi(Pb) system.—73-15440

Effect of Y on the Ca and Sr planes in Y-doped $Bi_2Sr_2CaCu_2O_8$.—73-15441

Effects of carbon impurities in high-$T_c$ superconducting tapes using Auger electron spectroscopy.—73-04707

Effects of electron irradiation on the local structural change in oriented $Bi_2Sr_2CaCu_2O_x$ superconductors.—73-15443

Effects of oxygen on the melting and freezing of $Bi_2Sr_2Ca_1Cu_2O_{8+\delta}$.—73-11739

Effects of oxygen pressure and substrate temperature on the in situ grown BiSrCaCuO films by laser ablation.—73-11740

Effects of reducing and oxidizing thermal treatments on the transport critical current density in epitaxial $Bi_2Sr_{3-x}Ca_xCu_2O_{8+y}$ films.—73-01537

Effects of rolling process on the microstructural and superconducting properties of [Ag-sheathed] Bi-Pb-Sr-Ca-Cu-O tape.—73-11742

Effects of silver and lead on the phase stability of $Bi_2Sr_2Ca_1Cu_2O_{8+x}$ [Bi-2212] and $Bi_2Sr_2Ca_2Cu_3O_{10+x}$ [Bi-2223] above and below the solidus temperature.—73-15445

Effects of substitution of tin for copper in Bi-based compound.—73-04711

Effects of target presputtering on stoichiometry of sputtered Bi-Sr-Ca-Cu-O thin films.—73-09110

Electron scattering by $Bi_2Sr_2CaCu_2O_x$ single crystals.—73-15451

Electron-phonon coupling mechanism in $Bi_2Sr_2CaCu_2O_x$ by tunneling.—73-08053

Electronic band structure of $Bi_2Sr_2Ca_{1-x}Y_xCu_2O_x$ ($x$=0.4–1) determined by ir-induced intersite transition.—73-15452

Electronic properties of high-$T_c$ superconductors below and above the Fermi energy.—73-01540

Electronic structure of Bi-Sr-(Ca)-Cu-O systems.—73-05392

Enhanced flux-line pinning in $Bi_2Sr_2CaCu_2O_x$ by neutron irradiation and Li($n$, $^3T$)$\alpha$ reaction-induced charged-particle defects.—73-01543

Entropy of mixed state of the superconducting ceramic $Bi_2Sr_2Ca_2Cu_3O_x$.—73-15460

Evidence for flux-lattice melting and a dimensional crossover in single-crystal $Bi_{2.15}Sr_{1.85}CaCu_2O_{8+\delta}$ from muon spin rotation studies.—73-11751

Evidence in the elastic properties for a stress-related phase transition in the high-$T_c$ material: $Bi_2Sr_2CaCu_2O_x$.—73-08068

Excess conductivity studies in pure and Ag-doped 85-K phase in Bi-Sr-Ca-Cu-O system.—73-04719

Extra-Drude absorption and $T_c$ in superconducting cuprates.—73-08071

Fabrication and properties of superconducting wire formed by extruding method.—73-04722

Fabrication and properties of superconducting wire formed by extruding method.—73-11756

Fabrication of Bi (2223)/Ag tapes.—73-11758

Fabrication of $Bi_{1.7}Pb_{0.4}Sr_{1.6}Ca_{2.4}Cu_{3.6}O_y$ superconducting films on silver substrates by the electrophoretic deposition technique.—73-15467

Fabrication of Bi(Pb)-Sr-Ca-Cu-O superconducting thin films by rapid thermal annealing.—73-11759

Feasibility of a high-temperature bolometer based on $Bi_2Sr_2CaCu_2O_{8+x}$ superconducting films.—73-08078

Features of synthesis of Bi(Pb)-Sr-Ca-Cu-O superconductors via precursors.—73-01550

Field-induced 3-D to 2-D crossover of shield current path in $Bi_2Sr_2CaCu_2O_8$.—73-15472

FIM [field ion microscopy] investigation of high-temperature superconducting $Bi_2(Sr, Ca)_3Cu_2O_y$.—73-01552

Fluctuation conductivity and magnetoconductivity in 2/2/1/2-phase $Bi_2Sr_2CaCu_2O_{8+\delta}$ epitaxial films.—73-15473

Flux penetration in Bi(Pb)-Sr-Ca-Cu-O superconductor.—73-15476

Flux pinning characteristics in Bi-2212 single crystal.—73-15477

Flux-creep crossover and relaxation over surface barriers in $Bi_2Sr_2CaCu_2O_8$ crystals.—73-08871

Flux-line pinning of $Bi_2Sr_2Ca_1Cu_2O_x$ crystals: interplay of intrinsic 2-D behavior and irradiation-induced columnar defects.—73-08085

Formation and properties of copper film on Tl-(Pb, Bi)-Sr-Ca-Cu-O superconductor by electrodeposition from aqueous solution.—73-01555

Formation mechanism of superconducting crystals in Bi-Sr-Ca-Cu-O glasses.—73-15479

Formation of 2223 high-$T_c$ superconducting phase in the Bi-Sr-Ca-Cu-O system.—73-04728

Formation of 2223 phase in Bi-system superconductor containing Pb.—73-11767

Formation of Bi-Pb-Sr-Ca-Cu-O superconductor from precursors prepared by the citrate method.—73-15480

Formation of high-$T_c$ $Bi_{1.6}Pb_{0.4}Sr_2Ca_2(Cu_{0.9}Ti_{0.1})_3O_x$.—73-11770

Formation of solid solutions of $Bi_2Sr_{2-x}Ba_xCa_{1-y}Nd_yCu_2O_{8+\delta}$.—73-15481

Formation of the high-$T_c$ 2223 phase in Bi-Sr-Ca-Cu-O by seeding.—73-15677

Formation of the high-$T_c$ phase in Bi-2223 system in various atmospheres—effect of $O_2$ partial pressure.—73-15482

Formation of the high-$T_c$ phase in the Bi-Pb-Sr-Ca-Cu-O in samples enclosed in silver pipe.—73-01557

Formation of the high-$T_c$ phase in the Bi-Pb-Sr-Ca-Cu-O system in various atmospheres.—73-01558

Gapless superconductivity in $Bi_2Sr_2CaCu_2O_8$.—73-15489

Phase transition toughening of high-$T_c$ superconducting ceramics.—73-15579
Phases and their relation in $BiO_{1.5}$-SrO($SrCO_3$)-CuO system at 720°C.—73-16270
Phenomenology of the ir properties of the CuO superconductors.—73-08163
Phonons and superconductivity in $Bi_2Sr_2CaCu_2O_8$.—73-08164
Photoresponse of granular (Pb)BiSrCaCuO films to millimeter-wavelength radiation.—73-11862
Preferential crystallographic site substitution and oxygen migration in $Bi_2(Sr, Ca, La)_3Cu_2O_8$, $Bi_2(Sr, Ca, Yb)_3Cu_2O_8$ related to rare-earth ion size.—73-03109
Preparation and characterization of interface morphologies of silver-sheathed superconducting Bi-Sr-Ca-Cu-O ribbons.—73-08172
Preparation and transport properties of superconducting BPSCCO thin films.—73-15590
Preparation of (Bi, Pb)-Sr-Ca-Cu-O superconducting thin films by the mist microwave-plasma chemical vapor deposition method.—73-11869
Preparation of Ag-I intercalated $Bi_2Sr_2CaCu_2O_y$ superconductor.—73-15593
Preparation of an Ag-doped Bi-Sr-Ca-Cu-O bulk sample by the floating zone method.—73-01637
Preparation of $Bi_2Sr_2CaCu_2O_x$ films on alumina substrates with a $CuAl_2O_x$ buffer layer.—73-08176
Preparation of Bi-Pb-Sr-Ca-Cu-O superconductor by the citrate method.—73-15594
Preparation of Bi-Pb-Sr-Ca-Cu-O superconductor using $Bi(Sr_{0.5}Ca_{0.5})O_x$ as a starting material.—73-15595
Preparation of Bi-Sr-Ca-Cu-O high-$T_c$ superconducting ceramics with fine monophase.—73-11871
Presintering processing of a Bi-based bulk superconductor by slurry pressing.—73-11874
Process for preparing a superconducting thin oxide film.—73-01731
Process for preparing a thin film of Bi-type oxide superconductor.—73-01732
Process for preparing superconductor of compound oxide of Bi-Sr-Ca-Cu system.—73-11993
Process for producing a high-temperature superconductor containing bismuth, strontium, calcium, and copper.—73-01733
Process for producing Bi-Pb-Sr-Ca-Cu-O superconducting films.—73-11995
Process for producing molded bodies from precursors of high-temperature superconductors.—73-15693
Processing and characterization of high-temperature superconductor films formed by spin-on coating and rapid thermal annealing.—73-11876
Processing and transport properties of high-$J_c$ silver-clad Bi-2223 tapes and coils.—73-11877
Processing of thin films of the three-layer superconducting phase in the Pb-doped Bi-Sr-Ca-Cu-O system by metallorganic deposition.—73-04795
Processing-microstructure-property relationships of $Al_2O_3$-fiber-reinforced high-temperature superconducting $(Bi,Pb)_2Sr_2Ca_2Cu_3O_x$ composite.—73-15601
Pure and lithium-doped $Bi_2Sr_2CaCu_2O_x$ silver-clad tapes.—73-11883
Putting a chill into the new HTS application.—73-15605
Quasi-2-D nature of the phonon subsystem of Bi superconductors.—73-08182
Quasi-particle damping in $Bi_2Sr_2CaCu_2O_8$ and $Bi_2Sr_2CuO_6$.—73-08183
Raman spectra of iodide species in intercalated $[Bi_2Sr_2CaCu_2O_{8+\delta}$.—73-11885
RBS study of in situ grown BiSrCaCuO films.—73-08184
Reaction process of Bi-Sr-Ca-Cu-O system and the formation mechanism of 2212 superconducting phase.—73-04798
Reactions between $Bi_2Sr_2CaCu_2O_x$ superconducting oxide and metallic copper and their prevention.—73-04799
Reactions between $Bi_2Sr_2CaCu_2O_x$ superconducting oxide and metallic copper and their preventions.—73-11887
Remanent magnetization of $Bi_2Sr_2CaCu_2O_8$ single crystals [studied] by means of a Hall probe.—73-08188
Resistive transition of Bi(2223) silver-clamped thick film.—73-11892
Resonance structure in *I-V* characteristics of break junctions based on Bi-Sr-Ca-Cu-O:Pb.—73-08190
Resonance-type internal friction of 1:1:1:2 Bi-Sr-Ca-Cu-O superconductor at very low frequencies.—73-01650
Role of 2-D electron-hole lattice system in modulated structure of high-$T_c$ superconductor $Bi_{2-x}Pb_xSr_2CaCu_2O_{8+\delta}$.—73-15614
Scaling of the flux pinning force in epitaxial $Bi_2Sr_2Ca_2Cu_3O_x$ thin films.—73-15615
Scanning electron acoustic microscopy [SEAM] of $Bi_2Sr_2CaCu_2O_8$.—73-15616
Self-energy effects of the $B_{1g}$ phonon in $Bi_2Sr_2CaCu_2O_8$.—73-15617
Self-heating vs quantum creep in bulk superconductors.—73-15618
Sensibility of the Bi-Pb-Sr-Ca-Cu-O superconductive films in weak magnetic field.—73-01657
Shear modulus and Poisson's ratio of $Bi_{1.6}Pb_{0.4}Sr_2Ca_{2.5}Cu_{3.5}O_x$.—73-15619
Simplified method of synthesis for Bi-Pb-Sr-Ca-Cu-O superconductors via solid-state reaction.—73-04805
Simplified method of synthesis for Bi-Pb-Sr-Ca-Cu-O superconductors via solid-state reaction.—73-15620
Single-crystal EPR and thermal expansion studies of the high-$T_c$ superconductor $Bi_2Sr_2CaCu_2O_{8+\delta}$.—73-01658
Single-electron charging effect in BiSrCaCuO granular thin films.—73-11898
Single-particle tunneling in BiPbSrCaCuO (2:2:1:2 and 2:2:2:3 phases).—73-08197
Single-particle tunneling studies on $Bi_2Sr_2Ca_1Cu_2O_y$.—73-01659
Solid-phase epitaxy of $Bi_2Sr_2CaCu_2O_x$ superconducting thin films.—73-01660
SQUID picovoltametry of single-crystal $Bi_2Sr_2CaCu_2O_{8+\delta}$: an observation of the crossover from high-temperature Arrhenius to low-temperature vortex glass behavior.—73-08203
$Sr_{1-x}Ca_xCuO_2$ [SCCO] solid solution in Bi(Pb)-Sr-Ca-Cu-O superconductors.—73-08204
Stability of high-$T_c$ phase in $Bi_{1.6}Pb_{0.4}Sr_2Ca_2Cu_3O_x$ compounds prepared by hot isostatic pressing.—73-01662
Stability range and $T_c$ variation of superconducting $Bi_{1.92}Sr_{1.89}Ca_{0.04}Cu_2O_y$.—73-08206
STM study of the electronic density of states in the superconducting phase of $Bi_2Sr_2CaCu_2O_8$.—73-08207
Structural and electrical properties of glassy analogs to bismuth-cuprate-based superconductors.—73-01321
Structural and electrical resistivity studies on $Bi_{1.6}Pb_{0.4}Sr_2Ca_xCu_3O_y$ composition synthesized by different routes.—73-08208
Structural and magnetic properties of $Bi_2Sr_2Ca$-$Cu_{2(1-x)}Fe_2O_{8+\delta}$.—73-04656
Structural study on fluorine-doped Bi(Pb)-Sr-Ca-Cu-O superconductor.—73-01669
Structural study on fluorine-doped Bi(Pb)-Sr-Ca-Cu-O superconductors.—73-11906
Structure and crystallization behavior of amorphous $Bi_{0.96}Pb_{0.24}SrCaCu_{1.6}O_{5+y}$ high-temperature superconductor material.—73-08212
Structures and properties of F-doped Bi-system superconductors.—73-11910
Superconducting and structural properties of homogeneous BiSrCaCuO (2212) single crystals prepared by solution growth.—73-08215
Superconducting $Bi_2Sr_2Ca_1Cu_2O_x$ ceramics prepared via melt quenching.—73-15633
Superconducting Bi(Pb)-Sr-Ca-Cu-O fibers drawn from melt-quenched glasses.—73-04811
Superconducting ceramics: preparation, XRD, SEM, and EPR measurements to study the influence of compositional variations on superconductivity of La-(Ba/Sr/Ca)-CuO ceramic systems.—73-08216
Superconducting energy gap in $Bi_2Sr_2CaCu_2O_8$ observed by high-resolution photoemission spectroscopy.—73-15634
Superconducting fluctuation study above $T_c$ of Bi(Pb)-Sr-Ca-Cu-O thin films made by sputtering.—73-08218
Superconducting fluctuations in the thermoelectric power and resistivity of Bi-based polycrystalline cuprates.—73-01674
Superconducting glass-ceramics in the Bi-Sr-Ca-Cu-O system[—review].—73-08219
Superconducting order parameter on $Bi_2Sr_2CaCu_2O_8$ single crystals.—73-11916
Superconducting properties of Ba-doped (Bi,Pb) 2223 tapes.—73-01675
Superconductivity of the Ba-doped $Bi_2Pb_2Sr_2Ca_2Cu_3O_y$ system.—73-04816
Superconductor crystal and process for preparing the same.—73-01742
Superconductors are still hot.—73-11919
Surface phase decomposition in $Bi_2Sr_2CaCu_2O_x$ single crystals.—73-08234
Symmetry of the superconducting order parameter in $Bi_2Sr_2CaCu_2O_x$.—73-11921
Synthesis and $^{17}O$ NMR characterization of the high-$T_c$ phase in the Bi-Pb-Sr-Ca-Cu-O superconductor.—73-11922
Synthesis and characterization of $Bi_2Sr_2Ca_{n-1}Cu_nO_y$ ($n$=1–7) thin films grown by off-axis, three-target magnetron sputtering.—73-11923
Synthesis of BiPbSrCaCuO superconductor.—73-12006
Synthesis of bismuth-based superconductors using poly(acrylic acid).—73-08237
Team sport of technology transfer: spectators welcome.—73-15649
Techniques for texturing ceramic superconductors from an amorphous precursor.—73-11931
Temperature dependence of electric quadrupole interaction in high-$T_c$ superconductor $Bi_{1.7}Pb_{0.7}Sr_2CaCu_2O_{8+\delta}$.—73-08245
Temperature dependence of the energy gap in $Bi_2Sr_2CaCu_2O_8$ superconductors by high-resolution EELS.—73-08247
Temperature-dependent point-contact characteristics of some granular high-$T_c$ superconductors.—73-08249
Textured Bi-Sr-Ca-Cu-O bulk sample.—73-15651
Textured growth and orientation dependence of hardness measurement on superconducting $Bi_2Sr_2CaCu_2O_y$.—73-04820
Theory of superconductivity of $Bi_2Sr_2Ca_2Cu_3O_{10}$.—73-11933
Thermal conductivity of $TmBa_2Cu_3O_x$ and $Bi_2Sr_2CaCu_2O_x$ single crystals in the vicinity of $T_c$.—73-08253
Thermally activated flux creep in a bismuth-based bulk material.—73-11934
Thermodynamic study of high-temperature superconductors $YBa_2Cu_3O_x$ and $Bi_2Sr_2CaCu_2O_y$.—73-01691
Thermoelectric power and percolation in BSCCO system.—73-08994
Thermoelectric power of bulk and thin-film Bi high-$T_c$ superconductors.—73-11935
Thermopower and fluctuation effects in bismuth cuprate high-$T_c$ crystals.—73-08256
Thin-film BiPbSrCaCuO dc SQUID's operating at liquid nitrogen temperature.—73-11936
Transport critical current properties of $Bi_2Sr_2CaCu_2O_x$/Ag tapes.—73-04822
Tunneling investigations of Bi-Pb-Sr-Ca-C-O films with $T_c$=100 K.—73-08266
Tunneling measurements of BSCCO single crystals.—73-08267
Twin-roller quenching of $Bi_2Sr_2Ca_2Cu_3O_{10}$ melts.—73-07185
Universal behavior of the Hall resistivity of single-crystalline $Bi_2Sr_2CaCu_2O_x$ in a thermally activated flux flow regime.—73-15661
Vortex configuration and dynamics in $Bi_2Sr_{1.8}CaCu_2O_x$ thin films by Lorentz microscopy.—73-11940
Vortex fluctuations in the cuprate superconductor $Bi_2Sr_2CaCu_2O_8$.—73-15665
Weak links and critical current density in $Bi_2Sr_2CaCu_2O_x$ thin films.—73-01703
XAS study of hole density and symmetry in a $Bi_2Sr_2CaCu_2O_{8+\delta}$ single crystal.—73-05526
Zero resistance of quenched $Bi_{1.5}Pb_{0.4}Sb_{0.1}Sr_2Ca_2Cu_3O_x$ at 140 K.—73-04828

**bismuth titanates,**
Double-phase conjugation in $Bi_{12}TiO_{20}$ photorefractive fiberlike crystal.—73-12770
Electrical characteristics of excimer laser-ablated bismuth titanate films on silicon.—73-12786
Extended defects in ZnO ceramics containing $Bi_4Ti_3O_{12}$ additive.—73-09404
Ferroelectric bismuth titanate films by hot wall metallorganic chemical vapor deposition.—73-04552
Growth and optical properties of doped bismuth titanate.—73-02613
Nonstoichiometry and the long-range cation ordering in crystals of $(Na_{1/2}Bi_{1/2})TiO_3$.—73-16232
Optical transmission spectra of doped $Bi_{12}TiO_{20}$ photorefractive crystals with antireflection coatings.—73-16560
Preparation and properties of $Bi_4Ti_3O_{12}$ single-crystal thin films by atmospheric pressure metallorganic chemical vapor deposition.—73-04567
Preparation of $Bi_4Ti_3O_{12}$ thin films with *c*-axis orientation by MOCVD using $Bi(o\text{-}C_7H_7)_3$ and $Ti(i\text{-}OC_3H_7)_2(DPM)_2$.—73-16918
Preparation of epitaxial $Bi_4Ti_3O_{12}$ films on sapphire substrates by chemical vapor deposition.—73-09261
Process-property correlations of excimer laser-ablated bismuth titanate films on silicon.—73-11605
Pulsed laser deposition (PLD) of oriented bismuth titanate films for integrated electronic applications.—73-11608
Recording of higher spatial harmonics of a photorefractive grating through the phase-locked detection mechanism.—73-08963
Simultaneous recording of absorption and photorefractive gratings in photorefractive crystals.—73-08967
Structural and electrical studies on rapid thermally processed ferroelectric $Bi_4Ti_3O_{12}$ thin films by metallorganic solution deposition.—73-11621

**bismuth,**
1-D "dislocation"-related electronic states in GaAs(110)×Bi(1×1) interface.—73-07701
$A_x^{III}B_{2-x}^{V}C_3^{VI}$ crystals of tetradymite structure.—73-03074
Activation energy and pinning potential in Bi-based tapes.—73-11682
Anharmonic phonon structure in the tunneling conductance of Bi cuprates.—73-15385
Anomalous temperature dependence of $H_{c2}$ in Bi-Sr-Cu-O.—73-15391
Anomalous thermoelectric power of $Bi_{1.6}Pb_{0.5}Sr_{1.9-y}La_yCu_{1.05}O_x$.—73-02553
Bi thin-film growth structures prepared at 30 K on GaAs(110) and InP(110).—73-07390
Bi-implanted $SiO_2$: a potential optical device material.—73-14135
Bismuth-containing lead-free glass enamels and glazes of low silica content.—73-03672
Content of oxygen and bismuth(V) in the double oxides of barium and bismuth.—73-01511
Crystal structure of $Bi_2Sr_2CuO_6$: a structure based on periodic crystallographic shear planes in the "2201" structure.—73-08587
Description of experimental *I-V* characteristics of $Bi_{12}SiO_{20}$ crystals using analytical approximations of theory of space-charge-limited currents.—73-16439
Determination of the basic composition of microsamples of $Bi_{12}GeO_{20}$ crystals.—73-02235
Determination of the geometrical configuration of Bi on GaAs(110) by X-ray standing wave triangulation.—73-07441
Diffusion and clustering in the $Cd_{1-x}Bi_xF_{2+x}$ solid solution: a fluorine NMR study.—73-03090
Domain wall of ferroelastic $BiVO_4$ studied by TEM.—73-03133
Effect of electric field stimulation on the optical and photoelectric properties of $Bi_{12}SiO_{20}$.—73-02579
Effect of intercalation by metal atoms on energy spectrum of $Bi_2Te_3$.—73-01134
Effect of optical bias on grating formation dynamics in photorefractive BSO.—73-02586
Elastic constants of bismuth-containing gallate glasses.—73-07022
Electrical and optical studies in some Bi-doped amorphous chalcogenide thin films.—73-07482
Electrical properties and photoluminescence of epitaxial

GaSb:Bi and GaSb:Bi:Sn films formed from Bi solutions.—73-01145
Electrical properties of $Bi_2Se_3$ thin films prepared by reactive evaporation.—73-08856
Electrooptic and photoelectric effects of $Bi_{12}SiO_{20}$ (BSO) crystals.—73-11190
EPR and AFMR of $Bi_2CuO_4$ in submillimeter wave region.—73-08864
EPR characterization of Co impurities doping $Bi_4Ge_3O_{12}$ single crystals.—73-05394
Evidence for oxygen nonstoichiometry in a stabilized Bi-Ca-Pb-O fluorite-type phase.—73-08621
Features of photoluminescence of glasses of the system $(GeS_2)_{100-x}Bi_x$ and $(As_2S_3)_{100-x}Bi_x$.—73-14186
Growth mode of Bi and Sb layers on GaAs(110) and InP(110).—73-01179
Heat capacity measurements on $Ge_{20}Se_{80-x}Bi_x$ glasses.—73-14200
Hopping conduction in $NaBi(MoO_4)_2$ crystals.—73-02617
Identification of $Cr^{3+}$ impurities in heavily Cr-doped $Bi_4Ge_3O_{12}$ single crystals.—73-05417
Impedance spectroscopy study of sintering in Bi-doped ZnO.—73-12600
Improvement of FMR linewidth in Bi-substituted lutetium iron garnet thin films for the MSW-optical-mode interaction.—73-04615
Influence of preparation procedure on some physical properties of BICUVOX $[Bi_2V_{0.9}Cu_{0.1}O_{5.35}]$.—73-13099
Ionic skin-effect in copper-doped $Bi_2Te_3$ single crystals.—73-16525
Isothermal capacitance transient spectroscopy of grain-boundary interfacial states in Bi-doped $SrTiO_3$ ceramics.—73-07331
Magnetic neutron scattering in single-crystal $Bi_2CuO_4$.—73-05432
Mechanism of photorefractive enhancement of photochromic gratings in $Bi_{12}SiO_{20}$—experimental results and phenomenological modeling.—73-05595
Microstrains and domain sizes in Bi-Cu-O superconductors: an X-ray diffraction peak-broadening study.—73-01605
Modulation structures and new type of twin boundary in Bi-Sr-Cu-O system doped with Ba.—73-11840
Multiple forward phase conjugation in a photorefractive bismuth silicate crystal.—73-08921
Nonlinear absorption of laser light in $Bi_2TeO_5$ single crystals.—73-16549
Numerical analysis of photorefractive grating formation dynamics at large modulations in BSO ($Bi_{12}SiO_{20}$).—73-08930
Onset of crystal growth of bismuth on graphite: an atomic force microscopy study.—73-09497
Optical constants of bismuth gallate glasses.—73-07058
Optical, magnetooptical, and EPR study of chromium impurities in $Bi_4Ge_3O_{12}$ single crystals.—73-16241
Optically induced gratings in Fe- and Mn-doped $Bi_4Ge_3O_{12}$ single crystals.—73-02658
Phase transitions and dielectric properties in some compounds with bismuth oxide layer structure.—73-04563
Phonon and electronic properties of $TlBiSe_2$ thin films.—73-08948
Photocatalytic deposition of Bi(III) ions onto $TiO_2$ powder.—73-12855
Photoconductivity of bismuth tellurite.—73-15278
Photoelastic constants of bismuth-containing gallate glasses.—73-07063
Photoluminescence in $Ge_{25}Se_{75-x}Bi_x$ sputtered films.—73-08951
Plastic deformation of bismuth-containing glass-ceramics.—73-14254
Polycrystalline $Bi_2S_3$ thin films prepared by reactive evaporation.—73-04446
Positron annihilation study of $SrTiO_3$-based ceramics.—73-03108
Preparation and electrical properties of bismuth strontium dimanganese hexoxide $[BiSrMn_2O_6]$.—73-15110
Preparation of pyrochlore-type $Na_{0.39}Bi_{1.47}O_7$ containing $Bi^{5+}$ by low-temperature hydrothermal reaction.—73-08712
Process for producing Bi-Ca-Sr-Cu-O, Tl-Ca-Sr-Cu-O, and Tl-Ba-Ca-Cu-O superconducting ceramics.—73-01736
Process for producing bismuth-based oxide superconducting films.—73-11996
Refraction and molar volume of bismuth-containing gallate glasses.—73-07069
Role of electron injection in formation electret state in $Bi_{12}SiO_{20}$ crystals.—73-16590
Spectral orgins of giant Faraday rotation and ellipticity in Bi-substituted magnetic garnets.—73-04653
Spin waves in single-crystal $Bi_2CuO_4$ [investigated] by inelastic neutron scattering.—73-08737
Spin-glass behavior in amorphous $BiFeO_3$.—73-11674
Spin-glass state in amorphous $Bi_2CuO_4$.—73-16311
Strain and the two-dimensional electronic structure of monolayers of Bi/InAs(110) and Bi/GaAs(110).—73-07813
Structural relaxation of bismuth germanate glasses.—73-03762
Subharmonics in photorefractive $Bi_{12}TiO_{20}$ crystals.—73-02695
Surface atomic structure and bonding of GaAs(110)-$p(1\times1)$-Bi (1 ML).—73-07822
Surface stability of bismuth-ruthenium oxide electrodes.—73-07363
System $Bi_2O_3$-SrO-CuO—73-11929
System $Bi_2Se_3$-InSe.—73-12714
Temperature sensitvity of the optical constants of $BiVO_4$.—73-02703
Tentative phase diagram of the system $PbF_2$-$BiF_3$.—73-02516
Theoretical analysis of mechanism of photorefractive enhancement of photochromic gratings in bismuth silicon oxide.—73-05650
Thermal anomalies in $Bi_2WO_6$ and EPR of doped $Gd^{3+}$ ions.—73-08984
Transient response of a photorefractive grating produced in a $Bi_{12}SiO_{20}$ (BSO) crystal by a short light pulse.—73-05682
Transport properties of $Ba_{1-x}K_xBiO_3$ single crystals.—73-09425
Tunneling into BiSrCuO superconductor up to the critical magnetic field.—73-08265
Vanadium(V) environments in bismuth vanadates: a structural investigation using Raman spectroscopy and solid-state $^{51}V$ NMR.—73-02536

**bismuthates,**
CDW suppression and photoinduced gap states in $BaBiO_3$.—73-02156
Effect of [irradiation] by subthreshold energy electrons on microwave absorption and luminescence of copper-free $Ba_{1-x}K_xBiO_3$ superconductors.—73-15424
Effect of oxygen deficiency on the structure and conduction behavior of $BaPb_{0.75}Bi_{0.25}O_{3-\delta}$.—73-16120
Effects of oxidation and air exposure on $Rb_xBa_{1-x}BiO_3$ superconducting thin films.—73-01535
Effects of oxygen partial pressure and substrate temperature on the in situ growth of the $Ba_{1-x}Rb_xBiO_3$ films by laser ablation.—73-08046
Electrical responses of Ln-Ba-Cu-O (Ln=Eu, Y), Ba-K-Bi-O, and Ba-Pb-Bi-O superconducting thin films to pulsed infrared radiation.—73-15449
Fabrication of $Ba_{1-x}K_xBiO_3$ superconductors prepared by the plasma-arc melting and rapid quenching method.—73-11757
Infrared spectral investigation of bismuthate glasses.—73-14011
Magnetic penetration depth in KBaBiO from measurements of the dynamic susceptibility of powder in an alternating magnetic field.—73-05593
Metal-insulator transition in doped bismuthate superconductors.—73-08132
Multicritical phase diagram and random field effects in superconducting bismuthates.—73-15560
Properties of $BaPb_{1-x}Bi_xO_3$ as observed in single-crystal thin films.—73-16576
Property control for high-quality $Ba_{1-x}K_xBiO_3$ [BKBO] epitaxial thin films prepared by high-pressure reactive rf magnetron sputtering.—73-15604
Rotational vortex-flux properties of $Ba_{0.575}K_{0.425}BiO_3$.—73-04802
Specific heat of copperless oxide $Ba_{0.6}K_{0.4}BiO_3$ superconductor.—73-15624
Structure and chemistry of $Ba_{0.6}K_{0.4}BiO_y$ at high temperatures.—73-02458
Superconductors with quasi-localized pairs: bismuthates and $A^{IV}B^{VI}$ semiconductors doped by $III^B$ metals.—73-01681
Synthesis of superconducting epitaxial films of $Ba_{1-x}K_xBiO_3$ [x=0.4] by laser ablation.—73-11927
Tunneling studies of $BaPb_{0.75}Bi_{0.25}O_3$.—73-12903
Ultraviolet photoluminescence [UVPL] of high-$T_c$ superconductors.—73-01701
YBCO-BiO composite superconductor for granular-type Josephson microwave detector.—73-15674

**bisque,**
Glazing an inertized bisque.—73-14658

**bistability,**
RT optical bistability in hydrogenated a-$SiC_x$:H alloys.—73-16591

**blast-furnace slag,**
$^{29}Si$ and $^{27}Al$ MAS-NMR of NaOH-activated blast-furnace slag.—73-16301
Activation of blast-furnace slag in cement without clinker.—73-06621
Activation of ground blast-furnace slag by alkali-metal and alkaline-earth hydroxides—comment.—73-08545
Activation of ground blast-furnace slag by alkali-metal and alkaline-earth hydroxides—reply.—73-08546
Alkali-activated ground-granulated blast-furnace slag concrete: preliminary investigation.—73-00018
Assessment of the chemical and mineralogical composition of air-cooled blast-furnace slag for its use as concrete aggregate.—73-08491
Blast-furnace slag processing for blended cements.—73-09831
Consistency of high-strength concrete with high fineness granulated blast-furnace slag.—73-09867
Controlled crystallization of some rectified slag-based glasses.—73-14345
Durability of 34–31 year aged RC structures using Class-B portland blast-furnace slag cement.—73-09894
Effect of various factors on the compressive strength and frost resistance of mortar using blast-furnace slag.—73-09925
Effect on compressive strength of the glass content of blast-furnace slag when used as a cementitious constituent.—73-09928
Effects of the ground granulated blast-furnace slag and fly ash on the low-heat-generating concrete.—73-09939
Evaluation of granulated blast-furnace slag as a cementitious admixture—a case study.—73-06652
Heat of hydration and strength development of alite–belite–blast-furnace slag composite.—73-09980
Heat of hydration and strength development of alite–belite–blast-furnace slag composite.—73-09981
Ion-exchange reaction of granulated blast-furnace slag in acid solution.—73-08648
Microstructure and mechanical properties of hardened cement paste incorporating ground granulated blast-furnace slag.—73-10050
Microstructure and microanalysis of hardened cement pastes involving ground granulated blast-furnace slag.—73-00143
Modern plant configurations for grinding granulated blast-furnace slag.—73-12047
Neutralization of portland blast-furnace slag cement concrete subjected to atmospheric exposure for 30 years and effects of finishing materials.—73-10061
Process and properties of ceramic tile prepared from blast-furnace slag [BFS] raw materials.—73-04046
Process and properties of ceramic tile prepared from blast-furnace slag raw materials.—73-14665
Production of nonfired and nonsteam-cured brick with blast-furnace slags.—73-06701
Production parameters for ceramics based on waste at the Zaporozhe refractories factory.—73-01821
Properties of concrete incorporating low quantity of cement and high volumes of ground granulated slag.—73-00173
Properties of very fine blast-furnace slags manufactured by jet mill.—73-06707
Resistance of blast-furnace refractories to the action of aggressive reactants under conditions of oxidizing gaseous atmosphere.—73-14621
Strength development of high-strength mortar using ground granulated blast-furnace slag of different finenesses.—73-10166
Utilization of granulated blast-furnace slag.—73-00204

**blending,**
Advances in portland and blended cements.—73-09807
Alternative blending systems in the cement industry.—73-00023
Blended cement according to ENV 197 and experiences in Germany.—73-09832
Blended cements.—73-09833
Effect of admixture on hydration of cement, adsorptive behavior of admixture, and fluidity and setting of fresh cement paste.—73-09897
Portland and blended cement.—73-10086

**boehmite,**
Characterization of nitrided high surface gamma-alumina powders.—73-13376
Drying of boehmite gel fibers.—73-03833
Ir study of some surface properties of boehmite ($\gamma$-$AlO_2H$).—73-08652
Low-temperature sintering of $\alpha$-alumina-seeded boehmite gels.—73-16854

**bonds/bonding,**
Application of tellurite bonding glasses to magnetic heads.—73-03775
Articles including a ceramic member and a metal member bonded together.—73-03671
Bond length–Raman frequency correlations in borate crystals.—73-02152
Bonding and valence states in $YBa_2Cu_3O_{7-\delta}$ through secondary ion mass spectrometry.—73-01496
Bonding diamond to metal in electronic circuits.—73-13801
Bonding glass for assembling a magnetic head, and a magnetic head.—73-03906
Bonding strength of alumina joint bonded under the alternating stress.—73-13802
Bonding, structure, and properties of metal/ceramic interfaces.—73-00211
Ceramic bonding method.—73-00279
Ceramic bracket with coated base.—73-05197
Change in S–O bonding states of calcium sulfite hemihydrate during thermal reactions in air.—73-09844
Clusters in the model of glass based on soft three-center bonds in a rigid covalent network.—73-13943
Consideration of bond between RCC [roller-compacted concrete] and cement-treated basecourse.—73-09865
Constitution and electronic structure of Si–H and N–H bonds in amorphous $SiN_x$:H.—73-16067
Dangling bonds in amorphous silicon nitride alloys: predictions of the free energy model [FEM].—73-06147
Dangling bonds in nanometer-sized granulet silicon nitride [studied] by electron spin resonance.—73-12570
Determination of $sp^2/sp^3$ carbon bonding ratio in a-C:H including irradiation damage by factor analysis of Auger electron spectra.—73-16106
Determination of niobium–oxygen bond distances and bond orders by Raman spectroscopy.—73-02233
Development of chemically bonded ceramics in the CaO-$SiO_2$-$P_2O_5$-$H_2O$ system.—73-00060
Diffusion bonding behavior of austenitic stainless steel containing titanium and alumina.—73-03575
Diffusion bonding of a nickel (chromium) alloy to zirconia: mechanical properties and interface microstructures.—73-06770
Diffusion bonding of Inconel 600 to alumina without and with intermediate graded layers.—73-03576
Direct bonding of zirconia system without any fillers—basic research for self-healing.—73-05167
Effect of oxygen partial pressure on tungsten–alumina bonding behavior.—73-03579
Enamel–metal bonding strength with different firing cycles.—73-00227
Energy approach to bond strength determinations in cement systems.—73-09945
Formation of bonds in tricalcium silicate pastes as observed by scanning electron microscopy.—73-03470
Formation of Si–C bonds at the surface of silica and glass fibers.—73-03844
Fundamentals of bonding ceramic materials to metals.—73-13840
Identification of N dangling bonds in SiN films using X-ray absorption studies.—73-03095
Indirect-bonded metallization of aluminum nitride.—73-00979
Linear relation between transition temperature and H-bond distance in $M_3S(SeO_4)_2$ type crystals (M=K, Rb, Cs) with O–D H-bond network.—73-16196
Mechanical properties of the ceramic-metal bonding of a gold-platinum dental alloy and chemical characterization of the interface.—73-13869

Method for surface bonding of ceramic bodies.—73-01867
Microanalytical investigation of bonded ceramic materials.—73-03162
New-to-old concrete bonding: influence of sulfate type of new concrete on interface microstructure.—73-03505
Nondestructive TAB bond testing for multichip modules.—73-05075
Preparation and properties of bonding glass for amorphous magnetic head.—73-00533
Preparation and properties of bonding glass for amorphous magnetic head.—73-10473
Preparations and characteristics of chemically bonded ceramics.—73-05988
Properties of alumina/Al/alumina joints produced in air atmosphere.—73-03983
Reduction of residual stress on bonding interface for dissimilar materials.—73-03638
Silicate bonding of laterites: an ancient process for construction components.—73-00014
Silver paste sintering method for bonding ceramic surfaces.—73-10349
Silver-alumina solid-state bonding: influence of the work hardening of the metal.—73-03640
Solid-state bonding of $Si_3N_4$ ceramics with Fe-Cr alloy interlayers.—73-03642
Strong polarity and bond characterization of nanostructured silicon nitride solids.—73-05645
Structure and bonding of highly stressed vitrified bonded cutting tools.—73-13657
Superplastic diffusion bonding in ceramics.—73-06072
Superplastic diffusion bonding in ceramics.—73-13289
Surface bonding of ceramic bodies.—73-00297
Transient liquid phase ceramic bonding.—73-00302
Wafer bonding for hybrid circuit technology using solid-state reactions.—73-01363

**bone china,**
Analysis and study of some bone china.—73-10791
Bone china, a high-quality soft porcelain.—73-10802
Firing techniques to improve the quality of bone china.—73-10847
Glazing of bone china.—73-14659
Isostatic pressing of bone china.—73-10861

**borates,**
$^{155}Gd$ Mossbauer spectra of $Gd^{3+}$ in borate glasses.—73-13991
Acoustic emission [and sound velocity and absorption] in ionic conductor $Li_2B_4O_7$.—73-14676
Acoustic mechanism of sound absorption in $Li_2B_4O_7$.—73-01390
Alternative model for alkali-borate glass structure.—73-13924
Anomalous behavior of ultrasonic velocity in cesium borate glasses.—73-10418
Anomalous expansion of sodium triborate melt and its effect on glass properties.—73-06996
Bandwidth and beam quality of barium borate parametric oscillator synchronously pumped by an active-passive mode-locked Nd:YAG laser.—73-08812
Beneficiation of calcium borate minerals.—73-01847
Blue-violet tunable $LiB_3O_5$ single-pulse ps laser.—73-11556
Bond length–Raman frequency correlations in borate crystals.—73-02152
Borate glass containing boron carbide burnable poison coating.—73-02023
Borate glasses with the $nd^{10}$ $(n+1)$ $S^2$-shell activators.—73-14138
Chemical strengthening of some silicate- and borate-based glasses.—73-13941
Combined thermodynamic and neutron scattering investigation of glasses in the system $PbO-B_2O_3$.—73-13945
Comparative study of the efficiency of various borate compounds as set-retarders of Class G oilwell cement.—73-00044
Complex heat capacity of borate glasses.—73-14146
Compound $Li_3Ln_2(BO_3)_3$ in the systems $Li_2O-Ln_2O_3-B_2O_3$.—73-16063
Connection between the thermal capacity and the structure of alkali borate systems in the glassy, crystalline, and liquid states.—73-00442
Continuous-wave sum-frequency generation near 194 nm with a collinear double enhancement cavity.—73-08830
$Cr^{4+}/Cr^{3+}$ equilibrium in mixed alkali borate melts.—73-13949
Crystal structure of high-pressure $SrB_2O_4$(IV).—73-02195
Crystal structure of new natural borate tusionite, $MnSn[BO_3]_2$.—73-16087
Crystal structure of volkovskite, $KCa_4B_{22}O_{32}(OH)_{10}Cl{\cdot}4H_2O$, from Nepsky deposit in Eastern Siberia.—73-16097
Crystallization and formation of pressure-induced amorphous barium metaborate.—73-08589
$CuInS_2$ effect on spectral characteristics of borate and tellurite glasses.—73-14150
Deformation electron density map in $LiB_3O_5$.—73-02228
Densities and structural models resulting from extremely modified cesium and rubidium borate glasses.—73-10430
Difference-frequency generation of near-infrared picosecond pulses by noncritical temperature twinning of $LiB_3O_5$.—73-12768
Domain wall [DW] interaction with elastic waves in $FeBO_3$.—73-01453
DSC and Raman studies of lead borate and lead silicate glasses.—73-00327
Dynamics of spontaneous spin reorientation in $Fe_3BO_6$.—73-16114
Effect of uv irradiation on luminescence of sodium borate glasses activated by indium.—73-00468
Effect of water on the volatilization of sodium borate melts.—73-14364
Electric conduction of single-crystal and glass of $Li_2B_4O_7$.—73-11569
Electrical and optical properties of thermally evaporated $LiBO_2$ films.—73-12784
Electrical conductivity of sodium borate glasses containing fluorine and chlorine.—73-14172
Electron paramagnetic resonance of X-irradiated lithium thioborate glasses.—73-03726
Electron spin resonance and Mossbauer studies on crystallization process of $BaFe_{12}O_{19}$ from barium iron borate.—73-03727
Electronic structures of $BaB_2O_4$ and $LiB_3O_5$.—73-02609
Enhanced surface crystallization of ß-barium borate [BBO] on glass due to ultrasonic treatment.—73-03839
ESR [electron spin resonance] centers in thioborate and oxyborate glasses.—73-13981
Evidence of plastic deformation on slow crack growth of borate glass.—73-06410
Experimental determination of the binodal temperature in the lead borate system.—73-08623
Fluorine-containing lanthanum borate glasses colored by oxides of the *d* and *f* elements.—73-07130
Forehearth colorant.—73-03920
Formation of cobalt ferrites in glasses based on potassium aluminoborate systems.—73-00345
Generation of tunable coherent vacuum uv radiation in $LiB_3O_5$ crystals.—73-01415
Glass crystallization of $Zn_{0.5}Cd_{0.5}B_2O_4$-$La(BO_2)_3$-$VF_3$ system.—73-13993
Growth of $Li_2B_4O_7$ single crystal.—73-05831
Growth of lithium triborate (LBO) single-crystal fiber by the laser-heated pedestal growth method.—73-02847
Growth of $NdAl_3(BO_3)_4$ single crystal for miniature solid-state laser.—73-10548
High-efficiency, high-power-difference frequency generation of 0.9–1.5-*µm light in BBO* (*ß*-$BaB_2O_4$).—73-08879
Hydrolysis of borate glass surfaces.—73-07036
Hydrothermal synthesis and morphology of lithium tetraborate crystals.—73-09463
Infrared reflectance investigation of alkali diborate glasses.—73-00351
Infrared structural studies of silver ion-conducting glasses $x$AgI-$(1-x)(Ag_2O{\cdot}nB_2O_3)$.—73-14709
Intensities of Raman bands in borate glasses.—73-10383
Interfacial reactions between titanium and borate glass.—73-00245
Interrelation of change of heat content and structure of alkali borate systems in vitreous, crystalline, and liquid states.—73-02307
Intracavity frequency doubling effect of ß-$BaB_2O_4$ (BBO) in colliding pulse mode-lock (CPM) unstable resonator Nd:YAG laser.—73-08894
Lithium triborate picosecond optical parametric oscillator.—73-05588
Luminescence in the pentaborate $LiBa_3B_5O_{10}$.—73-02630
Luminescence of $Ag^+$ in crystalline and glassy $SnB_4O_7$.—73-12827
Luminescence of $Bi^{3+}$ and the energy transfer from $Bi^{3+}$ to $R^{3+}$ (R=Eu, Dy, Sm, Tb) in alkaline-earth borates.—73-05590
Luminescence of Cu(I) in strontium tetraborate.—73-02631
Magnetic susceptibility and aspects of magnetic interaction in Gd, Fe, and mixed Gd-Fe lead borate glasses.—73-03798
Magnetoelastic channel for nuclear-spin excitation in $FeBO_3$.—73-15348
Manifestation of $FeBO_3$ domain structure in [NMR] signals in strong rf fields.—73-01473
Mechanical properties and fracture behavior of some chemically strengthened silicate and borate glasses.—73-10452
Metallorganic decomposition method for preparing a metal borate.—73-12376
Mixed orthoborate pyroborates $Sr_2Sc_2B_4O_{11}$ and $Ba_2Sc_2B_4O_{11}$: pyroborate geometry.—73-02329
Molybdenum disilicide interaction with barium borate glass in air.—73-00377
Mossbauer effect and electron paramagnetic resonance studies on zinc borate glasses containing transition metal oxides.—73-03741
Mossbauer investigation of the surface and volume spin-reorientation phase transition in $Fe_3BO_6$.—73-12634
Mossbauer spectroscopic study of densified sodium borate glasses containing iron.—73-10389
$Na^+$ coordination in sodium diborate and triborate glasses by X-ray diffraction.—73-06939
Nature of paramagnetic centers in cadmium borate glasses.—73-00378
Nature of paramagnetic centers in cadmium borate glasses.—73-00379
Neutron diffraction study of excitation and damping of magnetoelastic vibrations in $FeBO_3$ crystal.—73-01476
Nonlinear optical materials based on $MBe_2BO_3F_2$ (M=Na,K).—73-12841
Paramagnetic centers in lithium thioborate glasses.—73-03748
Peculiarities of ultrasonic propagation in piezoactive superionic conductors.—73-01422
Phase matching retracing behavior for second harmonic generation in $LiB_3O_5$ crystal.—73-02662
Point defects in lithium triborate ($LiB_3O_5$) crystals.—73-03107
Powerful femtosecond pulse generation by chirped and stretched pulse parametric amplification in BBO crystals.—73-08956
Preparing granular borates.—73-05003
Raman scattering in $FeBO_3$ at high pressures: phonon coupled to spin-pair fluctuations and magnetodeformation potentials.—73-07973
Raman scattering study of lithium borate glasses.—73-03755
Raman spectral studies of borate glasses.—73-06961
Raman spectroscopy of oxide glass system $(1-x)(yB_2O_3{\cdot}zLi_2O){\cdot}xMO$ (MO=CuO, $V_2O_5$).—73-10397
Raman study of both phases of $BaB_2O_4$.—73-08719
Reactive vaporization of sodium tetraborate with water vapor.—73-06962
Retarded acid-soluble well cement compositions and methods.—73-10196
Solid solutions of ettringites: II, Incorporation of $B(OH)^{4-}$ and $CrO_4^{2-}$ in $3CaO{\cdot}Al_2O_3{\cdot}3CaSO_4{\cdot}32H_2O$.—73-10155
Specific heat and characteristic temperature of yttrium- and gadolinium-aluminum borates.—73-02438
Spectra and intensity parameters of $Li_6Y(BO_3)_3$:$Nd^{3+}$ laser crystal.—73-02689
Structural transformations in some oxyborates observed by high-resolution transmission electron microscopy.—73-03201
Structure of lithium borate glasses according to data of X-ray scattering at small angles.—73-14111
Structure-dependent effects on the magnetic behavior of Fe ions in borate and silicate glasses.—73-15369
Structure-transport relationships in lead borate glasses containing $V_2O_5$.—73-03813
Synthesis, structure, and properties of the orthoborate $SrCu_2(BO_3)_2$.—73-02508
Temperature dependence of equatorial Kerr effect in $FeBO_3$.—73-16360
Temperature dependence of SHG in NYAB crystals.—73-08771
Temperature-tuned phase-matching properties of $LiB_3O_5$ for Ti:sapphire laser frequency doubling.—73-16614
Thermal expansion and glass transition of borate melts.—73-00556
Thermal expansion and vitrification of borate melts.—73-00557
Thermal expansion of aluminum borate.—73-16627
Thermal stability of radiation defects in lithium tetraborate from EPR and optical spectroscopy data.—73-16634
Tin(IV) oxide coating of aluminum borate whiskers and alumina particles by chemical vapor deposition.—73-03062
Trends in local optical basicity in sodium borate glasses and relation to ionic mobility.—73-10492
Type-I and type-II noncritical phase matching of $LiB_3O_5$ crystal.—73-08785
Ultrasonic velocity in cesium borate glasses.—73-00571

**boria,**
$^{11}B$ MAS NMR spectra of $BO_{3/2}$-$TeO_2$ glasses.—73-06884
Ac conductivity in $B_2O_3$-$Li_2O$ films.—73-00930
Alkali-free glass.—73-00725
Characterization of microporous amorphous alumina–boria.—73-08570
Colored glass.—73-00730
Dc conductivity and hopping mechanism in $Bi_2O_3$-$B_2O_3$ glasses.—73-10427
Effect of $B_2O_3$ on viscosity and durability of glass wool.—73-14357
Electron paramagnetic resonance and optical absorption spectra of $Cu^{2+}$ ions in alkali cadmium borosulfate glasses.—73-10369
ESR of vanadyl ions in $Li_2O$-BaO-$B_2O_3$ glasses.—73-06914
Features of low-temperature relaxation transition in vitreous boric anhydride.—73-13988
Gel region and gelation behavior of alkoxide solutions in the $B_2O_3$-$Na_2O$ system.—73-05824
Glass formation and crystallization of $Y_2O_3$-BaO-CuO-$B_2O_3$ glass-ceramics.—73-08089
Glasses with very high index of refraction and low density.—73-10634
Liquation and crystallization in melts of the system $Al_2O_3$-$B_2O_3$.—73-00367
Magnetic properties of $x$$CeO_2$–$(1-x)(3B_2O_3{\cdot}PbO)$ glasses.—73-00512
Mass spectrometric study of the thermodynamic properties of melts of the $B_2O_3$-$GeO_2$-$SiO_2$ system at 1373–1453 K.—73-00371
Mass spectrometric study of the thermodynamic properties of melts of the system $B_2O_3$-$GeO_2$-$SiO_2$ at temperatures 1373–1453 K.—73-00372
Method for production of nonreducible dielectric ceramic composition.—73-01057
Method of producing low-temperature-firing dielectric ceramic composition containing $B_2O_3$.—73-11036
Microstructure of glass and crystalline phases in the system PbO-$TeO_2$-$B_2O_3$.—73-14036
Multipurpose photochromic brown glasses.—73-00750
Optical crown glass having negative anomalous partial dispersion and high uv transmission.—73-10652
Phase equilibria in the system CdO-ZnO-$B_2O_3$ at 850°C.—73-02380
Phase equilibria in the system $Na_2O$-$B_2O_3$-$Ga_2O_3$ at 600°C.—73-02382
Phase relations in the system CaO-$B_2O_3$-$SiO_2$.—73-08695
Phase relations in the system $Y_2O_3$-$B_2O_3$-$V_2O_5$ in the subsolidus region.—73-16258
Phase relations in the systems $Ln_2O_3$-$B_2O_3$-$Ta_2O_5$, where Ln=Sm, Eu, in the subsolidus region.—73-16259
Phase transformation and mechanical properties of $B_2O_3$-doped cordierite derived from complex alkoxide.—73-09237
Quantitative analysis of $B_2O_3$ in E-glass by using X-ray fluorescence spectrometer.—73-14075
Quantitative analysis of boric oxide in borosilicate glasses by electron probe microanalysis [EPMA].—73-15835
Quantum chemical computations of interparticle interactions in the structural groupings of boron oxide.—73-02408
Raman spectra of $BO_{3/2}$-$TeO_2$ glasses.—73-10396
Structure of $B_2O_3$ and alkali borates in vitreous and molten states.—73-14107
Structure of glasses of the $B_2O_3$-$Sb_2O_3$ system using small-angle X-ray scattering data.—73-01029

Thermodynamic activities in $B_2O_3$-$SiO_2$ melts at 1475 K.—73-00420
Third harmonic generation in PbO-$SiO_2$ and PbO-$B_2O_3$ glasses.—73-03816
Tick-proof ceramics.—73-05183
Viscosity of molten $Na_2O$-$B_2O_3$ slags.—73-09008
Vitreous $B_2O_3$: a geometrical study.—73-06304

**borides,**
$^{59}$Co NMR from magnetic domains in $Y_2Co_{14}B$ and $Gd_2Co_{14}B$.—73-11648
Carbothermal synthesis of binary (MX) and ternary ($M^1$, $M^2$X) carbides, nitrides, and borides from polymeric precursors.—73-12934
Characterization and oxidation resistance of hot-pressed chromium diboride.—73-17245
Comparative study of FMR [ferromagnetic resonance] and Brillouin light scattering on FeNiB alloys.—73-11649
Crystal structure of new $HoNi_2B_2$ boride.—73-02204
CVD method for forming metal boride films using metal borane cluster compounds.—73-12460
Effect of high pressure on electrical properties of europium and ytterbium hexaborides.—73-02580
Effects of carbide addition on the mechanical properties of the $Ti(C_{0.5},N_{0.5})$-30 wt% $TiB_2$-carbide sintered compacts.—73-03274
Effects of metallic boride dispersion on fracture toughness and oxidation resistance in SiC ceramics.—73-03275
Effects of metallic boride dispersion on fracture toughness and oxidation resistance in SiC ceramics.—73-13518
Electronic structure and the Fermi surfaces of antiferromagnetic $NdB_6$.—73-02259
Friction and wear characteristics of $B_4C$-$TiB_2$ ceramics and $Mo_2FeB_2$-Fe-type cermets.—73-13839
Heat-resistant sintered hard alloy.—73-00281
Influence of milling atmosphere on the magnetic properties of Nd-Fe-B alloy powders produced by mechanical grinding.—73-04617
Injection sleeve for die casting and a method of casting an aluminum or an aluminum alloy part.—73-13917
Intake or exhaust valve actuator.—73-00284
Interaction of magnesium polyboride and zinc chloride.—73-16179
Lanthanum boride type single crystal and method for growing the same.—73-02101
Low-temperature resistivity of valence fluctuation compound $SmB_6$.—73-16531
Magnetic properties of $Y_{1-x}Gd_xCo_4B$ compounds.—73-07956
Magnetic properties of $Y_2Fe_{14}B$ and $Nd_2Fe_{14}B$ single crystals.—73-15343
Material response of diboride matrix composites to low-pressure-simulated hypersonic flows.—73-12435
Mechanism of reaction sintering of iron–iron boride cermets.—73-06822
Microstructure and properties of niobium diboride particulate-reinforced silicon carbide composites.—73-09485
Mossbauer study of spin-reorientation in $YCo_4B$.—73-02334
Neutron scattering study of the intermediate-valent ground state in $SmB_6$.—73-08677
New type of $Ho_2Ni_{10}B_5$ boride structure.—73-02355
Origin of the anomalous temperature dependence of the Nd sublattice magnetization in $Nd_2Fe_{14}B$.—73-01478
Point-contact spectroscopy of $La_{1-x}Ce_xB_6$.—73-08703
Point-contact spectroscopy of $LaCeAl_2$ and $LaCeB_6$ alloys.—73-08704
Preparation and formation process of $HfB_2$ fine powders by Mg thermite method.—73-05961
Preparation and formation process of $HfB_2$ fine powders by Mg thermite method.—73-16908
Processing TiZrC and $TiZrB_2$.—73-08538
Refinement of structural type of $Mo_2B_5$.—73-16291
Stress dependence of magnetic properties of an Fe-Ni-B alloy.—73-04654
Structural evolution of nanocrystalline $Fe_{73.5}Cu_1Nb_3Si_{13.5}B_9$.—73-15366
Structure modification of radio frequency sputtered $LaB_6$ thin films by internal stress.—73-03030
Superconductivity at 12 K in $YNi_4B$ system.—73-15637
Synthesis of Fe-B system thin films from powder mixtures under the influence of laser radiation.—73-09355
Thermal expansion anomalies of $YCo_4B$ compounds.—73-05656
Thermodynamic properties of vanadium diboride in wide temperature ranges.—73-16378

**boron carbide,**
Borate glass containing boron carbide burnable poison coating.—73-02023
Boron carbide-aluminum cermets having microstructures tailored by a post-densification heat treatment.—73-10301
Boron carbide.—73-12260
Characterization of boron carbide thin films fabricated by plasma-enhanced chemical vapor deposition from boranes.—73-12751
Corrosion resistance of boron carbide powders.—73-16434
Cubic boron nitride carbide films.—73-15986
CVD synthesis and thermoelectric properties of boron carbide.—73-02760
CVD synthesis and thermoelectric properties of boron carbide.—73-12966
Determination of $B_4C$ in refractories containing graphite.—73-00797
Mechanical properties of reaction-sintered materials based on boron carbide.—73-03336
Method for reducing metal content of self-supporting composite bodies and articles formed thereby.—73-00288
Microstructure and thermal stability of coatings obtained by interaction of SiC and $B_4C$ with Cr and Ti powders.—73-13874
Microstructure of $B_4C/TiB_2$ composite fabricated by reaction sintering of $B_4C$ and TiC.—73-17168
Microstructure of boron carbide.—73-06257
Oxidation of $TiB_2$-20 vol% $B_4$ composite.—73-09534
Plasma spraying of boron carbide using pressures up to two bar.—73-09245
Plasma-sprayed $B_4C$ coatings in controlled fusion reactors.—73-09246
Plasma-sprayed $B_4C$ coatings in controlled fusion reactors.—73-13879
Preparation of nanophase SiC/$Si_3N_4$, SiC/$B_4C$, and stoichiometric SiC from mixtures of a vinylic polysilane [VPS] and metal powders.—73-05977
Pressure-assisted technique for forming self-supporting composite bodies and articles formed thereby.—73-05004
Pressureless sintering and related reaction phenomena of $Al_2O_3$-doped $B_4C$.—73-05992
Process for microwave sintering boron carbide.—73-05328
Reaction processes in the interior of an MgO-carbon brick with boron carbide additive.—73-13891
Reaction processing of AlN/$B_4C$ composites.—73-05334
Self-supporting bodies.—73-10347
Structural homogeneity of boron carbide thin films fabricated using plasma-enhanced chemical vapor deposition from $B_5H_9$+$CH_4$.—73-12698
Synthesis and mechanical properties of $B_4C$ by self-propagating high-temperature synthesis chemical furnace.—73-13294
Thermoelectric properties of CVD boron carbide.—73-16637
$TiB_2$-$B_4C$ composites pressureless sintered using Ni and C as densification aids.—73-17060
$TiB_2$-$B_4C$ composites pressureless-sintered [at 1600°C] using Ni and C as densification aids.—73-06119

**boron nitride,**
Ab initio calculation of band structure, X-ray emission, quantum yield, and electron-energy-loss spectra of hexagonal boron nitride.—73-07281
Abrasive compact of cubic boron nitride and method of making [the] same.—73-09768
Application of a polymeric boron nitride precursor as a matrix in carbon fibers.—73-09019
Boron nitride membrane in wafer structure.—73-05287
Boron nitride system including an hBN starting material with a catalyst and a sintered cBN body having a high heat conductivity based on the catalyst.—73-15977
Boron nitride thin films by microwave ECR plasma chemical vapor deposition.—73-12927
Boron nitride thin films on Si(100) by MOCVD.—73-14786
Boron nitride thin-film deposition using electron cyclotron resonance microwave plasmas.—73-09024
Boron nitride-containing bodies and method of making the same.—73-15978
Boron nitride.—73-12261
Boron-nitride-coated microcutting device.—73-10302
Brazing of cubic boron nitride abrasive crystals to steel substrate with alloys containing Cr or Ti.—73-13803
Ceramic-filled thermally conductive composite containing fusible semicrystalline polyamide and/or polybenzocyclobutenes for use in microelectronic applications.—73-01046
Characterization of dip-coated boron nitride on silicon carbide fibers.—73-08568
Chemical synthesis of an aluminum nitride/boron nitride nanostructured composite material.—73-16672
Chemical vapor infiltration of boron nitride interphase in ceramic fiber preforms: discussion of some aspects of the fundamentals of the isothermal chemical vapor infiltration process.—73-02746
Coating for improved retention of cBN in vitreous bond matrices.—73-09770
Composite tactical hard body armor.—73-10308
Cubic boron nitride carbide films.—73-15986
Cubic boron nitride crystallites grown by laser-induced plasma CVD.—73-02758
Cubic boron nitride phosphide films.—73-15987
Cubic boron nitride-base sintered ceramics for cutting tool.—73-15988
Current research problems and opportunities in the vapor phase synthesis of diamond and cubic boron nitride.—73-02759
Defect-induced control of the structure of boron nitride.—73-12461
Deposition of wear-resistant BN coatings by rf plasma-assisted chemical vapor deposition.—73-03573
Diamond semiconductor device having a non-doped diamond layer formed between a BN substrate and an active diamond layer.—73-11521
ECR CVD method for forming BN films.—73-12464
Effect of BN addition on the sintering and electrical properties of Y-doped $BaTiO_3$ ceramics.—73-12998
Effects of self-bias voltage on formation of cBN film.—73-16126
Evaluation of the interfacial mechanical properties of fiber-reinforced boron nitride matrix composites.—73-17311
Fabrication of carbon-fiber-reinforced hBN composites.—73-16771
Fibrous monolithic ceramics: III. Mechanical properties and oxidation behavior of the silicon carbide/boron nitride system.—73-09597
Fundamental research on the deposition of cubic boron nitride films on curved substrates by ion-beam-assisted vapor deposition.—73-05820
Growth of BN by hot-filament-assisted electron beam deposition.—73-16808
Helix-type traveling wave tube structure with supporting rods covered with boron nitride or artificial diamond.—73-05302
Helix-type traveling wave tube structure with supporting rods covered with boron nitride or artificial diamond.—73-10316
Hexagonal boron nitride synthesis by nitrogen ion implantation of boron films.—73-16814
High-pressure/high-temperature piston-cylinder apparatus.—73-00282
Hot filament activated chemical vapor deposition of boron nitride.—73-02851
Hot-pressed BN-AlN ceramic composites with high thermal conductivity: III.—73-16821
Hydrothermal corrosion of hexagonal boron nitride.—73-09527
Hydrothermal corrosion of hexagonal boron nitride.—73-17223
In situ formation of boron nitride interfaces on Nextel 312 continuous ceramic fiber: I, Nitriding process and Blackglas ceramic matrix composite properties.—73-17353
In situ formation of boron nitride interfaces on Nextel 312 continuous ceramic fiber: II, Oxidation of Blackglas ceramic matrix composites.—73-17354
Industrial diamonds, diamond and cBN products, diamond and diamondlike films—emerging applications and markets.—73-09721
Influence of the B/N ratio on the elaboration of cubic boron nitride.—73-16175
Interface characterization by TEM, AES, and SIMS in tough SiC (ex-PCS) fiber–SiC (CVI) matrix composites with a BN interphase.—73-09470
Interfacial microstructure and chemistry of SiC/BN dual-coated Nicalon fiber-reinforced glass-ceramic matrix composites.—73-09471
Interfacial shear strength evaluation of ceramic-coated carbon fibers.—73-13556
Ion plating deposits of boron nitride, an FTIR structural characterization.—73-13106
Ir spectroscopy characterization of various types of structural irregularities in pyrolytic boron nitride.—73-12616
Kinetics of deoxidizing of hexagonal boron nitride preparations.—73-09415
Laser deposition of crystalline boron nitride films.—73-05306
Low-dielectric-constant interlayer insulation for multilevel metallization.—73-04129
Mechanism of oxidation and nonstoichiometry of cBN.—73-06310
Mechanism of oxidation of ß-BN.—73-13478
Metallurgy of cBN and its wear in high-speed machining of ferrous materials.—73-05268
Method for manufacturing rings or disks having a blade or vane rim.—73-01865
Method for reducing metal content of self-supporting composite bodies and articles formed thereby.—73-00288
Method of chemical vapor deposition of boron nitride using polymeric cyanoborane.—73-16004
Method of fabricating a transistor having a cubic boron nitride layer.—73-01376
Method of forming ohmic contact electrodes for *n*-type semiconductor cubic boron nitride.—73-11531
Method of making hard boron nitride by a plasma CVD method employing beam irradiation.—73-12494
Microstructure of pressureless-sintered hBN.—73-06259
MINDO molecular orbit description of three phases of BN.—73-08668
Modeling and computer simulation of ion-beam- and plasma-assisted film growth.—73-05929
Multistepped submerged nozzle for continuous casting.—73-14605
Neutron diffraction study of $Y_2Fe_{14}BN_{1-\delta}$.—73-02347
New technique for material synthesis by utilizing shock wave interaction and its application to the synthesis of B-C-N system.—73-16879
Novel phases in shock-compacted mixtures of diamond and boron nitride.—73-16234
Ohmic contact electrodes for *n*-type semiconductor cubic boron nitride.—73-11536
Optical properties of cubic boron nitride films made by a reactive ion plating method.—73-05604
Oxidation kinetics of hexagonal boron nitride powder.—73-17231
Oxidation of a composite material based on cubic boron nitride.—73-13484
Palladium thick-film resistor containing boron nitride.—73-04227
Photoinduced phase inhibition during growth of boron nitride thin films.—73-05946
Plasma deposition of BN, BCN:H, and Me-BCN:H films using N-trimethylborazine (M=Ti, Nb).—73-09241
Postradiation defects in neutron-irradiated pyrolytic boron nitride.—73-13364
Preparation and mechanical properties of SiC/BN/SiC composites using different BN coating methods.—73-09658
Pressure-assisted technique for forming self-supporting composite bodies and articles formed thereby.—73-05004
Process for forming a crack-free boron nitride coating on a carbon structure.—73-12509
Process for making coated abrasives for grinding wheels.—73-09773
Process for preparing polycrystalline cBN ceramic masses and resulting product.—73-16011
Properties of mixed-phase BN films deposited by rf PECVD.—73-12870
Reaction sintering of cubic boron nitride using volatile catalysts.—73-02990
Reactions between molten aluminum and pyrolytic boron nitride crucibles.—73-11413
Reactivity between BN composite ceramics and molten stainless steel.—73-00848

Regularities of pyrolytic boron nitride coating formation on a graphite matrix.—73-13442
Role of gas-phase reactions in boron nitride growth by chemical vapor deposition.—73-09308
Self-supporting composite bodies.—73-10348
Semiconductor device having a ternary boron nitride film and a method for forming the same.—73-15242
Shape resonance in the X-ray absorption spectra of hexagonal boron nitride crystal.—73-02428
Shock compressibility of the sphalerite modification of boron nitride.—73-06036
Shock-induced mechanisms of phase transformation from rhombohedral BN to cubic BN.—73-08730
Silicon boron nitride ceramic and precursor compounds, a process for their preparation and their use.—73-02135
Silicon nitride/boron nitride composite with enhanced fracture toughness.—73-16017
Structural aspect of wurtzite boron nitride phase stabilization.—73-12694
Structural characterization of preferentially oriented cubic BN films grown on Si(001) substrates.—73-06288
Structural features of boron nitride dense phase formation from rhombohedral modification under high static pressure.—73-17200
Submillimeter optical properties of hexagonal boron nitride.—73-02696
Superabrasives for grinding alloys.—73-03416
Surface activity of a boron nitride powder: a vibrational study.—73-09513
Surface species on a submicronic boron nitride powder—a starting FTIR characterization.—73-13456
Synthesis of cubic boron nitride using Mg and pure or M′-doped $Li_3N$, $Ca_3N_2$, and $Mg_3N_2$ with M′=Al, B, Si, Ti.—73-09354
Synthesis of $Fe_xN$/BN [$x$=3 or 4] magnetic nanocomposite via chemical processing.—73-07979
Synthesis of polycrystalline cubic boron nitride.—73-05346
Synthesis of polycrystalline cubic boron nitride.—73-16020
Synthesis of translucent sintered cubic boron nitride.—73-17048
Thermal decomposition of borazane $BH_3NH_3$ under HIP conditions and of the structural evolution of the products of pyrolysis.—73-13323
True vit: vitrified-bond cBN grinding wheels offer unique benefits.—73-05280
Try hard turning.—73-05281
Wear mechanisms of ultrahard, nonmetallic cutting materials.—73-06551
Wear-resistant [BN] coating films and their coated articles.—73-16023
X-ray photoelectron spectroscopy and secondary ion mass spectrometry of boron nitride thin films on austenitic stainless steel.—73-03668

**boron,**
Advances of boron analysis in glass and ceramics.—73-00303
Atomic and electronic structure of B/Si(100).—73-12539
Boron and its "hazy behavior."—73-00306

Light transmission of porous plates obtained from two-phase sodium borosilicate glasses of various structures.—73-00509
Local environment of cobalt atoms in borosilicate glasses.—73-00368
Local surroundings of cobalt atoms in borosilicate glasses.—73-00369
Long-term alteration of borosilicate waste glasses.—73-06936
Method of joining corrugated glass plates of borosilicate glass.—73-03947
Micro-glass-balloon "CEL-STAR."—73-00515
Middle- and small-scale electric glass-melting furnaces.—73-05121
Modification of the pore structure and surface properties of controlled pore glasses.—73-00668
Nature of double refraction of microporous glasses.—73-00519
Nitridation of silicate and borosilicate glasses prepared by sol-gel process.—73-06943
Novel porous glass with chemical resistance and good shaping ability prepared from borosilicate glass containing ZnO.—73-00672
Otto Schott and the invention of borosilicate glass.—73-09735
Peculiarities in the kinetics of isothermal growth of particle size of the dispersed phase in liquifying sodium borosilicate glass.—73-00384
Phase separation in sodium borosilicate glass with additions of the oxides $ZrO_2$ and CaO.—73-00386
Phase separation in sodium borosilicate glass with $ZrO_2$ and CaO additives.—73-00387
Phase separation of halogen-containing sodium borosilicate glasses.—73-00388
Phase separation of halogen-containing sodium borosilicate glasses.—73-10392
Photoconductivity of PbO-doped borosilicate glass prepared by the sol-gel process.—73-10469
Polyselenide formation in borosilicate glasses.—73-03751
Preparation and properties of bonding glass for amorphous magnetic head.—73-10473
Preparation by a sol-gel process of borosilicate glasses containing microcrystals of tellurium and zinc telluride.—73-14473
Preparation of PbS quantum dot materials by the sol-gel process.—73-03873
Preparation of PbS quantum dot materials by the sol-gel process.—73-11402
Preparation of quantum-size CdS-doped $Na_2O$-$B_2O_3$-$SiO_2$ glasses with high nonlinearity.—73-10584
Properties of sodium borosilicate glasses/$Al_2O_3$-sintered composites containing fluorides.—73-16579
Quantitative analysis of boric oxide in borosilicate glasses by electron probe microanalysis [EPMA].—73-15835
Quantitative chemical analysis of borosilicate glasses by the inductively coupled plasma-atomic emission spectroscopy method.—73-03754
Radioactive demonstration of DWPF [Defense Waste Processing Facility] product control strategy.—73-08307
Raman study of sodium borosilicate glass containing cobalt oxide.—73-00393
Relationship between borosilicate glass composition, structure, and durability test response.—73-06965
Shape of complex impedance arcs for alkali ion conducting glasses.—73-04165
Sintering and mechanism of crystallization prevention of alumina-filled borosilicate glass.—73-13259
Sintering behavior of arranged ceramic short-fiber-reinforced glass matrix composites.—73-14492
Sol-gel processing of an entirely new family of mixed valence glasses.—73-10604
Structure of sodium borosilicate glass with additions of cobalt oxide studied by Raman spectroscopy.—73-00417
TEM observation of submicrocrystals in borosilicate glass.—73-03769
Temperature dependence of corrosion of refractories in barium borosilicate glass melts.—73-07225
Thermal expansion of potassium borosilicate glasses.—73-00559
Thermal expansion of potassium borosilicate glasses.—73-00560
Thermal expansion of sodium borosilicate glasses.—73-00561
Thermal expansion of sodium borosilicate glasses.—73-00562
Thermal fatigue of glass.—73-03815
Ultrasonic sol/gel processing of aluminoborosilicate glass and its composite with carbon fiber reinforcement.—73-03899
Ultraviolet absorbing [borosilicate] glasses.—73-14561
Use of rasorite as a source of boron in borosilicate glasses.—73-00717
Viscosity of potassium borosilicate glasses in the glass transition region.—73-00574
Viscosity of potassium borosilicate glasses in the vitrification interval.—73-00575
Viscosity of sodium borosilicate glasses in the glass transition range.—73-00576
Viscosity of sodium borosilicate glasses in the vitrification range.—73-00577
Viscous sintering of nonspherical borosilicate glass powder.—73-10617
Volatilization of type E borosilicate glass.—73-00426

**borosilicates,**
Anorthite and thermal expansion of CaO-$Al_2O_3$-$SiO_2$-$B_2O_3$ ceramics.—73-12746
Ceramic composite of aluminoborosilicate fibers coated with several layers.—73-05290

Conditions for alkali-borosilicate solution synthesis with europium introduction to manufacture hollow glass microspheres.—73-14342
Conductivity enhancement mechanism of interstitial-type $Li^+$ conductor, $Li_{4+x}B_xSi_{1-x}O_4$ ($0 \le x \le 0.7$).—73-04068
Glasses made of pink borosilicates, their manufacture, and articles made of such glasses.—73-10633
Melting properties of $PbO$-$B_2O_3$-$SiO_2$ system flux.—73-10564
Rare-earth-containing frits having a high glass transition temperature and their use for the production of enamels having improved heat resistance.—73-03965
Sulfate as a selective redox buffer for borosilicate melts.—73-10409
Synthesis of a new porous borosilicate with the levyne structure.—73-06087

**boundary layer,**
Characterization of insulating boundary layers of BL [boundary layer] capacitors.—73-14682
Evolution process of antiphase boundaries in GaAs on Si.—73-04335
Grain-boundary structure of $Bi_2O_3$-diffused BL capacitor.—73-10953
Twin boundaries' role in superconducting properties' formation of single-crystal $YBa_2Cu_3O_{7-x}$.—73-04823

**brazing,**
Brazing of cubic boron nitride abrasive crystals to steel substrate with alloys containing Cr or Ti.—73-13803
Brazing titanium vapor-coated zirconia.—73-10199
Effect of surface preparation on strength of ceramic joints brazed with active filler metal.—73-03582
Interfacial structure of $Si_3N_4$ brazed with an Ag-Cu-Ti alloy.—73-03610
Joining ceramics by brazing.—73-13108
Metallurgical behavior during brazing of Ni-base alloy Inconel 600 to $Si_3N_4$ with Ag71Cu27Ti2 filler metal.—73-06826
Method of forming tappet of the kind having ceramic seat plate.—73-03694
Microstructural study of $Al_2O_3$/Ti joints brazed with different Ag-Cu filler metals.—73-03618
Microstructural study of alumina brazed with a copper-nickel-zirconium alloy.—73-03619
Promoting the wetting and brazing of ceramics.—73-03635
Segregation of chromium at the interface between Ni-Cr-Si-Ti brazing filler metal and $Si_3N_4$ ceramics.—73-00265

**breakdown,**
Breakdown mechanism in buried silicon oxide films.—73-07284
Models for breakdown-resistant dielectric and ferroelectric ceramics.—73-07900
New theory for the dielectric breakdown of solid dielectrics.—73-01000

**brick industry,**
Building a brickworks from scratch.—73-10674
Ceramic brick production making use of coal mining wastes of Ekibastuzsky basin.—73-00766
Development and trends in the erection of heavy clay works.—73-04910
Development of the brick and roofing tile industry.—73-10675
Effect of the Heat Utilization Order on production processes in the brick and tile industry.—73-05111
Energy savings in the brick and tile industry.—73-04916
Export successes for Australian brick plant manufacturer.—73-10680
Fast firing technology in the brick and tile industry—economic considerations.—73-05116
New generation in ceramic manufacture.—73-10685
Situation of the brick and tile industry in Greece.—73-03406

**brick,**
200 years of industrial and commercial building with bricks.—73-00015
Application of $Cr_2O_3$-bearing–magnesia raw materials to magnesia-carbon bricks.—73-00776
Batch composition for unfired bricks.—73-09826
Behavior of boric compounds added in MgO-C bricks.—73-00779
Brick made from iron ore tails without pressing, firing, and steam curing.—73-06629
Bricks containing electric arc furnace dust.—73-03987
Bricks fired from mixture of coal spoil and fly ash.—73-10673
Brickwork products.—73-03988
Building material based on the wastes of tungsten and molybdenum integrated works.—73-03976
Dependence of mechanical properties of MgO-C bricks on graphite content.—73-17273
Development of bricks using fluidized bed slag and their production.—73-06646
Development of corundum brick with low $SiO_2$ content and its applications.—73-14585
Development of imitation granite porcelain brick.—73-10820
Developments in forming machine for silicate brick in China.—73-12131
Dynamic simulation of drying process of perforated clay brick.—73-07190
Effect of aging on properties of brickmaking raw materials: I.—73-10676
Effect of aging on properties of brickmaking raw materials: II.—73-10677
Effect of particle size distribution of coal gangue on properties of fired products.—73-09082
Effects of coal gangue additives on quality of clay brick.—73-10678
Evaluation of strength testing results of wall bricks.—73-10679
Fabrication of nonfired brick using lead-zinc tails.—73-06653
Further development of magnesia spinel bricks with their own specific properties for lining the transition and sintering zones of rotary cement kilns.—73-04005
Influence of heat-treatment conditions on the properties of MgO-C bricks containing aluminum.—73-17359
Limiting efflorescence and leaching in facing brick masonry—causes, reduction through technological measures, additives, and posttreatment.—73-07192
Lining of the oblique movement zone of a unit for dry quenching of coke after service.—73-00830
Lodge Lane Brickworks: a breakthrough in the reduction firing of bricks.—73-00770
Low-temperature rapid burning of bricks.—73-00771
Manufacture of cement–unused fly ash bricks without firing or steam curing.—73-06683
Methods of reducing overburnt specks in internal-fired bricks.—73-10684
New ceramic brick production technologies.—73-14564
Nonfired and nonautoclaved fly ash bricks.—73-10070
Once firing of wet green bricks in annular kilns.—73-07193
Once setting-firing of surplus heat firing perforated brick of coal gangue.—73-08354
Oxidizing prevention of MgO-C bricks for converter.—73-00833
Permeability of MgO-C bricks.—73-00837
Problems in production of autoclaved lime–fly ash bricks and their preventive measures.—73-10096
Production of foam glass brick with phlogopite.—73-10586
Production of nonfired and nonsteam-cured brick with blast-furnace slags.—73-06701
Production of perforated bricks using architectural discard residues.—73-07194
Production processes of semidry pressed bricks.—73-07195
Production technology for color glass face brick.—73-10588
Rapid drying of non-load-bearing perforated bricks.—73-10688
Removal of explosive crack of lime in coal gangue brick by dripping water.—73-10690
Reparation of large area setting slump in annular kiln preheat zone during firing.—73-12239
Research and modeling of carbon combustion diffusion kinetics during burning of fuel-containing ceramics under commercial production conditions.—73-15753
Resisting the heat.—73-04947
Semidry pressing process for calcium silicate bricks.—73-10147
Soft mud method of brickmaking—an overview of the essential aspects of the process.—73-03985
Technological lines for small capacity plants.—73-14566
Unfired bricks from colliery spoil.—73-06729

**brickmaking equipment,**
Brickworks with sea view.—73-03975
Comparison and selection of two kinds of pneumatic clutches.—73-12119
Hammer crusher of automatic spray discharge.—73-12032
Lodge Lane Brickworks: a breakthrough in the reduction firing of bricks.—73-00770
New type [of] hydraulic pusher.—73-12173
Reforming common clay–brick production line into perforated brick one.—73-10689
Relations between worm rotating speeds and relative parameters of extruders.—73-08361
Shuang Ya Shan brick plant.—73-10691

**bridging,**
Connected cadmium selenide nanocrystallite networks.—73-04275
Instability of polycrystalline bridges that span cracks in powder films densified on a substrate.—73-06235
Microwave properties of high-$T_c$ $Y_1Ba_2Cu_3O_x$ superconducting bridges on $Y_2BaCuO_5$ substrates.—73-08136
Molecular modeling of oxygen bridges in amorphous and crystalline silicates and aluminosilicates.—73-00375

**brittle materials,**
Actual contribution of crack deflection in toughening platelet-reinforced brittle-matrix composites.—73-06322
Advances in the design of toughened ceramics.—73-03234
Contact damage submitted to thermal shock: a method to evaluate and simulate thermal shock resistance of brittle materials.—73-08829
Controlled crack growth testing of brittle materials.—73-15784
Cracking of brittle films on elastic substrates.—73-17263
Debond coating requirements for brittle matrix composites.—73-13501
Design of ultraprecision grinding machines for ductile mode grinding of brittle materials.—73-06371
Discriminating between fracture criteria in the prediction of failure probability of brittle materials.—73-13503
Effect of chemical interaction on Barenblatt crack profiles in brittle solids.—73-16454
Effect of fiber orientation on the fracture toughness of brittle matrix composites.—73-17286
Elastic stress fields caused by sliding microindentation of brittle materials.—73-06402
Engineering ductile fracture in brittle matrix composites.—73-09590
Estimating lower-bound fracture parameters for brittle materials.—73-13524
Flexural properties of brittle multilayer materials: I, Modeling.—73-06424
Flexural properties of brittle multilayer materials: II, Experiments.—73-17321
Fracture mechanics and mechanisms of fiber-reinforced brittle matrix composites.—73-03297
Fracture of brittle spheres under compression and impact loading: I, Elastic stress distributions.—73-08873
Full-cell cracking mode in unidirectional brittle matrix composites.—73-03304
Griffith criteria for brittle fracture in compression.—73-13544
Measurement of properties of brittle matrix composites.—73-03323
Mechanics of toughness development in ductile phase-reinforced brittle matrix composites.—73-17394
Mechanistically based fatigue-damage evolution model for brittle matrix fiber-reinforced composites.—73-13570
Microcrack toughening mechanism in brittle matrix composites.—73-06489
Microcrack tunneling in brittle matrix composites driven by thermal expansion mismatch.—73-17397
Multiple cracking and interface debonding in a brittle film on a ductile rod.—73-08423
New method for evaluating fracture toughness of brittle materials.—73-13575
New method to compute size-independent fracture toughness values for brittle materials.—73-13576
Numerical evaluation of failure theories for brittle materials.—73-17407
Predicting the shock [impact] strength of targets made of brittle materials.—73-06502
Quantification of microcracking in brittle matrix composites.—73-05081
Relationship between Weibull moduli for tensile and bonding fracture strength of brittle solids (the case of a three-parameter Weibull distribution).—73-13583
Statistics of brittle failure in multiaxial stress states.—73-03355
Strength and toughness measurement of thin brittle coatings on substrates: I, Theory and measurement.—73-13592
Strength and toughness measurement of thin brittle coatings on substrates: II, Experimental determination.—73-13593
Strength variability in brittle materials with stabilizing and destabilizing resistance fields.—73-06530
Three-body abrasion of brittle materials as studied by lapping.—73-07092
Toughening and crack tip shielding in brittle materials by residually stressed thin films.—73-03369
Toughening in brittle systems by ductile bridging ligaments.—73-17448
Work-of-fracture determination for brittle materials.—73-06552

**brittleness,**
Brittleness of mineral wool fibers.—73-02731
Kinetics of brittle fracture and possibilities of its prediction.—73-17369

**bromides,**
Anomalous paraelectric behavior of hydroxyl ion in a cesium bromide crystal.—73-08552
Crystal structure of $Cs_3CdBr_5$ and $(NH_4)_{2.34}Rb_{0.66}ZnBr_5$.—73-16083
Growth of high-quality *p*-type GaAs epitaxial layers using carbon tetrabromide by gas-source molecular beam epitaxy [GSMBE] and molecular beam epitaxy.—73-11236
Phase *p*-*T* diagrams of $Cs_2RbDyF_6$ and $Cs_2NaTmBr_6$ elpasolites.—73-16245
Phase diagram and enhanced electrical transport in KBr-NaBr mixed crystals.—73-02375
Solution flow rate effects on the response time of selective electrodes having iodide and bromide functions.—73-14732
X-ray diffraction study of high-temperature modification of $Rb_2ZnBr_4$, *T*=368 K.—73-02543

**bromine,**
Thermal expansion coefficient of glass and melts of the system Te-Br.—73-00558
Vitrification and structure of glasses of the $GeSe_2$-$GeBr_4$ system.—73-00424

**bronze,**
Crystal structure of the cesium bronze $Cs(Mo_{0.95}W_{0.05})_2O_{21}$.—73-02215
Electronic properties of $Na_{0.33}V_2O_5$ bronze obtained by the sol-gel process.—73-02608
Magnetic and electronic transport properties of the monophosphate tungsten bronze $(PO_2)_4(WO_3)_{2m}$, $m$=2.—73-03101
New oxidation process of potassium titanium dioxide bronze with the hollandite structure.—73-02901
Niobium phosphate bronze $\beta$-$K_2Nb_8P_4O_{25}$, second form of the first member of the series $(K_3Nb_6P_4O_{26})_xKNb_2PO_9$.—73-02358
Niobium phosphate bronze closely related to the $Ba_3Nb_6Si_4O_{26}$ structure: $Na_6Nb_8P_5O_{35}$.—73-02359
Raman spectroscopic study of $K_{0.3}MoO_3$ in charge density wave (CDW) states.—73-05467
Thermodynamic and structural considerations of insertion reactions in lithium vanadium bronze structures.—73-02524

**bubbles,**
Approach to formation procedure of glaze bubble.—73-10797
Automated mass spectrometer for analysis of gas bubbles in glass.—73-08376
Bubble generation at glass/refractory interfaces: a review of fundamental mechanisms and practical considerations.—73-10705
Bubbler systems can abet melting operations.—73-10501
Bubbling in glass furnaces.—73-00591
Bubbling in the three-dimensional flow-temperature model.—73-14332
Computer-aided tracing of bubbles—glass quality control.—73-14341
Glass composition for glass bubbles with increased compressive strength.—73-10628
Homogenization of glass melts by bubbling.—73-14405
Magnetic bubble in light wave field.—73-15334
Micro-glass-balloon "CEL-STAR."—73-00515
Origin of pinholes in porcelain glazes.—73-00920
Refractory-glass outgassing—a test procedure evaluation.—73-14619

**building materials,**
200 years of industrial and commercial building with bricks.—73-00015
Babcock-BSH supplies for new plasterboard works.—73-13680
Building materials based on industrial wastes.—73-01978
Ceramic building block.—73-15935
Glass-ceramic marble of MgO-$Al_2O_3$-$SiO_2$ system.—73-10545
Manufacture of fired hollow blocks of fly ash.—73-08350
Modern state of technology of glass-ceramic for construction.—73-10459
New applications for glass in the modern building industry.—73-09731
New architectural glass.—73-10460
Physical properties of the glass used for comfort in buildings.—73-14251
Possibilities of utilization of wastes from desulfurization in building materials manufacturing.—73-10088
Prevention of cracking in self-leveling flooring material (SL) by adding silicone.—73-13765
Quality assurance of building materials [in Hungary].—73-13638
Quantitative analysis of pore structure on frost durability of inorganic building materials.—73-03188
Situation of new types of Chinese building material and proposals for it.—73-13645
Technology and application of BauMix cellular concrete.—73-00196
Thermal expansion of ceramic for building materials.—73-04050
Thermal expansion of ceramic for building materials.—73-14670
Trends in cellular concrete application for construction.—73-13791
**bulk modulus,**
Piezoelectric measurement of bulk modulus.—73-11598
**burners/burning,**
Characterization of burning condition of cement clinker by X-ray diffractometry.—73-00035
Development of AB series of burners on horizontal ampoule production line.—73-05109
Gas-distributing and infrared-radiating block assembly.—73-04031
Industrial experience with oxyfuel-fired glass melters.—73-15880
Influence of burning atmosphere on distribution of minor and trace element in clinker and formation of brown color clinker.—73-10005
Influence of raw mix burnability on cement clinker.—73-03487
Low-$NO_x$ staged air-recirculating burner undergoing field trials after excellent test performance.—73-08479
Low-temperature rapid burning of bricks.—73-00771
Method of making a ceramic burner head.—73-10783
Mexican success with regenerative ceramic burners.—73-12230
Photochemical hole burning in optical materials.—73-02919
Precessing jet [P.J.] gas burner—a low $NO_x$ burner providing process efficiency and product quality improvements.—73-05129
Regenerative burners and the glass industry.—73-08484
Safe burning of cement raw mixes.—73-03534
Safety and ecological problems in burning energy-saving raw materials.—73-10145
Thermal treatment of cement raw materials through intensive heat exchange.—73-10180
Waste burning and thermal destruction of organic compounds in kilns.—73-03557
**cable,**
Method of manufacturing a superconductive cable.—73-15687
**cadmium oxide,**
Determination of crystal structure of $Bi_2Cd_4O_7$ by powder roentgenography technique.—73-16107
Influence of oxygen partial pressure on the physical behavior of CdO films prepared by activated reactive evaporation.—73-05584
Local structure around aluminum in glasses of the system $Al_2O_3$-PbO-CdO.—73-06935
Phase equilibria in the system CdO-ZnO-$B_2O_3$ at 850°C.—73-02380
Schottky diodes on *n*-type InP with $CdO_x$ interfacial layers grown by the adsorption and oxidation method.—73-11438
Structure of CdO-$SiO_2$ low-silica-content inverted glasses.—73-14108
**cadmium selenide,**
Characteristics of the diffusion and drift of nonequilibrium carriers in $CdCr_2Se_4$.—73-03080
Composition control by photoirradiation in MOVPE of ZnCdSe and ZnCdS alloy layers and multilayered structures.—73-04273
Connected cadmium selenide nanocrystallite networks.—73-04275
Depolarization of vibrational modes in $CdGa_2Se_4$ crystals.—73-01123
Effect of frit compositions on the glass transition temperature, water durability, and coloring of the CdS-CdSe pigment containing low-temperature porcelain red enamel in the system $SiO_2$-$B_2O_3$-$Na_2O$-$K_2O$-$Li_2O$-ZnO-$Al_2O_3$-$ZrO_2$-F.—73-14358
Enhancement of photosensitivity in chemically deposited CdSe thin films by air annealing.—73-07504
Epitaxial electrodeposition of CdSe nanocrystals on gold.—73-14891
Exciton piezospectroscopy of semiconductor solid solutions [SS] with sphalerite wurtzite structural phase transition.—73-01160
Exciton properties of $Zn_{1-x}Cd_xSe$/ZnSe quantum well structures grown by metallorganic vapor phase epitaxy.—73-04340
Exciton-La and -Ta phonon couplings in spherical semiconductor microcrystallite.—73-07520
Experimental and theoretical investigation of femtosecond carrier relaxation in CdSe.—73-07521
Femtosecond dephasing in $CdS_xSe_{1-x}$ mixed crystals: the role of localized biexcitons.—73-14921
Growth of Cd(S,Se) nanocrystals in silicate glasses: high-resolution electron microscopy and small-angle X-ray scattering.—73-00350
Growth of HgSe and $Hg_{1-x}Cd_xSe$ thin films by molecular beam epitaxy.—73-11234
Hall effect and resistivity characterization of doped, electrodeposited CdSe.—73-01181
Influence of heat treatment on structure and properties of electrodeposited CdSe or Cd(Te, Se) semiconductor coatings.—73-07593
Ir nonlinearity of commercial Cd(S,Se) glass composites.—73-01224
Magnetization step of isolated $Co^{2+}$ ions in hexagonal $Cd_{1-x}Co_xS$ and $Cd_{1-x}Co_xSe$.—73-15031
Magnetooptical effects in $CdS_xSe_{1-x}$ microcrystallites.—73-15032
Magnetooptical properties of $Cd_{1-x}Mn_xSe$ microcrystallites in $SiO_2$ glass prepared by rf sputtering.—73-02641
Masses of quantum-size hole subbands of semiconductor heterostructures with different orientations.—73-15037
Microstructure and optical properties of CdSe-microcrystal-doped $SiO_2$ glass thin films prepared by rf sputtering.—73-03802
Microstructure and optical properties of CdSe-microcrystal-doped $SiO_2$ glass thin films prepared by rf sputtering.—73-14227
Nonlinear switching in semiconductor (CdSSe) doped glass.—73-15062
Observation of the 1*P* excitonic states in Cd(S,Se) glass quantum dots.—73-06947
Optical bistability and nonlinear switching in CdSSe microcrystallite doped glass.—73-10463
Optical constants of vacuum-evaporated polycrystalline cadmium selenide thin films.—73-12847
Optical gain in CdSe epitaxial layers on GaAs.—73-04429
Optical properties of $CdGa_2S_{4x}Se_{4(1-x)}$ solid solutions.—73-11360
Optical properties of highly strained CdSe/ZnSe quantum wells.—73-11361
Optical spectra of ultrathin II-VI quantum wells.—73-15074
Phase studies of the Cd-Fe-Se system in the Cd-rich region.—73-05453
Photodarkening mechanism in colored filter glasses.—73-00389
Quasi-bound states in semiconductor single quantum barriers.—73-15132
Transient response of amorphous CdSe and glow-discharge amorphous Si to mode-locked laser pulses.—73-11486
Two-photon absorption coefficient spectrum in CdSSe nanocrystals by nonlinear luminescence technique.—73-07848
Unusual photoluminescence of porous CdS (CdSe) crystals.—73-11495
**cadmium sulfide,**
Analysis of photocurrent in screen-printed CdS/CdTe solar cells.—73-01074
Asymmetry of the screw dislocation core structure in cadmium sulfide crystals.—73-11075
Cathodoluminescence wavelength imaging for spatial mapping of excitons bound to dislocations and structure defects in CdS.—73-09436
Characterization of *n*-CdS/*p*-$CuGa_xIn_{1-x}Se_2$ thin-film heterojunctions.—73-11100
Continuous wave Nd:YAG laser deposition of CdS thin films.—73-11119
Dynamic spectral study of CdS in room temperature thermooptical nonlinearity.—73-11150
Effect of frit compositions on the glass transition temperature, water durability, and coloring of the CdS-CdSe pigment containing low-temperature porcelain red enamel in the system $SiO_2$-$B_2O_3$-$Na_2O$-$K_2O$-$Li_2O$-ZnO-$Al_2O_3$-$ZrO_2$-F.—73-14358
Effect of matrix glass composition on the oxidation of small-sized CdS crystal doped glasses.—73-11159
Effect of postdeposition treatments on morphology, structure, and optoelectronic properties of chemically deposited CdS thin films.—73-05765
Effects of heat treatment in $H_2$-$N_2$ atmosphere on the performance of screen-printed CdS/CdTe solar cells.—73-01139
Electromodulation spectroscopy of CdS microcrystallites embedded in polymer films.—73-04309
Emission spectra of microcrystalline CdS doped in sol-gel-derived glasses.—73-10370
Features of temperature dependence of 1*A*-exciton decay constant in CdS crystal.—73-01164
Femtosecond dephasing in $CdS_xSe_{1-x}$ mixed crystals: the role of localized biexcitons.—73-14921
Formation of CdS crystals in small-sized CdS-doped glasses prepared by the sol-gel process.—73-00630
Formation of thin CdS films by laser sputtering.—73-01168
Growth of Cd(S,Se) nanocrystals in silicate glasses: high-resolution electron microscopy and small-angle X-ray scattering.—73-00350
Influence of bath composition on the photocurrent response and morphology of chemically deposited CdS thin films.—73-07591
Influence of low-temperature annealing on the defect structure of CdS:Li crystals.—73-01206
Influence of mobile defects on the characteristics of a metal-semiconductor contact in the case of CdS crystals.—73-14983
Influence of the excess pressure of the vapors of the components on the ensemble of point defects in CdS crystals.—73-06162
Instability of the conductivity due to electric disturbance of the electron-molecular equilibrium in the surface layers of CdS films.—73-01216
Interference effects at initial stages of recrystallization under laser irradiation of cadmium sulfide films on substrates with artificial microrelief.—73-14997
Ir nonlinearity of commercial Cd(S,Se) glass composites.—73-01224
Junction formation and characteristics of CdS/$CuInSe_2$/metal interfaces.—73-05586
Luminescence properties of Yb- and Nd-implanted CdS.—73-04392
Magnetic susceptibility and Mossbauer effect in Fe-doped CdS.—73-16208
Magnetization step of isolated $Co^{2+}$ ions in hexagonal $Cd_{1-x}Co_xS$ and $Cd_{1-x}Co_xSe$.—73-15031
Magnetooptical effects in $CdS_xSe_{1-x}$ microcrystallites.—73-15032
Methods of making *pn* CdTe/CdS thin film solar cells.—73-11534
Nonlinear switching in semiconductor (CdSSe) doped glass.—73-15062
Observation of the 1*P* excitonic states in Cd(S,Se) glass quantum dots.—73-06947
Optical absorption and size effect in CdS and ZnS microcrystallites.—73-11357
Optical bistability and nonlinear switching in CdSSe microcrystallite doped glass.—73-10463
Optical properties of $CdGa_2S_{4x}Se_{4(1-x)}$ solid solutions.—73-11360
Photodarkening mechanism in colored filter glasses.—73-00389
Photoelectric properties of *n*-CdS:In-*p*-$CuInSe_2$ heterojunctions.—73-15092
Photoemission investigation of the $SnO_2$/CdS interface: a front contact interface study of CdS/CdTe solar cells.—73-02664
Photoluminescence excitation spectroscopy study of CdS nanocrystals in ormosils.—73-15096
Piezospectroscopy of screw dislocation emission in CdS.—73-17094
Polariton solitons in semiconductors.—73-15105
Polarization photosensitivity of thin-film *p*-$CuInSe_2$-*n*-CdS structures.—73-07740
Preparation and investigation of $SiO_2$ films activated by CdS semiconductor nanocrystals.—73-07744
Preparation and optical properties of CdS microcrystallites deposited in porous Vycor glass.—73-07064
Preparation and optical properties of CdS microcrystallites deposited in porous Vycor glass.—73-14468
Preparation and properties of electrodeposited ternary $CdS_xSe_{1-x}$ and $Zn_xCd_{1-x}S$ films.—73-05618
Preparation of CdS semiconductor thin films by a solution growth technique.—73-11401
Properties of CdS films prepared by the chemical mist deposition process.—73-15123
Properties of compensated lead cadmium sulfide films.—73-15124
Raman spectroscopy in $Cd_{1-x}Fe_xS$—iron energy levels and spin-flip Raman scattering.—73-08718
Reversal of magnetic anisotropy of $Cd_{1-x}Fe_xS$ at high magnetic fields.—73-07974
Semiconductor photocatalysts: X, Visible-light-induced photoreduction or aromatic ketons and electron-deficient alkenes catalyzed by quantized CdS.—73-07793
Shift of exciton resonances in the intense pulsed excitation of a CdS crystal.—73-15160
Single-wavelength pulsed optical logic based on dichroism in CdS.—73-01315
Sol-gel preparation of $CdS_xSe_{1-x}$ solid solution microcrystal-doped glasses.—73-07173
Structural, electrical, and optical properties of In-doped CdS thin films prepared by vacuum coevaporation.—73-07816
Surface recombination of nonequilibrium electron-hole plasma in laser-modified semiconductor-doped glasses.—73-15194
Time-and-spectral studies of fluctuation surface luminescence in CdS crystals.—73-16382
Transverse Faraday effect in crystal with birefringence inversion (CdS).—73-02718
Two-photon absorption coefficient spectrum in CdSSe nanocrystals by nonlinear luminescence technique.—73-07848
Unusual photoluminescence of porous CdS (CdSe) crystals.—73-11495
Vibrational mode softening in thin-film CdS.—73-01362
**cadmium telluride,**
1992 U.S. Workshop on the Physics and Chemistry of Mercury Cadmium Telluride and Other Ir Materials.—73-11351
Analysis of photocurrent in screen-printed CdS/CdTe solar cells.—73-01074
Annealing effect on the *p*-type carrier concentration in low-temperature-processed arsenic-doped HgCdTe [MCT].—73-11068
Assessment of electrical inhomogeneity of undoped and doped $Hg_{1-x}Cd_xTe$ MOVPE (IMP) [interdiffusion multilayer process] layers by variable magnetic field Hall profile measurements.—73-11074
Au interfaces with epitaxially grown CdTe(111): chemistry and barrier heights.—73-01080
Band gap uniformity and layer stability of HgTe-CdTe superlattices grown by photon-assisted molecular beam epitaxy.—73-11080
Band tails and insulator-metal transition in the persistent photoconductor $Cd_{1-x}Mn_xTe$:In.—73-01083
Band-edge magnetoreflectance and magnetization of $Cd_{1-x}Co_xTe$ [x=0.00383].—73-01084
Behavior of the absorption coefficient due to valence band transitions in CdTe in the temperature range of 5–400 K.—73-14784

Bias-switched dual-band HgCdTe infrared photodetector.—73-07391

Bulk and surface transport properties of *n*-type $Hg_{1-x}Cd_xTe$ crystals in the temperature range $0.5<T<50$ K.—73-07395

$Cd_xHg_{1-x}Te$ phonon spectra research by means of magnetophonon resonance.—73-04261

CdTe and CdMnTe quasi-phase-matched optical parametric oscillator and amplifier—[analysis].—73-11092

CdTe and HgTe surface growth kinetics for molecular and metallorganic molecular beam epitaxy.—73-11093

CdTe epitaxial growth on (211)B GaAs by molecular beam epitaxy.—73-07400

CdTe(111) growth on sapphire(0001) substrates by hot wall epitaxy.—73-07401

Chaotic spontaneous oscillations in variable-gap semiconductor structures.—73-01094

Characteristic features of magnetic-field dependences of the transport coefficients of two-layer $Cd_xHg_{1-x}Te$ structures.—73-04262

Characteristic features of the temperature and spectral dependences of the photoconductivity and photomagnetic effect in *p*-type $Cd_xHg_{1-x}Te$ at low temperatures.—73-11096

Characteristics of the tunneling across Schottky barriers made of narrow-gap semiconductor *p*-type $Hg_{1-x}Cd_xTe$.—73-01098

Characterization of $Hg_{1-x}Cd_xTe$ [MCT] heterostructures by thermoelectric measurements.—73-11102

Comparison of $In_{1-x}Tl_xSb$ [ITA] and $Hg_{1-x}Ce_xTe$ [MCT] as long-wavelength infrared materials.—73-11113

Comparison of spatial compositional uniformity and dislocation density for organometallic vapor phase epitaxial $Hg_{1-x}Cd_xTe$ grown by the direct alloy and interdiffused growth processes.—73-11115

Compensation defects in CdTe:Cl samples grown by different techniques.—73-11116

Compositional analysis of HgCdTe epitaxial layers using secondary ion mass spectrometry.—73-07419

Controlled *p*-type Sb doping in LPE-grown $Hg_{1-x}Cd_xTe$ epilayers.—73-11121

Covered electrode HgCdTe photoconductor under high illumination levels.—73-07424

Critical stress of $Hg_{1-x}Cd_xTe$ solid solutions.—73-07427

Current status of direct growth of CdTe and HgCdTe on silicon by molecular beam epitaxy.—73-07430

Dark current and noise factor of "staircase" avalanche photodiodes.—73-01118

Defect noise in reverse-biased $p$-$n^+$ junctions made of $Cd_xHg_{1-x}Te$.—73-07437

Diffusion model for indium in $Hg_{1-x}CdTe$.—73-01127

Dislocation reduction in HgCdTe on GaAs and Si.—73-07449

Distribution of Hg in $Cd_xHg_{1-x}Te$ by pulsed laser annealing.—73-14840

Dopant diffusion in HgCdTe grown by photon-assisted molecular beam epitaxy.—73-07453

Dry etching of CdTe/GaAs epilayers using $CH_4/H_2$ gas mixtures.—73-11146

Effect of dislocations on the electrical and optical properties of long-wavelength infrared HgCdTe photovoltaic detectors.—73-07462

Effect of Peierls relief on the low-temperature plasticity of pure CdTe crystals.—73-07467

Effect of substrate tilt on MOCVD growth of (100)CdTe on (100)GaAs.—73-11166

Effect of the layer composition on the band spectrum of $Cd_xHg_{1-x}Te$-$Cd_xHg_{1-x}Te$ superlattices.—73-14858

Effects of cluster ionization and acceleration on photoluminescence spectra of CdTe films grown by ionized cluster beam deposition.—73-07469

Effects of growth conditions on the composition of CVT and PVT [chemical and physical vapor transport] grown $Hg_{1-x}Cd_xTe$ epitaxial layers.—73-14862

Effects of growth rate and mercury partial pressure on twin formation in HgCdTe(111) layers grown by metallorganic chemical vapor deposition.—73-11172

Effects of heat treatment in $H_2$-$N_2$ atmosphere on the performance of screen-printed CdS/CdTe solar cells.—73-01139

Effects of mixed-valence mercury and indium on the electrical properties of $Hg_{1-x}Cd_xTe$.—73-07473

Elastic strain effect dependence on the energy band gaps and the lattice parameters in CdTe epitaxial layers on GaAs(100) substrates grown by hot-wall epitaxy.—73-04300

Electrical conductivity of tellurium-deficient cadmium telluride.—73-11179

Electrical effects of dislocations and other crystallographic defects in $Hg_{0.78}Cd_{0.22}Te$ *n*-on-*p* photodiodes.—73-13350

Electrical properties of vacuum-evaporated stoichiometric and nonstoichiometric CdTe thin films for optoelectronic applications.—73-11182

Electron microscope investigation of surface features of (100)$Cd_{1-x}Zn_xTe$ grown by metallorganic chemical vapor deposition.—73-09448

EPR study of $Mn^{2+}$ ions implanted in CdTe single crystals.—73-14892

Evidence for 1/*f* noise in diffusion current due to insulator trapping and surface recombination velocity fluctuations.—73-11200

Ex situ variable angle spectroscopic ellipsometry studies of electron cyclotron resonance etching of $Hg_{1-x}Cd_xTe$.—73-14896

Excess carrier lifetime in *p*-type HgCdTe [analyzed] using a three-level Shockley-Read model.—73-07514

Excited quantum states in CdTe-$Cd_{1-x}Mn_xTe$ multiple quantum wells and superlattices grown by pulsed laser evaporation and epitaxy.—73-07516

Exciton localization in $Cd_{1-x}Mn_xTe$ and its dependence on the strong magnetic field.—73-04339

Excitonic luminescence of CdTe and $Cd_{0.87}Zn_{0.13}$ submonolayers in ZnTe films grown by MBE.—73-11205

Excitonic quantum beats in CdTe/$Cd_{1-x}Mn_xTe$ quantum wells.—73-14900

Fabrication of *p*-*n* junctions from CdTe:In by laser annealing.—73-14906

Fast growth of $Cd_{1-x}Zn_xTe$ single crystals by physical vapor transport.—73-14917

Fast vapor growth of cadmium telluride single crystals.—73-11210

Features of vibrational spectrum rearrangement in semiconductor-semimetal CdTe-HgTe alloys. Lattice modes of Cd-Te and Hg-Te vibrations.—73-14919

Features of vibrational spectrum rearrangement in semiconductor-semimetal CdTe-HgTe alloys. Two-mode approximation.—73-14920

Femtosecond dynamics of resonantly excited RT excitons in II-III CdZnTe/ZnTe quantum wells.—73-07527

Ferroelectric properties of $Cd_{1-x}Zn_xTe$ solid solutions.—73-07889

Formation and electrical effects of process-induced dislocations in HgCdTe.—73-07533

Gas source iodine doping and characterization of molecular beam epitaxially grown CdTe.—73-07544

Generation-recombination currents in HgCdTe midwavelength infrared photodiodes.—73-07546

Giant exciton Faraday rotation in $Cd_{1-x}Mn_xTe$ mixed crystals.—73-14942

Growth and characterization of CdTe, HgTe, and HgCdTe by atomic layer epitaxy.—73-04346

Growth and characterization of CdTe-ZnTe short-period superlattices.—73-04347

Growth and characterization of hot-wall epitaxial CdTe on (111)HgCdTe and CdZnTe substrates.—73-11224

Growth by CVT [chemical vapor transport] and characterization of $Hg_{1-x}Cd_xTe$ epitaxial layers.—73-14946

Growth kinetics and properties of heteroepitaxial (Cd,Zn)Te films prepared by metallorganic molecular beam epitaxy [MOMBE].—73-11228

Growth method, composition, and defect structure dependence of mercury diffusion in $Cd_xHg_{1-x}Te$.—73-13351

Growth of (111)CdTe on GaAs/Si and Si substrates for HgCdTe epitaxy.—73-07552

Growth of uniform HgCdTe by metallorganic chemical vapor deposition system.—73-07555

Hall effect characterization of LPE HgCdTe *p*/*n* heterojunctions.—73-11238

Heavily accumulated surfaces of mercury cadmium telluride detectors: theory and experiment.—73-11240

$Hg_{0.8}Cd_{0.2}Te$ native defects: densities and dopant properties.—73-13352

HgCdTe double heterostructure diode lasers grown by molecular beam epitaxy.—73-07557

HgTe contacts to *p*-HgCdTe.—73-07558

High-spatial-resolution resistivity mapping applied to mercury cadmium telluride.—73-07565

Hydrogen-acceptor pairing in CdTe epitaxial layers grown by OMVPE.—73-04358

Implantation-enhanced interdiffusion of CdTe-ZnTe heterostructures.—73-07574

Improved CdTe layers on GaAs and Si using atomic layer epitaxy [ALE].—73-11257

Impurity structural defects in CdTe single crystals.—73-03096

In situ ellipsometric measurements of the MBE growth of CdTe/HgTe and CdTe/ZnTe superlattices.—73-11263

In situ studies of the effect of various gaseous species and ultraviolet illumination on the dark currents of HgMnCdTe and HgCdTe short-wavelength infrared diodes.—73-07585

Indium doping of HgCdTe grown by metallorganic chemical vapor deposition–direct alloy growth using triisopropylindium and diisopropyltellurium-triisopropylindium adduct.—73-11267

Indium-vacancy and indium-hydrogen interactions in $Hg_{1-x}Cd_xTe$ [MCT].—73-13353

Influence of annealing under anodic oxide on changes in the composition of the surface and conversion of the type of conduction of *p*-type $Cd_xHg_{1-x}Te$ ($x\approx0.2$) single crystals.—73-07590

Influence of compensating annealing on the 1/*f* noise in $Cd_xHg_{1-x}Te$.—73-07592

Influence of dislocations generated by laser radiation on electrophysical properties and luminescence of *p*-type CdTe.—73-01201

Influence of growth and microstructure of electrodeposited cadmium telluride films on the properties of *n*-CdS/*p*-CdTe thin-film solar cells.—73-11272

Influence of growth dislocations on the electron lifetime in *n*-type $Cd_xHg_{1-x}Te$.—73-01204

Influence of heat treatment on structure and properties of electrodeposited CdSe or Cd(Te, Se) semiconductor coatings.—73-07593

Influence of Hg pressure on diffusion coefficient of As in HgCdTe [MCT].—73-13354

Influence of resonant defect states on subband structures in $Hg_{1-x}Cd_xTe$.—73-07600

Integrated heterostructure devices based on II-VI compound semiconductors.—73-11277

Intersubband absorption in (Hg,Cd)Te quantum wells.—73-07619

Intersubband transition of CdTe/$Cd_{0.94}Zn_{0.06}Te$ strained single quantum wells grown by hot-wall epitaxy.—73-14998

Intersubband-transition studies of $Cd_{0.936}Zn_{0.064}Te$/CdTe superlattices grown by double-well temperature gradient vapor transport deposition.—73-14999

Intraband optical Stark effect in CdTe.—73-07621

Inversion of the conduction of $Cd_xHg_{1-x}Te$ films subjected to a plasma treatment.—73-15000

Ion mill damage in *n*-HgCdTe.—73-07623

Key issues in HgCdTe-based focal plane arrays: an industry perspective.—73-07627

Kinetic characteristics of the cadmium telluride single-crystal chemical polishing process in a bromine-hydrobromic acid solution.—73-15005

1/*f* noise in $Hg_{1-x}Cd_xTe$ converted from *n*- to *p*-type by narrative doping.—73-07631

Langmuir-Blodgett film as an insulator in an MIS transistor made from $Cd_xHg_{1-x}Te$.—73-07632

Large improvement in HgCdTe photovoltaic detector performances at LETI.—73-11290

Laser-induced change in the optical properties of CdTe-doped glasses.—73-15008

Low-temperature annealing of *p*-cadmium telluride in gallium bath.—73-07645

Low-temperature epitaxy of HgTe, CdTe, and HgCdTe using flow modulation techniques.—73-07646

Low-temperature magnetic properties of pure and In-doped $Cd_{0.2}Hg_{0.8}Te$ [CMT] single crystals.—73-11298

Low-temperature photoluminescence of single-crystal $Zn_xCd_{1-x}Te$ films grown by solid-phase substitution.—73-04388

Low-temperature transport properties of $Cd_{0.91}Mn_{0.09}Te$:In and evidence for a magnetic hard gap in the density of states.—73-09416

Low-threshold injection laser in HgCdTe.—73-11300

Luminescence profiling investigation of the transformation of defects in CdTe crystals by brief annealing.—73-04391

Magnetic and optical properties of $Cd_{1-x}Gd_xTe$ diluted magnetic semiconductor.—73-04395

Magnetic field dependence of polaron mass in CdTe.—73-01235

Magnetic generation of electrons and holes in semimetallic HgTe-CdTe superlattices.—73-07649

Magnetic polaron effect in diluted magnetic semiconductor $Cd_{1-x}Mn_xTe$ [$0.25<x<0.36$] with high Mn concentrations.—73-07650

Magnetic-field-induced unbinding effects in CdTe-$Cd_{1-x}Mn_xTe$ quantum wells.—73-04396

Magnetophotoluminescence of a narrow-gap semiconductor $Hg_{0.77}Cd_{0.23}Te$.—73-07656

MBE HgCdTe heterostructure *p*-on-*n* planar infrared photodiodes.—73-11306

Mechanisms of ultrasound-induced changes in electrical and photoelectric properties of single crystals of $Zn_xCd_{1-x}Te$ solid solutions.—73-01242

Mercury cadmium telluride material requirements for infrared systems.—73-07666

Mercury interstitials in $Hg_{1-x}Cd_xTe$ alloys [investigated] using resonant impact-ionization spectroscopy.—73-07667

Metal-semiconductor work function differences with HgCdTe and their effect on radiation-induced flatband voltage shifts.—73-07669

Metal/*p*-*n*-CdTe Schottky barrier solar cell: photoelectrochemical generation of a shallow *p*-type region in *n*-CdTe.—73-07670

Methods of making *pn* CdTe/CdS thin film solar cells.—73-11534

Microinhomogeneities in midwave infrared mercury cadmium telluride grown by metallorganic chemical vapor deposition–interdiffused multilayer process onto GaAs and GaAs/Si substrates.—73-07671

MOCVD-grown CdZnTe/GaAs/Si substrates for large-area HgCdTe IRFPAs.—73-11317

Modeling of in situ monitored laser reflectance during MOCVD growth of HgCdTe.—73-11318

Modulation of the reflectivity in amorphous semiconductors.—73-04410

Molecular beam epitaxy investigation of interface disorder effects in magnetic II-VI quantum wells.—73-11335

Nanometer fabrication in mercury cadmium telluride [MCT] by electron cyclotron resonance microwave plasma reactive ion etching.—73-11342

Neutron irradiation of $Cd_xHg_{1-x}Te$.—73-07691

New *n*-type doping precursor for MOCVD-IMP [interdiffusion multilayer process] growth of detector quality MCT [HgCdTe].—73-11347

Noise (1/*f*) and dark currents in midwavelength infrared PACE-I HgCdTe photodiodes.—73-07694

Nonlinear optical effects in rotationally twinned CdTe and CdMnTe crystals.—73-07696

Nonparabolicity in the conduction band of II-VI semiconductors.—73-15063

Occurrence of a miscibility gap in thin surface layers of $Hg_{1-x}Cd_xTe$.—73-07698

Optical nonlinearities of ZnCdTe at RT.—73-05602

Optical properties of CdTe: experiment and modeling.—73-08932

Optical properties of new diluted magnetic semiconductor $Cd_{1-x-y}Mn_xMg_yTe$.—73-15073

Ordered phase in (Hg, Cd)Te grown by liquid phase epitaxy on CdTe(111)B substrate.—73-08681

Orientation dependence of arsenic incorporation in metallorganic chemical vapor deposition grown HgCdTe.—73-07706

Oscillator strength study of the 2-D–3-D exciton transition in CdTe/(Cd,Mn)Te quantum wells and superlattices.—73-08942

Para-type doping of metallorganic chemical vapor deposition grown HgCdTe by arsenic and antimony.—73-07708

Parameters of the energy band structure of surface layers of zero-gap semiconductors (CdHg)Te and HgTe by the field effect method in electrolytes.—73-01271

Photoassisted organometallic vapor phase epitaxy of CdTe.—73-07713

Photoelectric properties of CdTe films subjected to laser radiation.—73-15093
Photoemission investigation of the $SuO_2$/CdS interface: a front contact interface study of CdS/CdTe solar cells.—73-02664
Photoemission spectroscopic techniques to assess physical and chemical properties of mercury cadmium telluride.—73-07720
Photoexcitation of shallow acceptors in $Cd_xHg_{1-x}Te$.—73-15094
Photoinduced excess low-frequency noise in HgCdTe photodiodes.—73-11379
Photoluminescence from heteroepitaxial (211)B CdTe grown on (211)B GaAs by molecular beam epitaxy.—73-11384
Photoluminescence of *n*-type CdTe:I grown by molecular beam epitaxy.—73-02666
Photoluminescence of epitaxial $Zn_xCd_yHg_{1-x-y}Te$ films.—73-01280
Photomagnetic effect and photoconductivity of thin epitaxial $Cd_xHg_{1-x}Te$/CdTe films.—73-11389
Picosecond dynamics of absorption bleaching in polycrystalline ZnCdTe films.—73-11394
Picosecond investigation of photorefractive and free carrier gratings in GaAs:EL2 and CdTe:V.—73-07735
Point defects and defect-impurity interaction in $Cd_xHg_{1-x}Te$ and other II-VI semiconductors: facts and conjectures.—73-07739
Pressure dependence of the luminescence of $Cd_xHg_{1-x}Te$/CdTe heterostructures.—73-15116
Problem of the intrinsic carrier density in $Cd_xHg_{1-x}Te$ solid solutions.—73-01289
Process modeling of point defect effects in $Hg_{1-x}Cd_xTe$.—73-13365
Properties of $n^+p$ junctions made of $Cd_xHg_{1-x}Te$ subjected to local deformation.—73-04454
Properties of (211)B HgCd-CdTe superlattices grown by photon-assisted molecular beam epitaxy.—73-07746
Properties of CdTe/InSb heterostructures grown by temperature gradient vapor transport deposition.—73-04455
Properties of CdZnTe crystals grown by a high-pressure Bridgman method.—73-07747
Quantum Hall effect and setback modulation doping in HgTe-CdTe heterostructures.—73-07754
Quantum well width dependence of exciton-phonon interaction in $Cd_{0.33}Zn_{0.67}Te$/ZnTe single quantum wells.—73-07756
Radiation swelling and sputtering of $Cd_xHg_{1-x}Te$ as a result of a large-dose ion implantation.—73-15134
Raman scattering study of CdTe/*p*(111)InSb heterointerfaces grown by rf sputtering in high vacuum.—73-04460
Real-time control of the molecular beam epitaxial growth of CdHgTe and CdTe/HgTe superlattices using ellipsometry.—73-07764
Real-time monitoring and control during MOVPE growth of CdTe using multiwavelength ellipsometry.—73-15839
Recipe to minimize Te precipitation in CdTe and (Cd, Zn)Te crystals.—73-07765
Recombination mechanisms and transport phenomena in uniaxially compressed $Cd_xHg_{1-x}Te$.—73-11415
Reduced metal-insulator semiconductor tunneling in metallorganic chemical vapor deposition HgCdTe(111)Te films.—73-07766
Relations between structure and photoelectric properties of CdTe films with anomalous impurity photovoltage.—73-16585
Relaxation processes and in-plane electron mobility limited by interface defects in CdTe-$Cd_{1-x}M_xTe$ quantum wells.—73-04468
Resonance Raman scattering in Cd/Te/CdMnTe superlattice under magnetic field.—73-04470
Role of the insulator in determining $1/f$ noise in $Hg_{1-x}Cd_xTe$ integrating MIS devices.—73-11426
Selected-area epitaxy of CdTe.—73-07790
Self-recovery of implanted semiconductors.—73-11442
Solid-phase laser doping of $Cd_xHg_{1-x}Te$ single crystals.—73-04484
Space-charge-field feedback effect on carrier transport in photorefractive CdTe:V.—73-09422
Spatial nonuniformity in Cd-annealed CdTe crystals.—73-11449
Spectral dependence of the photoconductivity and photomagnetic effect in epitaxial $Cd_xHg_{1-x}Te$/CdTe films with an anodically oxidized free surface.—73-01317
Spin-flip Raman scattering from electrons bound to donors in both wells and barriers of CdTe/$Cd_{0.3}Mn_{0.7}Te$ heterostructures.—73-05485
Stability of single free particles against spatial localization through magnetic polaron formation.—73-05489
Stress confined in the barriers of type-III HgTe/CdTe superlattices.—73-11457
Structural and optical properties of $CdIn_2Te_4$ films on *p*-InSb(111) grown by temperature gradient vapor transport deposition.—73-01322
Structural and optical studies of oxygenated amorphous CdTe films.—73-15183
Structural properties and low-temperature photoluminescence of cadmium telluride films produced by liquid phase epitaxy.—73-05646
Structure and optical characterization of $Zn_xCd_{1-x}Te$ thin films prepared by the close-spaced vapor transport method.—73-01324
Structure of CdTe(111)B grown by MBE on misoriented Si(001).—73-11461
Substrate heating effect on the growth of a CdTe film on an InSb substrate by vacuum evaporation.—73-01330
Substrate issues for the growth of mercury cadmium telluride.—73-11464
Surface effects on the properties of cadmium selenide quantum dots.—73-04492
Surface morphology study on CdZnTe single crystals by atomic force microscopy.—73-11467
Synchrotron white beam X-ray topography [SWBXT] analysis of MBE-grown CdTe/CdTe(111)B.—73-11471
Tails of the density of states in $Zn_xCd_yHg_{1-x-y}Te$ solid solutions.—73-15198
Temperature dependence of Auger lifetime in heavily doped $Hg_{1-x}Cd_xTe$.—73-11475
Temperature dependence of the absorptive edge in CdTe:O amorphous thin films.—73-02701
Temperature dependence of the relaxation time of the photoconductivity of *n*-type $Cd_xHg_{1-x}Te$ in a microwave field.—73-07830
Thermodynamic description of metal Hg(Cd)Te systems.—73-08778
Thermomigration of Te precipitates and improvement of (Cd, Zn)Te substrate characteristics for the fabrication of LWIR [long-wavelength infrared] (Hg, Cd)Te photodiodes.—73-11482
Time-resolved photoluminescence studies of perpendicular transport in CdTe/$Cd_{1-x}Mn_xTe$ short-period superlattices.—73-11484
$TiN_xO_y$ transparent electrode material for HgCdTe infrared devices.—73-07370
Transformation of the crystal structure of $Cd_xHg_{1-x}Te$ due to ion implantation.—73-11485
Transient photoconductivity in CdTe films grown by the hot wall flash evaporation technique.—73-04501
Transient photocurrents in CdTe and CdTe:O sputtered films.—73-15214
Tunneling and $1/f$ noise currents in HgCdTe photodiodes.—73-07844
Two-dimensional exciton magnetic polaron in CdTe/$Cd_{1-x}Mn_xTe$ quantum-well structures.—73-07846
Ultrahigh vacuum atomic layer epitaxy of CdTe.—73-04503
Use of ellipsometry to characterize the surface of HgCdTe.—73-11496
Uv photon-assisted control of interface charge between CdTe substrates and metallorganic chemical vapor deposition CdTe epilayers.—73-11497
Vapor phase equilibria in the $Cd_{1-x}Zn_xTe$ alloy system.—73-12729
X-ray absorption near-edge structure analysis of CdFeTe: XANES experiment and theoretical LMTO calculations.—73-01365
X-ray characterization of (Zn, Cd)Te/CdTe strained layer superlattices.—73-01366
X-ray diffraction characterization of LPE HgCdTe heterojunction photodiode material.—73-11509
X-ray diffraction study of the interfaces between $Hg_{1-x}Cd_xTe$ crystals and anodic films.—73-15230

**cadmium,**
Absorption edge structure of cubic cadmium and zinc chalcogenides.—73-14764
Anisotropy of surface energy of monocrystals of cadmium diarsenide.—73-10917
Cadmium-containing fluoride glasses.—73-06886
Closed-ampoule diffusion of sulfur into Cd-doped InP substrates: dependence of S profiles on diffusion temperature and time.—73-07415
Crystal structure of $Rb_4CdBr_6$ and $Rb_4CdCl_6$.—73-16093
Diffusion and clustering in the $Cd_{1-x}Bi_xF_{2+x}$ solid solution: a fluorine NMR study.—73-03090
Effect of irradiation on the luminescence of $CdP_2$ crystals.—73-14851
Electron and hole energy spectrum parameters of cubic cadmium and zinc chalcogenides.—73-14878
Electronic conductivity and chemical diffusion coefficient of cadmium-doped cuprous iodide.—73-03093
Improper ferroelectric phase transition in cadmium pyroniobate.—73-15268
Influence of the absorption edge on dispersion nonlinearity of $CdS_xSe_{1-x}$ microcrystals in glasses and its appearance in self-diffraction experiments.—73-14986
Isostructural phase transition in semiconducting $CdIn_2S_4$ spinel.—73-15003
Lattice reflection spectrum of $Cd_{1-x}Hg_xTe$ alloys [0≤*x*≤0.8].—73-15012
Luminescence of the cadmium oxyfluoromolybdate, $CdMoO_3F_2$.—73-08906
Natural aging changes in galvanomagnetic properties of undoped CdSb.—73-11343
Nature of paramagnetic centers in cadmium borate glasses.—73-00378
Nature of paramagnetic centers in cadmium borate glasses.—73-00379
Obtaining meta- and pyrovanadates of cadmium from an unusual low energy process: II, Pyrovanadate.—73-02364
Obtaining meta- and pyrovanadates of cadmium from an unusual low-energy process: I, α-metavanadate.—73-02365
Optical properties of transparent and conductive $Cd_2SnO_4$ films.—73-08934
Oriented films of semiconductor compounds $Zn_3As_2$ and $Cd_3As_2$ on sapphire substrates.—73-15080
Phase equilibria in the system Cd-Si-Se and the properties of the compound $Cd_4SiSe_6$.—73-02379
Phase transition and optical properties of thin films of $Ag_2CdI_4$ superionics.—73-02390
Properties of mixed cadmium halide glasses.—73-14260
Rare-earth-doped, stabilized cadmium halide glasses.—73-00761
Rearrangement of vibrational spectra of $Cd_{1-x}Zn_xTe$ semiconductor alloys [0≤*x*≤0.5].—73-15141
Size-quantized semiconductor cadmium chalcogenide particles in Langmuir-Blodgett films.—73-07801
States of admixed iron atoms in glasses of the system $CdGeO_3$-$CdF_2$-$AlF_3$ according to data from Mossbauer spectroscopy.—73-00403
Static and dynamic characteristics of bulk and contact electrical resistivity in $CdCr_2Se_4$ under stochastic current instability.—73-15176
Structure formation in Cd chalcogenide films produced from atomic-molecular beams.—73-15187
Structures and crystal chemistry of magnesium chloride and cadmium chloride.—73-02469
Synthesis and unit cell data of a new cadmium antimonate electronic ceramic.—73-08766
Tensimetric determination of the limits of the homogeneity region of the compound $Cd_4GeS_6$.—73-03207
Thermal stability and microstructure of new laser matrix cadmium-zinc glasses.—73-00563

**calcia,**
$(Pb,Ca)[(Mn_{0.5}W_{0.5})Ti]O_3$ ceramics: X-ray and dielectric studies.—73-08946
Alumina, calcia, yttria sealing composition.—73-13913
Calculation of the $CaO$-$SiO_2$-$Me_xO_y$ system viscosity.—73-02554
CaO clinker with improved antihydration property.—73-00782
Compressibility and sintering of aggregated MgO-CaO powder and the influences of adhesion of fine particles to the surface of aggregate.—73-16683
Effect of fluorine on phase separation of $CaO$-$Al_2O_3$-$SiO_2$ glass.—73-13966
Effect of storage conditions on handling and $SO_2$ reactivity of $Ca(OH)_2$-based sorbents.—73-00078
Effects of CaO impurity on microstructural evolution during sintering of alumina.—73-02805
Effects of synthesis by melting in solar and radiation furnaces on changes in phase composition in the systems $ZrO_2$-$Ge_2O_3$-CaO(MgO).—73-02249
Formation of $CaO$-$10Al_2O_3$ with the β-alumina-type structure by means of ion exchange.—73-02277
High-temperature stability of $Ca_2ZrSi_4O_{12}$.—73-16169
Low-temperature degradation behavior for CaO-doped 2.5Y-TZP ceramics.—73-02323
Network structure of rf-sputtered amorphous $AlPO_4$-MgO and $AlPO_4$-CaO films.—73-05439
Neutral, ultraviolet-absorbing, fixed tint lenses.—73-03955
Permeability of molten Cu or Ni into the calcium oxide refractory.—73-10753
Phase equilibria and crystal chemistry in portions of the system SrO-CaO-1/2$Bi_2O_3$-CuO: V, The system SrO-CaO-1/2$Bi_2O_3$.—73-16248
Phase equilibria in the CaO-$Me_2O_3$-$CaCl_2$-$H_2O$ system.—73-02378
Phase identification in calcia–alumina fibers crystallized from amorphous precursors.—73-02384
Phase relations in the system CaO-$B_2O_3$-$SiO_2$.—73-08695
Phase transition and oxygen deficiency in electrochemically reduced $Y^+$, Ca-PSZ crystals.—73-05455
Process for producing silicon carbide platelets.—73-05329
Properties of CaO-rich gunning material for converter.—73-00843
Role of CaO in the sintering of 12Ce-TZP ceramics.—73-06024
Sintering of high-purity magnesite and influence of CaO.—73-13266
Structure and properties of low-CaO contained clinker.—73-10168
Subsolidus relations in the $La_2O_3$-CuO-CaO phase diagram and the $La_2O_3$-CuO binary join.—73-16342
System CaO-SrO-CuO.—73-16358
Thermodynamic investigation of the $CaO$-$Al_2O_3$-$CaSO_4$-$H_2O$ system at 50°C and 85°C.—73-10181
Thermodynamic investigation of the $CaO$-$Al_2O_3$-$CaSO_4$-$K_2O$-$H_2O$ system at 25°C.—73-16376
Use in the glass industry of some chemical industry byproducts containing $Na_2O$ and CaO.—73-14524
XPS measurements on glass surfaces.—73-00429
Zirconia-modified calcium oxide ceramics and industrial recommendations.—73-12906

**calciners/calcination,**
Activators for accelerated calcination.—73-09804
Effect of calcination on characteristics and sintering behavior of $Al_2O_3$-$ZrO_2$ composite powders.—73-05755
Effect of calcination on the sintering of gel-derived, zirconia-toughened alumina.—73-16724
Flash calcines of kaolinite: kinetics of isothermal dehydroxylation of partially dehydroxylated flash calcines and of flash calcination itself.—73-12803
Gypsum calcination in superheated steam—a new process with lower energy demand and better product quality.—73-09979
Influence of the fineness of calcined kaolin on the sintering of electrical ceramic bodies based on Angrensk kaolins.—73-02873
Operating experience with the calcination of natural gypsum and desulfogypsum in a grinding and calcining plant.—73-00153
Stabilized tetragonal zirconium oxide as a support for catalysts: evolution of the texture and structure on calcination in static air.—73-02444
Structural changes during the calcination of raw coke.—73-12695
Use of RSP [reinforced suspension preheater] calciners in Sweden's largest rotary kiln plant at the Slite cement works.—73-03553

**calcite,**
Cleavage cracks in iceland spar.—73-17117
Crystal growth diagrams as an aid to interpreting the fabrics of calcite aggregates.—73-12558
Hydrothermal growth of calcite single crystals in nitrate solutions.—73-05850
Measurement of calcite growth rate in seeding continuously stirred tank crystallizer.—73-13749
Morphology, relationship, and origin of fiber and dendrite calcite crystals.—73-15908

Ordering of manganese ions in calcite structure.—73-08682
Sharp crack self-healing in $CaCO_3$.—73-02686
Zonation and geochemical patterns of buried calcite cements: Upper Smackover Formation, Clarke County, Mississippi.—73-15917

**calcium aluminate,**
Binder distribution in macro-defect-free [MDF] cements: relation between percolative properties and moisture absorption kinetics.—73-03437
$Ca_2AlMnO_5$: studies about its characterization and hydration.—73-13684
Calcium aluminate cements.—73-12263
Chemical synthesis and characterization of calcium aluminate powders—correction.—73-12942
Chemical synthesis and characterization of calcium aluminate powders.—73-05705
Early hydration of tricalcium aluminate-gypsum mixtures in the presence of sulfonated melamine formaldehyde superplasticizer.—73-00067
Effect of mixing water on morphology of $C_3A$ hydrates.—73-09912
Examination of $12CaO{\cdot}7Al_2O_3$ phase doped with magnesium, iron, and titanium oxides.—73-16144
High-resolution transmission electron microscopy study of microstructures of initially hydrated calcium aluminosulfate.—73-00101
Hydration kinetics of calcium aluminate phases in the presence of various ratios of $Ca^{2+}$ and $SO_4^{2-}$ ions in the liquid phase.—73-00102
Hydration of $4CaO{\cdot}Al_2O_3{\cdot}Mn_2O_3$ in the absence and the presence of gypsum—a comparative study with the hydration of $4CaO{\cdot}Al_2O_3{\cdot}Fe_2O_3$.—73-03478
Hydration of amorphous $12CaO{\cdot}7Al_2O_3$ [$C_{12}A_7$] coated with $SiO_2$.—73-13730
Hydration of $C_3A$ in the presence of additives replacing the effects of gypsum.—73-09988
Hydration of $C_3A$ in the presence of $Ca(OH)_2$, $CaSO_4{\cdot}2H_2O$, and $CaCO_3$.—73-00105
Hydration of calcium dialuminate and its mixtures containing slags.—73-09989
Identification of hydration reactions through stress induced by volume change: II, $C_4AF$ systems.—73-03481
Identification of hydration reactions through stresses induced by volume change: I, $C_3A$ systems.—73-00108
Influence of alumina on the hydration of monocalcium aluminate at different temperatures.—73-13737
Kinetics of tricalcium aluminate and tetracalcium aluminoferrite hydration in the presence of calcium sulfate.—73-00130
New approach to the preparation of ir transparent $Ca_{12}Al_{14}O_{33}$ material.—73-09222
Phosphate-bonded calcium aluminate cements.—73-00207
Preparation and properties of calcium aluminate compositions via sol-gel processing: effects of precursors.—73-14469
Properties of some blended high-alumina cements.—73-10114
Proton NMR relaxation study of calcium aluminate [CA] hydration reactions.—73-03523
Rapid conversion of calcium aluminate cement hydates, as revealed by synchrotron energy-dispersive diffraction.—73-10126
Retardation of calcium silicate and calcium aluminate hydration at 150°C, 86.2 MPa.—73-03530
Sintering study of calcium aluminate-II.—73-13269
Solubility properties of ternary and quaternary compounds in the $CaO{\cdot}Al_2O_3{\cdot}SO_3{\cdot}H_2O$ system.—73-00190
Stability of calcium sulfoaluminate hydrates in water solutions with various pH values.—73-00192
Structure and dynamics in calcium aluminate liquids: high-temperature $^{27}Al$ NMR and Raman spectroscopy.—73-12702
Synthesis and characteristics of fibrous $3CaO{\cdot}Al_2O_3{\cdot}3CaCO_3{\cdot}32H_2O$.—73-13291
Thermodynamic investigation of the $CaO{\cdot}Al_2O_3{\cdot}CaSO_4{\cdot}H_2O$ system at 25°C and the influence of $Na_2O$.—73-03546

**calcium fluoride,**
$CaF_2$ growth on Si, a-$SiO_2$ [studied] by in situ spectroscopic ellipsometry.—73-17111
$CaF_2$/Si interface using X-ray photoelectron spectroscopy.—73-09434
Characterization of $Ca_{1-x}Er_xFe_{2+x}$ solid solution thin films grown on Si(100) substrates.—73-03123
Effect of the $Er^{3+}$ concentration on the luminescence of $Ca_{1-x}Er_xF_{2+x}$ thin films epitaxially grown on Si(100).—73-04292
Effects of clinkering temperature and silicate phase on the hydration of $C_{11}A_7{\cdot}CaF_2$.—73-09931
Electrical conduction in $CaF_2$ and $CaF_2$-$Al_2O_3$ nanocomposite films on $Al_2O_3$ substrates.—73-07313
Electrical relaxation of dimers in rare-earth-doped calcium fluoride.—73-05388
Epitaxial bilayer growth of $CaF_2$(111)/Pd(111) on $CaF_2$(111) substrates.—73-08530
Initial formation of the $CaF_2$ interface: a theoretical study.—73-02623
Ion conductivity of solid solutions $Ca_{1-x}Th_xF_{2+2x}$ and $Ca_{1-x}U_xF_{2+2x}$.—73-00982
Mechanism of slow excitation in X-ray luminescence and thermoluminescence of $CaF_2$:Tm crystals.—73-08916
Optical and structural properties of $CaF_2$:Nd films on Si-based substrates.—73-04426
Structural study on fluorine-doped Bi(Pb)-Sr-Ca-Cu-O superconductors.—73-11906
Synthesis and ionic conductivity of nanophase $Ca_{1-x}La_xF_{2+x}$.—73-04176
Thermodynamic calculation of phase equilibria in the $CaF_2$-$SiO_2$-CaO system.—73-05515

**calcium phosphate,**
$^{31}P$ MAS-NMR spectroscopy of calcium phosphate glasses.—73-10391
Antibacterial calcium phosphate ceramic.—73-05189
Bone induction method.—73-12341
$Ca(H_2PO_4)_2{\cdot}H_2O$ dehydration under equilibrium conditions.—73-16039
Calcium phosphate ceramics as biomaterials.—73-12316
Calcium phosphate type glass-ceramic.—73-00727
Clinical applications of calcium phosphate biomaterials: a review.—73-08507
Coated refractory composition and method for making the same.—73-00886
Controlling stage of the calcium phosphate (tertiary) with natural gas reduction process.—73-16069
Development of chemically bonded ceramics in the $CaO$-$SiO_2$-$P_2O_5$-$H_2O$ system.—73-00060
Development of self-setting calcium phosphate cements.—73-00062
Dynamic fatigue of beta tricalcium phosphate bioceramics.—73-09572
Formation of porous calcium phosphate films on titanium oxide substrate by spray pyrolysis technique.—73-13065
Hardening material for medical and dental use.—73-02042
Hydration of tetracalcium phosphate.—73-06667
Hydration properties of α-tricalcium phosphate in tris solution.—73-16512
Improvement of chemical and mechanical properties of unidirectionally crystallized calcium phosphate glass-ceramics by reaction with ammonia gas.—73-14204
Influence of octacalcium phosphate [OCP] addition on hydraulic properties of apatitic cement.—73-13739
Kinetics of $Ca(H_2PO_4)_2{\cdot}H_2O$ thermal dissociation.—73-16191
Medical applications of calcium phosphate bioceramics.—73-02015
Medical or dental hardening compositions.—73-10639
Microwave sintering of calcium strontium zirconium phosphate [CSZP] ceramics.—73-05922
Preparation of calcium phosphate fibers for applications to biomedical fields.—73-02947
Preparation of calcium phosphate fibers for applications to biomedical fields.—73-10577
Process for producing shaped article of oriented calcium phosphate type compound.—73-02063
Properties of apatite cement composed of α-tricalcium phosphate and tetracalcium phosphate.—73-10106
Properties of calcium metaphosphate and calcium diphosphate powders prepared by spray pyrolysis technique.—73-00172
Resorbable bioactive phosphate-containing cements.—73-05243
Sinterability of ß-calcium orthophosphate powder prepared by spray pyrolysis.—73-06049
Sintering and properties of $CaTi_4(PO_4)_6$ [CTP] prepared by sol-gel process.—73-03006
Sintering behavior and mechanical properties of hydroxyapatite and dicalcium phosphate [DCP].—73-06052
Synthesis and thermal changes of calcium phenylphosphate and calcium phenylphosphate.—73-13301
Synthesis and thermal changes of calcium phenylphosphate and calcium phenylphosphonate.—73-05507
Synthesis of ultrafine calcium phosphate powders from $Ca(OH)_2$ suspension and various phosphoric aqueous solutions.—73-03058
System $YPO_4$-$Ca_3(PO_4)_2$-$Ca_2P_2O_7$.—73-02512
Thermal behavior of octacalcium phosphate intercalated with ß-dihydromuconate.—73-05653
Thermal behavior of octacalcium phosphate intercalated with ß-dihydromuconate.—73-12889
Thermodissociation and reduction of calcium phosphates in presence of silica.—73-16374

**calcium silicate hydrate,**
$^{17}O$ and $^{29}Si$ MAS NMR study of ß-$C_2S$ [dicalcium silicate] hydration and the structure of calcium-silicate hydrates.—73-13758
$^{29}Si$ NMR spectroscopy of silicate anions in hydrothermally formed CSH.—73-05477
$^{29}Si$ NMR study of the thermal decomposition of hydrothermally formed hillebrandite and xonotlite.—73-05478
Application of selective $^{29}Si$ isotopic enrichment to studies of the structure of calcium silicate hydrate (CSH) gels.—73-05358
Calcium silicate hydrates as clay substitute in porcelain enamel suspensions.—73-10200
Characterization of CSH from highly reactive ß-dicalcium silicate prepared from hillebrandite.—73-08567
Compositional and molecular character of the calcium silicate hydrates formed in the paste hydration of $3CaO{\cdot}SiO_2$.—73-06639
Effect of combined additions of silica fume, calcium sulfoaluminate, and gypsum on the hydration and strength development of $Ca_2SiO_4$.—73-09900
Effect of heat treatment on inner product CSH.—73-09908
Incorporation of minor and trace elements into calcium silicate hydrate (CSH) gel in hardened cement paste.—73-03482
Interpretation of compositional patterns found by quantitative energy dispersive X-ray analysis for cement paste constituents.—73-10019
Models for the composition and structure of calcium silicate hydrate (CSH) gel in hardened tricalcium silicate pastes.—73-10056
Properties of autoclaved calcium silicate materials using waste tile: influence of $SiO_2$ sources.—73-10107
Thermal decomposition of tricalcium silicate hydrate.—73-16372

**calcium silicate,**
$^{29}Si$ solid-state NMR study of tricalcium silicate and cement hydration at high temperature.—73-13776
Bioactivity of $Fe_2O_3$-containing $CaO$-$SiO_2$ glasses: in vitro evaluation.—73-14136
$CaSiO_3$ as a substrate material for Ba-Y-Cu-O superconducting oxide films.—73-01499
$CaSiO_3$ as a substrate material for Ba-Y-Cu-O superconducting oxide films.—73-11698
Cement-containing ceramic articles and method for production thereof.—73-12344
Characterization of CSH from highly reactive ß-dicalcium silicate prepared from hillebrandite.—73-08567
Comparison between the hydration processes of tricalcium silicate and beta-dicalcium silicate.—73-00046
Crystal structure and hydration reactivity of ß-$Ca_2SiO_4$ solid solutions.—73-09877
Dehydration processes of gyrolite.—73-16104
Development of chemically bonded ceramics in the $CaO$-$SiO_2$-$P_2O_5$-$H_2O$ system.—73-00060
Effect of calcium fluorosulfosilicate on formation of calcium silicate.—73-09899
Effect of sulfate on the reaction of $3CaO{\cdot}SiO_2$ formation in presence of clinker melt and its appearance in clinker.—73-06650
Effect of sulfate on the reaction of $C_3S$ [tricalcium silicate] formation.—73-09919
Effects of $K_2SO_4$ and $NaSO_4$ on $3CaO{\cdot}SiO_2$ formation and its microstructure.—73-13712
Efficient insulation of oil refinery vessel and piping utilizing calcium silicate.—73-07210
Electromelting mullite ceramics with added $Ca_2SiO_4$.—73-16759
EPR investigation of chromium ions in $Ca_2SiO_4$-$Cr_2O_3$ and $Ca_3Si_2O_7$-$Cr_2O_3$ solid solutions.—73-16139
Fine texture and hydration reactivity of ß-$Ca_2SiO_4$ solid solutions.—73-09962
Formation and solid-state properties of ß-dicalcium silicate.—73-09967
Formation of bonds in tricalcium silicate pastes as observed by scanning electron microscopy.—73-03470
Formation of $C_3S$ [tricalcium silicate] in the mixtures containing different silicate raw materials.—73-09968
Formation processes of ß-$C_2S$ by the decomposition of hydrothermally prepared CSH with $Ca(OH)_2$.—73-08629
Hydration of highly reactive ß-$C_2S$ prepared from hillebrandite.—73-09991
Hydrothermal reactions in the system $3CaO{\cdot}SiO_2$-$CaSO_4{\cdot}2H_2O$-$H_2O$.—73-12598
Hydrothermal synthesis of hillebrandite and thermal decomposition to highly reactive ß-$C_2S$.—73-09993
Influence of $F^-$ [fluoride] on crystalline structure of $C_3S$ [tricalcium silicate].—73-10001
Lithium as intensifier in the formation of dicalcium silicate phase.—73-10028
Metal corrosion caused by thermal insulating calcium silicate products and corrosion prevention measures.—73-10742
Model for the variations in solution chemistry during tricalcium silicate hydration.—73-10055
Molten steel pouring nozzle.—73-00888
Preparation and properties of calcium hydrosilicate, intended for use as protective coating.—73-06698
Preparation of $CaSiO_3$ powders by coprecipitation method and their sinterability.—73-02949
Proton high-resolution solid-state NMR study of $C_3S$ [tricalcium silicate] hydration.—73-03522
Reaction sintering of $Ca_2SiO_4$-$CaZrO_3$ composites.—73-13230
Retardation of calcium silicate and calcium aluminate hydration at 150°C, 86.2 MPa.—73-03530
Role of manganese on the kinetics of formation and hydration of $C_3S$ phase.—73-10142
Semidry pressing process for calcium silicate bricks.—73-10147
Structure and microtexture changes in phosphorous-bearing $Ca_2SiO_4$ solid solutions.—73-16331
Structure of fully hydrated portland cement and tricalcium silicate pastes: III. Specific surface area and permeability.—73-00195
Synthesis of ß-$Ca_2SiO_4$.—73-17026
Very early hydration of dicalcium silicate polymorphs.—73-00205

**calcium titanate,**
Modified lead calcium titanate ceramics with a relatively large dielectric constant for hydrophone applications.—73-04561
Reaction kinetics and grain growth behavior in $BaTiO_3$-$SrTiO_3$-$CaTiO_3$ ceramics.—73-17189

**calcium,**
$^{27}Al$ NMR spectroscopy of $CaO$-$Al_2O_3$-$SiO_2$ melts and glasses.—73-13923
Beneficiation of calcium borate minerals.—73-01847
Calcium concentration dependence of the intergranular film thickness in silicon nitride.—73-09435
Calcium hydroxide [CH] deposition in the near interfacial zone in plain concrete.—73-03438
$Ce^{3+}$ centers in $Y_3Al_5O_{12}$ (YAG) single crystals: II.—73-08558
Computation of antiferromagnetic properties of orthorhombic $CaCuO_2$.—73-07420
Control of crystal shape and modification of calcium carbonate prepared by precipitation from calcium hydrogen carbonate solution.—73-02754
Control of crystal shape and modification of calcium carbonate prepared by precipitation from calcium hydrogen carbonate solution.—73-12955
Critical carrier density and revival of superconductivity in Ca-substituted $YSrBaCu_{2.6}M_{0.4}O_{6+x}$ (M=Al, Fe).—73-08010
Crystal and magnetic structures of $Ca_2Cr_{0.5}Fe_{1.5}O_5$ at 2.1 K.—73-02174
Crystal structure of aluminum-calcium ferrite phase with variable composition of $CaFe_3AlO_7$ type.—73-02188
Crystal structure of basic calcium carbonate [BCC] and its decomposition process in water.—73-16082

Crystal structure of $Ca_{1-x}Nd_xF_{2+x}$ (x=0.1, 0.2) from precision X-ray diffraction data.—73-02191
Crystallization of $CaCO_3$ from $Ca(NO_3)_2$ solution: I, Reaction conditions and morphology of $CaCO_3$.—73-09878
Decalcification studies on avian eggshell.—73-05727
Defect structure, nonstoichiometry, and phase stability of Ca-doped $YCrO_3$.—73-03085
Dielectric properties and microstructural behavior of B-site calcium-doped barium titanate ceramics.—73-02570
Dissolution kinetics of $CaCO_3$ in common laboratory solvents.—73-12133
Dissolution of calcium carbonate crystals: a constant-composition kinetics study.—73-16111
Effect of the addition of $TiO_2$ and $ZrO_2$ on the crystallization of calcium aluminosilicate glasses.—73-14362
Electronic structure of $Ca_3AuN$.—73-16133
Evidence for oxygen nonstoichiometry in a stabilized Bi-Ca-Pb-O fluorite-type phase.—73-08621
FTIR investigations of the crystallization of ir-transmitting glasses: application to calcium gallate glass.—73-10377
Hydration of tricalcium germanate.—73-09462
Influence of Ca on superconductivity of $(Y_{1-x}Pr_x)Ba_2Cu_3O_{6.95}$ system.—73-11801
Influence of Ca on the irreversibility line of $YSr_2Cu_{2.67}Tl_{0.33}O_{6+z}$.—73-11802
Localization of carriers of Y-doped $CaCuO_2$ films prepared by an organometallic chemical vapor deposition method.—73-15535
Mathematical description of hydrogen partial pressure effect on the kinetics of reduction of phosphogypsum to calcium sulfide.—73-10033
Mechanical properties and microstructure of $Ca_2SiO_4$-$CaZrO_3$ composites.—73-06244
Mechanochemical oxidation of calcium phosphide traces by combined and free oxygen in electrothermophosphorus slag.—73-16863
Metal-insulator transition with oxygen content in $CaVO_{3-y}$.—73-05596
Nitridation of calcium-stabilized zirconia.—73-08926
Oxidation of $TiB_2$-$CaB_6$ composite material.—73-13486
Perturbed-angular-correlation spectroscopy: evidence for probe-dopant interactions in Ca-doped barium titanate.—73-12648
Phase changes and thermodynamic properties of $CaTiO_3$. Spectroscopic data, vibrational modeling, and some insights on the properties of $MgSiO_3$ perovskite.—73-08691
Phase transitions in perovskite $La_{1-x}Ca_xMnO_3$.—73-08697
Polymorphism of calcium titanate.—73-02395
Polysomatism and structural models of Ca silicates.—73-02397
Preparation of (Ca, Sr)$CuO_2$ under various oxygen partial pressures and substitution of elements.—73-15592
Preparation of a calcium-substituted copper-rich yttrium barium copper oxide superconductor from a spray-dried nitrate precursor.—73-08175
Preparation of high-strength calcium-mica-containing machinable glass-ceramics.—73-00684
Preparation of tazheranite powders by solid phase reaction and conductivity of sintered bodies.—73-02972
Preparation of $Y_{1-x}Ca_xBa_2Cu_4O_8$ ($0 \le x \le 0.1$) superconductor films by the dipping-pyrolysis process.—73-04789
Properties of $CaCl_2$ hydrate with an inorganic powder: I, Electrical conductivity of $CaCl_2 \cdot nH_2O$ ($n$=6–7.35) with $\alpha$-$Al_2O_3$ powder.—73-12867
Properties of calcium-added fly ashes.—73-08499
Proton conduction in sintered oxides based on $CaZrO_3$.—73-04154
PTCR characteristics of semiconducting (Ba, Ca)$TiO_3$ ceramics fired in reducing-reoxidizing atmospheres.—73-15127
Pyrolysis mechanism of basic calcium carbonate.—73-08714
Pyrolysis mechanism of basic calcium carbonate.—73-16282
Quick setting and hardening mechanism of $C_4A_3(SO_4)$.—73-10123
Reactions of cesium with dehydrated calcium zeolite A: crystal structures of $Cs_6Ca_3$-A, $Cs_{11}Ca_{0.5}$-A·0.5Cs, and $Cs_{12}$-A·0.5Cs.—73-12672
Scattering-loss mechanism in $CaF_2$-film-assisted diffusion bonding of $MgF_2$ ceramics.—73-08966
Superconductivity of $Y_{1-x}Ca_xBa_2Cu_4O_{8+y}$.—73-08231
Synthesis and characteristics of fibrous $3CaO \cdot Al_2O_3 \cdot 32CaCO_3 \cdot 3H_2O$.—73-03036
Synthesis of a new compound, $Ca_{0.8}Ce_{1.2}Sn_2O_7$, with pyrochlore structure.—73-03040
Synthesis of amorphous calcium carbonate and its crystallization.—73-17031
Thermodynamics and phase equilibria in the Ca-Cu-O system.—73-05517
Thermomechanical fatigue [TMF] behavior of a silicon carbide fiber-reinforced calcium aluminosilicate composite.—73-03368
Transport properties near superconducting-nonsuperconducting phase boundary in $CaLaBaCu_3O_y$.—73-15660
Vaterite (an uncommon polymorph of $CaCO_3$): occurrence in boreholes demonstrate unexpected longevity.—73-15916
X-ray powder diffraction study of $CaTiO_3$ perovskite at high temperatures.—73-08794
XPS study on the carbonation process of $Ca(OH)_2$.—73-16400
XRD, HRTEM, and FTIR study of Ca-doped $Al_2O_3$.—73-12738

**calculations,**
Calculation of $4f^65d$ energy levels of $Eu^{2+}$ ion in KX (X=Cl, Br, I) crystals.—73-08560
Comparative study of all-electron and core pseudopotentials basis sets for periodic ab initio Hartree-Fock calculation: the case of $MgSiO_3$-ilmenite.—73-05373
Determination of crack growth parameters and validation of a $v$-$K_I$ relation from statistical and dynamic experiments.—73-03261
First-principles calculation of electronic, optical, and structural properties of $\alpha$-$Al_2O_3$.—73-05400
General algorithm for calculating batches in the ceramic industry.—73-08339
Influence of Weibull modulus on distribution of estimated modulus.—73-09623
Life-assessment technology for power-plant components.—73-13559
Predicting the life of high-temperature structural components in power plants.—73-13579
Use of gate R&R [repeatability and reproducibility] studies and their relationship to the testing of ceramic materials.—73-08455

**calorimeters/calorimetry,**
Electronic and lattice characteristics of lead selenide studied by low-temperature (1–4 K) calorimetric spectroscopy.—73-16131

**capacitors,**
Ceramic capacitor with a grain-boundary-insulated structure.—73-04189
Ceramic composition.—73-11003
Ceramic materials of improved dielectric constants, and capacitors fabricated therefrom.—73-11004
Characterization of insulating boundary layers of BL [barrier layer] capacitors.—73-07287
Characterization of insulating boundary layers of BL [boundary layer] capacitors.—73-14682
Conduction properties of grain boundary in $SrTiO_3$-$Bi_2O_3$ capacitors.—73-00940
Conduction properties of grain boundary in $SrTiO_3$-$Bi_2O_3$ capacitors.—73-10926
Development and fabrication of thin film $BaTiO_3$ capacitors using radio-frequency magnetron sputtering.—73-07297
Dielectric ceramic compositions.—73-04205
Doping in low-temperature-sintered $SrTiO_3$ GBBL [grain boundary barrier layers] capacitors.—73-04079
Effect of $SiO_2$ on the reliability of multilayer ceramic capacitors with Ni electrode.—73-07306
Effects of bias-temperature cycling on electrical characteristics of YBCO/YSZ/Si Su/S capacitors.—73-04082
Effects of nitridation temperature on the electron trap characteristics of nitrided-oxide metal-oxide-semiconductor capacitors.—73-07474
Electrical properties of ferroelectric thin-film capacitors with different structures.—73-04549
Fast decay component of the remanent polarization in thin-film PZT capacitors.—73-11573
Fine-grained $BaTiO_3$ powder mixture and method for making.—73-04209
Grain core–grain shell structure in Nb-doped $BaTiO_3$ capacitor ceramics.—73-10952
Grain-boundary structure of $Bi_2O_3$-diffused $BaTiO_3$ BL capacitor.—73-00974
Grain-boundary structure of $Bi_2O_3$-diffused BL capacitor.—73-10953
High-frequency $c$-$v$ investigation of metal-oxide-semiconductor capacitors prepared by low-temperature subatmospheric pressure chemical vapor deposition of $SiO_2$ films on silicon substrates.—73-14958
Measurements of hydrogen redistribution in hot electron injection of MOS capacitors.—73-04133
Metal-oxide-semiconductor capacitor formed from thermally oxidized $n$-type 6H-SiC with the $(000\bar{1})$C orientation.—73-11313
Method for manufacturing a ceramic capacitor having varistor characteristics.—73-04217
Method for manufacturing electrodes for multilayer ceramic capacitors.—73-11029
Method of forming an integrated circuit capacitor dielectric and a capacitor formed thereby.—73-04220
Method of making varistor or capacitor.—73-01379
Physicochemical control of $BaTiO_3$ powders and incidence on the quality of ceramic capacitors.—73-10982
Process for fabricating a ferroelectric capacitor in a semiconductor device.—73-04587
Process for producing ceramic capacitors with thinner electrodes.—73-04229
Process-dependent electrical characteristics and equivalent circuit model of sol-gel-based PZT capacitors.—73-11604
Pump-probe charge-integrating investigation of trap emission kinetics in ultrathin MOS capacitors.—73-04159
PZN-based relaxors for MLCC's [multilayer ceramic capacitors].—73-14726
Semiconductor device having a capacitor dielectric film of multilayer structure and a method of controlling the same.—73-11543
Semiconductor integrated circuit having silicon nitride provided as insulator of capacitor.—73-11051
Simplified closed-form trap-assisted tunneling model applied to nitrided oxide dielectric capacitors.—73-10987
Terminal electrodes for multilayer ceramic capacitor and method of manufacture thereof.—73-04236
Thin-film capacitor and apparatus for manufacturing [the] same.—73-04238

**capillarity,**
Coalescence of two viscous cylinders by capillarity: I, Theory.—73-02561
Coalescence of two viscous cylinders by capillarity: II, Shape evolution.—73-02562
Hydraulic and electroosmotic flow through silica capillaries.—73-08882
Polycapillary model of a porous medium for analyzing filtration processes in ceramics.—73-03182

**carbides,**
$Al_2O_3$-based ceramic.—73-12337
Alumina–chromium carbide composite through an internal synthesis method.—73-02725
Apparatus and method for producing carbide coatings.—73-01841
Apparatus and methods for producing ceramic products.—73-01842
Behavior of nucleation and growth of carbide layers on alloyed carbide particles in substrates in salt bath carbide coating.—73-09022
Carbide tips for bandsawing.—73-15960
Carbides of Rare-Earth Metals: Phase Diagrams of R.E.M.-C Systems.—73-13650
Carbon fibers having high strength and high modulus of elasticity and polymer composition for their production.—73-12448
Carbothermal synthesis of binary (MX) and ternary ($M^1$, $M^2X$) carbides, nitrides, and borides from polymeric precursors.—73-12934
Characteristics of chromium carbide layers produced on martensitic stainless steel using different chemical vapor deposition (CVD) techniques.—73-10201
Charge transfer between monolayer graphite and NbC single-crystal substrates.—73-02559
Chemical vapor deposited in situ composites in the system Ti-Si-C.—73-02744
Chemical vapor deposition of novel electronic materials from carbon disulfide.—73-11111
Chromium-carbide-reinforced composite coatings for high-temperature hard-coat applications.—73-06750
Comet-shaped carbides in the uppermost surface layer of bearings.—73-05372
Complex carbides in synthetic diamond crystals produced at *≈5.5 GPa.—73-08579*
Costing carbide indexable drills.—73-05262
Crystal structure, magnetic susceptibility, and electrical conductivity of the uranium silicide carbides, $U_3Si_2C_2$ and $U_{20}Si_{16}C_3$.—73-05377
CVD carbide coatings on Blackglas–Nicalon (C) composites for oxidation protection.—73-10514
Effects of carbide addition on the mechanical properties of the $Ti(C_{0.5},N_{0.5})$-30 wt% $TiB_2$-carbide sintered compacts.—73-03274
Effects of chemistry on the grain size refinement in nanocrystalline Ru and Ru-C powders prepared by mechanical attrition.—73-16747
Effects of $Cr_3C_2$ particulate-reinforced alumina composites on microstructure and mechanical properties.—73-16748
Electronic Structure of Refractory Carbides and Nitrides.—73-09763
Encapsulation of ZrC and $V_4C_3$ in graphite nanoballs via arc burning of metal carbides/graphite composites.—73-12429
Enrichment in molybdenum carbides and nitrides during $Ar^+$ bombardment.—73-09118
Formation and magnetic properties of rapidly quenched $R_2Fe_{17}C_x$ (R=Gd and Ho) compounds with higher C concentrations.—73-05569
Friction and wear behavior of a number of ceramic-coated steels matched as sliding pairs to various surface-treated steels.—73-06795
Gas pressure sintering of $SiC_p$-$TiC_p$ composites.—73-13068
Gas-pressure combustion sintering and properties of $Cr_3C_2$ ceramic and its composite with TiC.—73-05822
Gas-pressure combustion sintering and properties of $Cr_3C_2$ ceramic and its composite with TiC.—73-13071
Group VIB metal carbides from metal salicylate precursors.—73-02097
Improved mechanical properties of $Cr_3C_2$ using particulate SiC reinforcement.—73-09615
Lifetime of positrons in carbides with $B1$ structure.—73-05429
Magnetic and Mossbauer effect study of $Er_2Fe_{17}C_2$.—73-07948
Making carbides and nitrides.—73-12477
Method for forming carbide coating on various metals and their alloys.—73-00286
Model of $Sm_{11}Fe_{12}C_{18}$ crystal structure.—73-16219
Molten salt electrodeposition of refractory metal carbide: II, Mechanism and nucleation studies.—73-06834
Mossbauer study of $Gd_2Fe_{17}C_{20}$ compound prepared by melt quenching.—73-08672
Phonon-free superconductivity of cubic monocarbides and mononitrides.—73-16272
Plasma-sprayed Mo-$Mo_2C$ composites: microstructure and properties.—73-06840
Prealloyed high-vanadium, cold work tool steel particles and methods for producing the same.—73-00293
Preparation of $Yb_2Cr_2C_3$ and magnetic properties of the carbides $R_2Cr_2C_3$ (R=Yb, Ld–Lu) with $Ho_2Cr_2C_3$-type structure.—73-04639
Process for the preparation of metal carbides.—73-02129
Processing of ceramic carbide powders in a nontransferred arc thermal plasma reactor.—73-05998
Processing TiZrC and $TiZrB_2$.—73-08538
Production of metal carbide articles.—73-05332
Rapid omnidirectional compaction process for producing metal nitride, carbide, or carbonitride coating on ceramic substrate.—73-01879
Recent trend of carbide tool materials.—73-08539
Refractory carbide coatings on carbon synthesized by fused slurry process.—73-06018
Regularities of the oxidation-reduction reactions in mixtures of carbides and oxides of metals of the IVA and VA groups.—73-12675
Sliding material.—73-10351
Structure defects in rare-earth-iron carbides with the hexagonal $Th_2Ni_{17}$ structure type: a study by means of high-resolution electron microscopy.—73-03113

Superconducting material comprising $Rb_xCs_yC_{60}$.—73-12002
Surface-coated hard material for cutting tools or wear-resistance tools.—73-03702
Tetragonal and cubic crystal structures of some binary and ternary metal dicarbides in the series Ce-Er, Ce-Lu, U-La, and U-Ce.—73-02518

**carbon dioxide,**
Carbon recycling system using waste heat: studies on activated magnetite.—73-02004
Chemical technologies for global environment.—73-03386
$CO_2$ decomposition by oxide ceramics intercalated in layered compound.—73-05371
Control of solid catalyst structure for resource production from carbon dioxide.—73-02008
Effect of carbon dioxide on the reaction of $YBa_2Cu_3O_{6.5+x}$ with water vapor.—73-11731
Effect of $SO_2$ and $CO_2$ on cement paste.—73-00077
Effect of the Heat Utilization Order on production processes in the brick and tile industry.—73-05111
Geopolymer cements to minimize carbon dioxide greenhouse warming.—73-03475
Hydrophobic silica $CO_2$ aerogels.—73-00641
Power station with low environmental pollution.—73-02017
Prospects for using high-power $CO_2$ lasers to machine and weld quartz glass products.—73-01823

**carbon fibers,**
Active brazing alloy containing carbon fibers for metal-ceramic joining.—73-13794
Application of a polymeric boron nitride precursor as a matrix in carbon fibers.—73-09019
Application of carbon fibers to construction materials in Japan—a review.—73-12411
Application of carbon fibers to the resistive wire anode of position-sensitive proportional counters for soft X-rays (100–1000 eV).—73-04059
Behavior of carbon fiber-reinforced cement composites in direct tension.—73-03436
Burner rig oxidation of continuous carbon fiber-reinforced silicon carbide.—73-09524
C/SiC turbine rotor development.—73-12414
Carbon fiber-reinforced SiC composites produced by reaction bonding.—73-12930
Carbon-fiber-reinforced SiC composites produced by reaction bonding.—73-05698
Changes in fracture surface area and actual fracture energy of a carbon-fiber-reinforced silicon nitride composite during failure.—73-09546
Changes in fracture surface area and actual fracture energy of a carbon-fiber-reinforced silicon nitride composite during failure.—73-17243
Chemical vapor deposition of very thin coatings on carbon fiber bundles.—73-09042
Composite carbon-carbon materials[—literature review].—73-12420
Composite material with carbon-reinforced fibers and its production.—73-12454
Concrete reinforced with up to 0.2 vol% of short carbon fibers.—73-06643
Effect of annealing the polymer on the adhesion between carbon fibers and a thermoplastic matrix.—73-03577
Effect of carbonization atmospheres on yields and tensile strength of phenolic resin-based carbon fibers.—73-02781
Effect of carbonization atmospheres on yields and tensile strength of phenolic resin-based carbon fibers.—73-12999
Effect of the structure of carbon fibers on the structure of fiber intercalated compounds.—73-12577
Electronic properties of activated carbon fibers.—73-12796
Engineering properties of carbon-fiber-reinforced cement composites.—73-00083
Enhancement effect of micropore filling for supercritical methane by MgO dispersion.—73-08529
Evaluation of naphthalene-based mesophase as a carbon fiber precursor.—73-13050
Evaluation of the actual fracture energy of the carbon fiber-reinforced silicon nitride composite by the Kr-BET adsorption technique.—73-13527
Evaluation of the actual fracture energy of the carbon-fiber-reinforced silicon nitride composite by the Kr-BET adsorption technique.—73-06409
Fabrication and characterization of carbon-fiber-reinforced glass composites.—73-03842
Fabrication and mechanical properties of carbon fiber-reinforced silicon carbide composites.—73-13529
Fabrication and mechanical properties of carbon-fiber-reinforced silicon carbide composites.—73-06413
Fiber pullout and fracture energy of C-fiber/C-matrix composites.—73-06420
Flexural and shear behavior of concrete beams reinforced with 3-D continuous carbon fiber fabric.—73-00094
Foreseeing of fracture in CFGFRP composites by the measurement of residual change in electrical resistance.—73-12140
Foreseeing of fracture in CFGRFP composites by the measurement of residual change in electrical resistance.—73-06425
Formation and microstructure of nodular filamentous carbon.—73-13398
Fracture toughness of carbon-fiber-reinforced ceramic composites.—73-06440
Heat treatment method for silicon- and carbon-containing ceramic fibers and fibers of the same kind with a laminated structure.—73-01856
High-temperature treatment of carbon fiber/ceramic composites prepared for borosiloxane.—73-13088
Hybrid matrix composites reinforced with carbon fibers via polymer pyrolysis.—73-02853
Improvement of output voltage in ir sensor using semiconductive fiber by treatment of high-voltage pulse.—73-07576
Infrared sensing by semiconducting ceramic monofiber.—73-02622
Inhibition of the oxidation of carbon fibers and composites.—73-13476
Interaction between carbon fiber and pitch as measured by high-temperature electron paramagnetic resonance.—73-13404
Interfacial shear strength evaluation of ceramic-coated carbon fibers.—73-13556
Interfacial structure of chemical vapor infiltration carbon fiber/SiC composite.—73-06238
Izod impact test for measuring the fracture energy of fiber-reinforced ceramics.—73-12153
Matrix cracking and fiber bridging of carbon-fiber-reinforced carbon matrix composites.—73-06472
Mechanical properties of fine carbon filaments by microtensile test method.—73-13563
Mechanical properties of high-strength cement composite with carbon fiber.—73-06685
Method for the preparation of silicon carbide-carbon fiber composite.—73-12490
Method of coating carbon fibers with a carbide.—73-02113
Microstructure effects on humidity-sensitive electrical resistivity of carbon fibers.—73-05597
Microstructure effects on humidity-sensitive electrical resistivity of carbon fibers.—73-16544
Modeling and simulation of the oxidative stabilization process of pitch-based carbon fibers.—73-13480
Novel method for measuring direct compressive properties of carbon fibers [CF's] using a micromechanical compression tester.—73-15826
Performance of a carbon fiber-reinforced mullite [C/mullite] matrix composite.—73-06499
Pitch-based advanced carbon materials—resourceful utilization technologies of pitch.—73-12439
Potential qualities of pitch-based carbon fiber for high-temperature composites.—73-17410
Preparation of carbon fiber/carbon composites using intercalated carbon fibers.—73-13184
Preparation of unidirectionally reinforced carbon–SiC composite by repeated infiltration of polycarbosilane.—73-13209
Preparation of unidirectionally reinforced carbon-SiC composite by repeated infiltration of polycarbosilane.—73-05983
Properties of residue compounds obtained from $H_2SO_4$–carbon-fiber-intercalated compound.—73-16578
Pulsed chemical vapor infiltration of SiC to three-dimensional carbon fiber preforms.—73-02984
Pyrolytic carbon fiber/aluminum composites.—73-10268
Reactivities of carbon fibers in hot-pressed carbon-fiber-reinforced SiC ceramic composite.—73-16971
Science and application of new carbon.—73-02088
Self-diagnosis of fracture in CFGFRP composites and CFGFRP-reinforced concrete.—73-01928
Sliding wear of an aluminum-silicon alloy reinforced with nickel-coated carbon fibers.—73-09671
Strength degradation of SiC-coated carbon fibers.—73-09676
Structural features and Young's modulus of carbon fibers.—73-03359
Surface characterization of carbon fibers and interfacial properties of carbon fiber composites.—73-13454
Weaving ability of pitch-based carbon fiber and its evaluation method.—73-12446

**carbon monoxide,**
Contact combustion type carbon monoxide sensor.—73-11515
Continuous on-line determination of CO concentration in kilns for firing porcelain.—73-10809
Low-temperature catalytic gas purification from CO.—73-16530
Low-temperature FTIR investigation of the interaction of CO with nanosized ZSM-5 and silicalite.—73-08903
Making resistance gas sensors.—73-11026
New gas-sensing method for detecting carbon monoxide by use of the complex impedance of a CuO/ZnO heterocontact under a dc bias voltage.—73-11348
Selective sensing of carbon monoxide gas in CuO-banded ZnO ceramics.—73-15157

**carbon,**
Aerocapacitor: an electrochemical double-layer energy storage device.—73-07282
Alumina coated with a layer of carbon as an absorbent.—73-05187
Application of $Cr_2O_3$-bearing–magnesia raw materials to magnesia-carbon bricks.—73-00776
Attempt to grow diamond phase carbon films from an organic solution.—73-09021
Behavior of boric compounds added in MgO-C bricks.—73-00779
Behavior of carbon obtained from pitch and resin added to carbon-containing refractories.—73-14574
Behavior of carbon-containing refractories at high temperature.—73-00780
Binding and plasticizing agent for preparing carbon-containing, refractory, ceramic materials, and material prepared therewith.—73-14633
Burning moderate quicklime for aerated fly ash concretes in vertical kiln.—73-10706
$C_{60}$ solid-state rotational dynamics and production and EPR spectroscopy of fullerenes containing metal atoms.—73-16038
Carbofilm: present and future applications in biomedical devices.—73-08526
Carbon bricks for blast-furnace hearth lining under the effect of hot metal.—73-14577
Carbon coating of ceramic materials by pyrolysis of polymeric-based systems.—73-16662
Carbon from phenolic resins: carbon yield and volatile components—recent studies.—73-10707
Carbon growth by thermal laser-assisted chemical vapor deposition.—73-12931
Carbon materials in medicine.—73-08527
Carbon nanotubes at as-grown top surface of columnar carbon deposit.—73-17112
Carbon substance and its manufacturing method.—73-05288
Carbon-containing black glass monoliths.—73-00728
Carbon-containing black glass monoliths.—73-14535
Carbon-containing carbon-bonded refractories with improved physical properties.—73-14636
Carbon-silicon carbide composite material and method for the preparation thereof.—73-15979
Carbonaceous protective films and method of depositing the same.—73-02090
Carbons and fullerenes—chemical modifications of fullerenes.—73-12416
Carbons and fullerenes.—73-12417
Characteristics of carbon-coated optical fibers.—73-03823
Characterization of hydrogenated amorphous carbon films by nuclear magnetic resonance techniques.—73-08569
Characterization of tungsten films and hard tungsten-carbon coatings prepared by dc magnetron sputtering process.—73-03568
Chemically treated glass fibers with improved reinforcement properties.—73-03910
Coated carbonaceous articles and method for making [the] same.—73-15983
Coating of SiC gradient carbon material with mullite film and its oxidation resistance.—73-17216
Compaction, distribution, and chemical bonding of tungsten-implanted glassy carbon.—73-12553
Comparative study of the fretting wear of hard carbon coatings.—73-03246
Comparison of techniques for producing diamondlike carbon coatings.—73-12952
Comparison of three techniques for depositing DLC [diamondlike carbon] films at temperatures between 25° and 100°C.—73-16680
Continuously restoring cathode [CRC].—73-08328
Dependence of mechanical properties of MgO-C bricks on graphite content.—73-17273
Determination of $sp^2/sp^3$ carbon bonding ratio in a-C:H including irradiation damage by factor analysis of Auger electron spectra.—73-16106
Determination of trace levels of free carbon in lime.—73-09885
Development of $Al_2O_3$-C refractories for iron-ore smelting reduction furnace.—73-00800
Development of high-performance $Al_2O_3$-C castable.—73-10719
Development of semigraphitized silicon carbide–carbon brick.—73-07206
Diamond growth on turbostratic carbon by hot filament chemical vapor deposition.—73-12985
Diamondlike amorphous carbon films prepared by rf sputtering in argon.—73-09071
Diamondlike amorphous carbon films prepared by rf sputtering in argon: electron-assisted investigations.—73-12987
Diamondlike carbon thin film protected hologram and method of making [the] same.—73-12463
Effect of carbon coating on mechanical strength of SiC whisker-reinforced alumina composites.—73-17281
Effect of ion energy flux on the properties of hydrogenated amorphous carbon films.—73-02788
Effect of microstructure and hydrogen content on the characteristics of amorphous hydrogenated carbon protective coatings.—73-03137
Effect of oxygen on hydrogenated amorphous carbon films.—73-13011
Effect of pitch and phenolic resin on the mechanical properties of $Al_2O_3$-C nozzle.—73-00804
Effect of radio frequency substrate biasing in the deposition of diamondlike carbon films in an electron cyclotron resonance discharge.—73-02794
Effects of carbon impurities in high-$T_c$ superconducting tapes using Auger electron spectroscopy.—73-04707
Effects of impregnation on the manufacture of high-density carbon materials.—73-16752
Electrochemical patterning of amorphous carbon on diamond.—73-09111
Electron drift mobility in DLC [diamondlike carbon] thin films.—73-12794
Electron spin resonance study of diamondlike nuclei produced in an Si surface layer by high-dose C ion doping.—73-06157
Electronic structure of fullerenes and fullerides: artificial atoms and their solids.—73-16134
Emission spectra and morphology of carbon films by ECR plasma CVD.—73-03141
Etch masks of semimetallic amorphous carbon thin films produced by electron-beam sublimation of graphitic carbon.—73-07510
Fluorohydrogenated amorphous carbon (a-C:H, F) films prepared by the rf plasma decomposition of 1.3-butadiene and carbon tetrafluoride.—73-09134
Formation of carbon nanotubes by evaporation of carbon rod containing scandium oxide.—73-17135
Forming of carbon powders by cyclic-CIP and analysis of their densification behavior.—73-16798
Graphite, natural and synthetic particles.—73-12277
Graphite/carbon articles for elevated temperature service and method of manufacture.—73-12466
Growth and morphology of carbon grains.—73-09458
Growth of high-quality *p*-type GaAs epitaxial layers using carbon tetrabromide by gas-source molecular beam epitaxy [GSMBE] and molecular beam epitaxy.—73-11236
Hall mobility and temperature-dependent photoluminescence of carbon-doped GaAs.—73-14956

Handbook of Carbon, Graphite, Diamond, and Fullerenes: Properties, Processing, and Applications.—73-06603
High-flexural-strength ceramic fiber-reinforced silicon carboxide composite.—73-03930
High-temperature oxidation failure of C/SiC continuous fiber ceramic matrix composites.—73-13474
Inference of substrate temperature on the formation of carbon films by hybrid plasma CVD.—73-09171
Influence of carbon source on the synthesis of AlN powder from aluminum polynuclear complexes.—73-02867
Influence of properties on carbon solid by preheat-treatment temperature.—73-13553
Influence of substrate temperature on the formation of carbon films by hybrid plasma CVD.—73-16842
Intermittent carbon coatings for application in ceramic matrix composites.—73-08533
Ion-beam-induced compaction in glassy carbon.—73-09473
Kinetics and mechanisms of oxidation of 2D woven C/SiC composites: I, Experiemental approach.—73-17225
Kinetics and mechanisms of oxidation of 2D woven C/SiC composites: II, Theoretical approach.—73-17226
Kinetics of the reduction of carbon/alumina powder mixture in a flowing nitrogen stream.—73-13112
Kinetics of wetting and spreading of Cu-Ti alloys on alumina and glassy carbon substrates.—73-03613
Linear thermal expansion coefficient and biaxial elastic modulus of diamondlike carbon [DLC] films.—73-08900
Magnesia-carbon refractory compositions for slide gate plates and method of manufacture.—73-04033
Material properties and tribological performance of hydrogenated sputter carbon overcost on rigid disk.—73-17375
Mechanical properties of hydrogenated hard carbon films.—73-09639
Mechanism of carbon incorporation during GaAs epitaxy.—73-04400
Mesophase pitches, carbon fiber precursors, and carbonized fibers.—73-02105
Method for coating optical fibers.—73-03942
Method of forming titanium nitride coatings on carbon/graphite substrates by electric arc thermal spray process using titanium feed wire and nitrogen as the atomizing gas.—73-05316
Method of producing a carbon-coated ceramic membrane and associated product.—73-04998
Microhardness and Young's modulus of diamond and diamondlike carbon films.—73-13572
Microstructure of carbon layers deposited on optical fibers and hydrogen diffusion in the layers.—73-06311
Microstructure of carbon layers deposited on optical fibers and hydrogen diffusion in the layers.—73-17169
Microtexture of high surface area activated carbons.—73-13432
Nanocomposite Si/C/N powder production by laser-aerosol interaction.—73-09219
Nanoindentation response of systems with thin hard carbon coatings.—73-12837
New forms of carbons and nonequilibrium processing.—73-12638
Noble gas ion-assisted evaporation of carbon.—73-16882
Notch effects in carbon matrix composites.—73-17406
Observation of hydrogenated amorphous carbon films by atomic force microscopy.—73-08679
Optical absorption and photoluminescence of unhydrogenated amorphous carbon films.—73-05600
Optical properties of amorphous carbon thin films prepared by plasma deposition in a graphite hollow cathode.—73-12849
Oxidation mechanisms and kinetics of 1D-SiC/C/SiC composite materials: I, An experimental approach.—73-06317
Oxidation mechanisms and kinetics of 1D-SiC/C/SiC composite materials: II, Modeling.—73-06318
Oxidation of carbon in continuous fiber-reinforced ceramic matrix composites.—73-09532
Oxidation of carbon in fiber-reinforced ceramic matrix composites.—73-17233
Oxidation-resistant carbon and method for making [the] same.—73-05323
Oxidizing prevention of MgO-C bricks for converter.—73-00833
Peculiar magnetic property of pyrolytic carbon prepared from adamantane.—73-16561
Periclase-carbon refractories bonded with lignosulfonates and complex additives.—73-00835
Periclase-carbon tubes for protection of a stream of metal from secondary oxidation.—73-00836
Permeability of MgO-C bricks.—73-00837
Photoluminescence of superlattices in GaAs δ-doped with C.—73-07728
Plasma deposition of BN, BCN:H, and Me-BCN:H films using N-trimethylborazine (M=Ti, Nb).—73-09241
Plasma diagnostics of rf discharges used for the deposition of hydrogenated amorphous carbon coatings.—73-09242
Potential role of atomic carbon in diamond deposition.—73-13170
Preparation of Al-C-O-N films by microwave plasma chemical vapor deposition.—73-16911
Preparation of C-SiC composites and its properties.—73-02946
Preparation of carbon molecular sieves by propylene pyrolysis over microporous carbons.—73-08537
Preparation of carbon solid from dormant mesophase pitch without using a binder.—73-02948
Preparation of carbon/ceramic composite materials by use of raw coke: VIII, Rod shape growth of ß-SiC and effects on fracture toughness in carbon-based ceramic composites.—73-16919
Preparation of diamondlike carbon films by ECR plasma CVD with an additional negative bias.—73-16922
Process for preparing self-supporting bodies and products produced thereby.—73-00296
Processing-structure properties' relations in titanium boron carbon ceramic-ceramic composites produced by transient plastic phase processing.—73-16954
Reaction between magnesia and carbon at high temperature.—73-00847
Recent findings in the development of magnesia-carbon brick.—73-10759
Research and modeling of carbon combustion diffusion kinetics during burning of fuel-containing ceramics under commercial production conditions.—73-15753
Science and application of new carbon.—73-02088
Si-C-O system: II, Isobaric evolution of the system.—73-16302
SiC/C composite sheets produced from polycarbosilane/resin/binder mixtures.—73-06040
SiC/C composite sheets produced from polycarbosilane/resin/binder mixtures.—73-13252
Silicon diimide, a process for its preparation and silicon nitride obtained therefrom.—73-05338
Spectroscopic ellipsometry of carbon electrodes during electrochemical activation.—73-15171
Stability of metals, carbides, and oxides in carbon-magnesia refractories.—73-00868
Structural model of glassy carbon based on Auger spectroscopic analyses.—73-16325
Structure and tribology of hard carbon films synthesized by ion beam deposition.—73-17013
Synthesis of diamondlike carbon (a-C:H) films by hybrid plasma CVD—effects of ion beam injection energy on film deposition.—73-03046
Synthesis of diamondlike carbon (a-C:H) films by hybrid plasma CVD—effects of ion-beam injection energy on film deposition.—73-13303
TEM observations of SiC-SiC composites with a carbon interphase layer annealed in air at high temperatures.—73-03205
Temperature measurement with a carbon thermal indicator.—73-01931
Thermal stability of encapsulated tungsten/carbon multilayer thin films.—73-08992
Thermomechanical properties of $Al_2O_3$-C slide plate brick.—73-10776
Thermostability of diamondlike carbon [DLC] films.—73-08997
Thermostability of diamondlike carbon films.—73-16640
Time-dependent evolution of the structure and chemical bonds in diamondlike carbon films generated by the hot filament chemical vapor deposition method.—73-16383
Turning of carbon and glass fiber hybrid cloth composite material.—73-04951
Ultrasonic characterization of oxidation mechanisms in Nicalon/C/SiC composites.—73-17236
Variation of crystal-field coefficients with carbon content in the $Sm_2Fe_{17}C_{3-\delta}$ series of compounds.—73-09005
Wear mechanisms of amorphous carbon and zirconia coatings on rigid disk magnetic recording media.—73-09694
Wear reduction by pyrolytic carbon on tribosurfaces.—73-09697
X-ray photoelectron spectroscopy and X-ray-excited Auger electron spectroscopy studies of the initial deposition of hydrogenated amorphous carbon.—73-05523

**carbon-carbon composites,**
Advanced carbon-carbon for space radiators.—73-12409
Arc-jet testing of damaged RCC-3 repaired using preceramic polymers.—73-12412
Assessment of carbon-carbon composite research in the Far East.—73-15959
Carbon-carbon mounts for lightweight optical systems.—73-12415
Carbon-carbon: bringing it to the marketplace.—73-05260
Carbon-fiber-reinforced composite material having a gradient carbide coating.—73-05289
Carborane-based inhibitors for carbon-carbon composites.—73-12418
Characterization of carbon-carbon composites by laser Raman spectroscopy.—73-17114
Coating for protecting a carbon-carbon composite from oxidative degradation.—73-03913
Coating materials assessment for carbon-carbon space structures.—73-12419
Composite carbon-carbon materials[—literature review].—73-12420
Conversion coating on carbon/carbon composites with controlled microstructure.—73-15984
Development of carbon-carbon composites for primary structure and thermal protection system of space vehicles.—73-05265
Effect of joint designs on vibration natural frequencies of carbon-carbon satellite truss.—73-12426
Effects of heat treatment on mechanical and thermal properties of CVD-densified Novoltex carbon/carbon composites.—73-12428
Electrical heating resistance using resistive elements made of carbon/carbon composite material.—73-01051
Evaluation and selection of joint designs for a carbon-carbon satellite truss.—73-12430
Evaluations of the thermal shock resistances and fracture toughnesses of graphite and C-C composites by arc discharge heating.—73-05562
Experimental and statistical characterization of brittle composites.—73-09594
Failure mechanisms in mission-cycled carbon-carbon composites under flexural load at room and elevated temperatures.—73-17315
FEM analysis of SACC-II truss and component parts.—73-12431
Friction elements of composite carbon material and of differential texture.—73-02096
Glass sealants for carbon-carbon composites.—73-00494
High-temperature-resistant structure.—73-12472
Industrial R&D on advanced materials in the CIS.—73-17488
Influence of fiber surface treatment on the mechanical properties of fabric-reinforced carbon-carbon composites.—73-13550
Inhibition of the oxidation of carbon fibers and composites.—73-13476
Initial polymer degradation as a process in the manufacture of carbon-carbon composites.—73-09183
Interaction between carbon fiber and pitch as measured by high-temperature electron paramagnetic resonance.—73-13404
Intercalated hybrid graphite fiber composite.—73-05305
Internal friction measurement of carbon-carbon composites by lateral vibration method.—73-12149
Iridium coatings on carbon-carbon composites produced by two different sputtering methods: a comparative study.—73-10245
Joining of carbon-carbon composites by graphite formation.—73-12433
Joining of metal films to carbon-carbon composite material by metal plasma immersion ion implantation.—73-00246
Load transfer and failure of joints in carbon-carbon material.—73-13560
Material damping studies on carbon-carbon composites.—73-09474
Mechanical properties of carbon-carbon composites.—73-09635
Method for producing carbon-carbon composite materials.—73-02112
Method of manufacturing composite material of carbon fibers in a carbon matrix.—73-02115
Microstructural control of carbon fiber/carbon composites using high carbon yield pitches as matrix precursor.—73-13136
Microstructural design of C-C composite.—73-05269
Microstructural observations on the failure modes of a unidirectional carbon-carbon composite.—73-13422
Moisture- and oxidation-resistant carbon/carbon composites.—73-12498
NDE of structural and functional carbon-carbon composites after first carbonization.—73-17405
Porous carbon-carbon composite filtering membrane support with a carbon fiber mat substrate.—73-02120
Post coating treatment of silicon carbide-coated carbon-carbon substrates.—73-16008
Post coating treatment of silicon carbide-coated carbon-carbon substrates.—73-16009
Preparation of C/C-SiC nanomatrix composites by chemical vapor infiltration.—73-09258
Preparation of carbon fiber/carbon composites using intercalated carbon fibers.—73-13184
Process for manufacturing porous tubes of high permeability made from carbon-carbon composite material, and their application.—73-05327
Process for preparing an impermeable carbon fiber-reinforcing type of composite material.—73-02124
Sol-gel silica in the healing of microcracks in SiC-coated carbon-carbon composites.—73-12444
Strength of thin 2-D carbon-carbon composite as a function of reinforcement fabric thickness and fiber type.—73-13595
Structural articles.—73-05344
Vapor-grown carbon-fiber-reinforced carbon/carbon composites.—73-12445

**carbonates,**
Calcination and reduction of AUC (ammonium uranyl carbonate)—characteristics and phase change of powder.—73-08285
Control of crystal shape and modification of calcium carbonate prepared by precipitation from calcium hydrogen carbonate solution.—73-02754
Control of crystal shape and modification of calcium carbonate prepared by precipitation from calcium hydrogen carbonate solution.—73-12955
Crystal structure of basic calcium carbonate [BCC] and its decomposition process in water.—73-16082
Crystal structure of new natural fluorocarbonate $Na_3Ca(Mn,Ca)(CO_3)_3F$.—73-02205
Crystal structure of new natural sulfatocarbonate, $Na_{25}BaTR_2(CO_3)_{11}(HCO_3)_4(SO_4)_2F_2Cl$.—73-16088
Crystallization of $CaCO_3$ from $Ca(NO_3)_2$ solution: I, Reaction conditions and morphology of $CaCO_3$.—73-09878
Decomposition of praseodymium hydroxy carbonate and praseodymium carbonate hydrate.—73-02227
Dissolution kinetics of $CaCO_3$ in common laboratory solvents.—73-12133
Dissolution of calcium carbonate crystals: a constant-composition kinetics study.—73-16111
Dolomite.—73-12269
Effect of undecomposed carbonate on the oxygen analysis of $YBa_2Cu_3O_{7-y}$.—73-01534
Effects of cation (Sr, Pb, and Ba) on calcium carbonate polymorphs under diffusional conditions.—73-09930
Formation of macro- and microcracks during machining of ceramics.—73-05814
Fuel cells of molten carbonate type.—73-14707
Heterogeneity of carbonatites.—73-08635
Intercalation of benzenecarboxylate ions into the interlayer of hydrotalcite.—73-00981
Ir and Raman spectra of the new $Ba_{1.5}Sr_{0.5}CuO_{3+\delta}(CO_2)_y$ carbocuprate.—73-02308
New oxide superconductors containing carbonate groups.—73-01612
Pyrolysis mechanism of basic calcium carbonate.—73-08714
Pyrolysis mechanism of basic calcium carbonate.—73-16282

Spectral properties of weakly ferromagnetic dielectric crystals $CoCO_3$ in nearly saturated paramagnetic state.—73-07356
Structure and properties of $(Ba,Ca)TiO_3$ ceramics prepared using $(Ba,Ca)CO_3$ precursors: I, Crystallographic and microstructural studies.—73-13287
Structure and properties of $(Ba,Ca)TiO_3$ ceramics prepared using $(Ba,Ca)CO_3$ precursors: II, Diffuse phase transition [DPT] behavior.—73-11622
Synchrotron-radiation-stimulated tungsten deposition on silicon from $W(CO)_6$.—73-03034
Synthesis and characteristics of fibrous $3CaO{\cdot}Al_2O_3{\cdot}3CaCO_3{\cdot}32H_2O$.—73-13291
Synthesis of amorphous calcium carbonate and its crystallization.—73-17031
Thermal decomposition of hydrotalcites. An ir and NMR spectroscopy study.—73-08775
Vaterite (an uncommon polymorph of $CaCO_3$): occurrence in boreholes demonstrate unexpected longevity.—73-15916

**carbonation,**
Accelerated carbonation of a blast-furnace cement concrete.—73-03431
Carbonation and corrosion of rebars in salt contaminated OPC/PFA [ordinary portland cement/pulverized fly ash] concretes.—73-00029
Carbonation of autoclaved lightweight concretes [ALC's].—73-13686
Carbonation of concrete and the mechanism of moisture, heat, and carbon dioxide flow through porous materials.—73-06632
Carbonation of ettringite.—73-00030
Carbonation of jet cement pastes.—73-09837
Carbonation of OPC [ordinary portland cement] and OPC/silica fume hardened cement pastes in air under conditions of fixed humidity.—73-06633
Carbonation reaction of synthetic 11-Å tobermorite in aqueous solution.—73-03440
Carbonation reaction of synthetic 11-Å tobermorite in aqueous solution.—73-16044
Carbonation, moisture, and empty pores.—73-09838
Characteristics of carbonation of concrete used with ternary cement.—73-09845
Comparison between the carbonation of OPC and PFA concrete in a mass concrete structure.—73-09859
Corrosion of reinforcement in jet cement mortar due to carbonation.—73-09871
Decomposition of synthetic ettringite by carbonation.—73-03448
Diffusion and adsorption studies on hardened cement paste and the effect of carbonation on diffusion rates.—73-03452
FTIR and XPS investigations of the effects of carbonation on the solidification/stabilization of cement-based systems—portland type V with zinc.—73-06662
Influence of carbonation on the mechanical properties and texture of hardened mortar.—73-10006
Permeability and porosity changes associated with cement grout carbonation.—73-00161
Polarizing microscope—a tool of interest for investigation on concrete; application to carbonation.—73-01924

**carbonitrides,**
Analytical electron microscopy and Raman spectroscopy studies of carbon nitride thin films.—73-06186
Electrochemical and surface properties of a metal carbonitride-oxide composite electrode.—73-00960
Nanoindentation studies of ultrahigh strength carbon nitride thin films.—73-08923
Phase equilibria in the Si-C-N-O system and the kinetic analysis of silicon carbide whisker growth.—73-08692
Rapid omnidirectional compaction process for producing metal nitride, carbide, or carbonitride coating on ceramic substrate.—73-01879
Si-C-N ceramics with a high microstructural stability elaborated from the pyrolysis of new polycarbosilazane precursors: I, The organic/inorganic transition.—73-09314
Si-C-N ceramics with a high microstructural stability elaborated from the pyrolysis of new polycarbosilazane precursors: II, Effect of oxygen curing on properties of ex-PCSZ monofilaments.—73-09315
Si-C-N ceramics with a high microstructural stability elaborated from the pyrolysis of new polycarbosilazane precursors: III, Effect of pyrolysis conditions on the nature and properties of oxygen-cured derived monofilaments.—73-09316
Si-C-N ceramics with a high microstructural stability elaborated from the pyrolysis of new polycarbosilazane precursors: IV, Oxygen-free model monofilaments.—73-09317
Si-C-N ceramics with a high microstructural stability elaborated from the pyrolysis of new polycarbosilazane precursors: V, Oxidation kinetics of model filaments.—73-09318
Silicon oxycarbonitride by pyrolysis of polycyclosiloxanes in ammonia.—73-14559
Sintered carbonitride alloy with highly alloyed binder phase.—73-16018
Stress in $NbC_xN_{1-x}$ films prepared by reactive rf magnetron sputtering.—73-14734
Structural characterization of silicon carbonitride ceramics from polymeric precursors using nuclear magnetic resonance.—73-05491
Synthesis and tribological properties of carbon nitride as a novel superhard coating and solid lubricant.—73-09683

**carbosilanes,**
Mechanism of ceramization of electron-irradiation-cured polycarbosilane fiber.—73-09201

**carbothermal reduction,**
Carbothermal production of aluminum nitride.—73-09026
Kinetics of carbothermal reduction synthesis of beta silicon carbide.—73-05888
Synthesis of AlN powder by carbothermal reduction-nitridation method: effect of additives on reaction rate.—73-17030
Vacuum carbothermic reduction of uranium dioxide microspheres in a static graphite bed.—73-15702

**carriers,**
Ceramic catalyst carriers and catalysts for carrying out chemical processes and for purifying gaseous discharges.—73-12317
Characteristics of the diffusion and drift of nonequilibrium carriers in $CdCr_2Se_4$.—73-03080
Determination of the carrier concentration of doped ZnSe from infrared measurements.—73-01125
Effect of Anderson disorder on the correlation functions and binding energy of excess carriers in a $Cu_4O_8$ cluster.—73-05544
Increase in the diffusion length of carriers in polycrystalline PbTe films.—73-14978
Lifetime of the minority carriers in *p*-type epitaxial $Cd_xHg_{1-x}Te$ films.—73-07636
Photoreflectance characterization of GaAs as a function of temperature, carrier concentration [CC], and near-surface electric field.—73-11390
Polarizibility of a carrier in GaAs quantum dot.—73-04445
Preparation and evaluation of mullite ceramic carrier for immobilization of enzyme.—73-05617
Preparation and evaluation of mullite ceramic carrier for immobilization of enzyme.—73-13173
Preparation and properties of immobilized mercuric reductase in porous glass carriers.—73-10393
Problem of the intrinsic carrier density in $Cd_xHg_{1-x}Te$ solid solutions.—73-01289
Processes of recombination of nonequilibrium carriers in epitaxial GaAs films.—73-01291
Structure and carrier lifetime in LT [low-temperature] GaAs.—73-15184
Ultrafast carrier dynamics in III-V semiconductors grown by MBE at very low substrate temperatures.—73-01359

**cast iron,**
Application of antiabrasive nodular cast iron to double rollers.—73-12106
Problems with enameling cast-iron articles.—73-06844

**castables,**
Application of rheology in monolithic refractories.—73-14571
Castable lining technique to bottom of teeming ladle.—73-14578
Development and application of light-burned MgO-bonded alumina castable.—73-10714
Development of high-performance $Al_2O_3$-C castable.—73-10719
Effect of slag composition on wear of alumina-spinel castable for steel ladle.—73-14588
Effects of ultrafine $SiO_2$, $Al_2O_3$, and $Cr_2O_3$ powders on character of ultralow cement corundum castables.—73-10726
Low-cement castable replaces silicon carbide bricks used to line shaft furnace at CCR.—73-10739
New refractory practices in the anode casting department of Noranda Minerals' Horne Smelter, Rouyn-Noranda, Quebec[, Canada].—73-10747
Strength development of bauxite-based ultralow-cement castables.—73-10771
Wear mechanism of castable for steel ladle by slag.—73-14632

**casting,**
Casting from the beginning up to present-day technology.—73-08324
Casting of sanitary ware comparison of technology.—73-14563
Casting-up parameters for quartz ceramics.—73-01765
Centrifugal casting of ceramics. Principal parameters and regularities of the process.—73-02735
Centrifugal casting of ceramics. Properties of the castings.—73-12015
Continuous casting plant for graphitized alumina refractories.—73-03994
Correlation of physical properties of casting kaolins.—73-07240
Development and application of porous plastic molds for the casting of sanitary ware and dinnerware.—73-08331
Development of cast pipe for copper continuous casting.—73-10716
Formation of a ceramic composite by centrifugal casting.—73-04972
Hot casting of pressureless-sintered silicon carbide ceramics—the method.—73-05846
Injection sleeve for die casting and a method of casting an aluminum or an aluminum alloy part.—73-13917
Metal guiding separation rings for horizontal continuous casting machines.—73-00831
Method of making a complex ceramic core for use in metal casting process.—73-04035
Microwave application in precision investment casting operations.—73-05915
Mold for casting components.—73-01871
Producing cast stone sheets to close size tolerances.—73-01820
Selection of materials and parameters for sanitary ware casting.—73-07272
Simple fabrication process of intermetallic compounds utilizing low-temperature pressure casting of alumina.—73-03641
Tests of thermal insulation plates of the unpreheated lining of continuous casting machine tundishes.—73-00877

**catalyst supports,**
Carbon monoxide hydrogenation on cobalt/alumina and cobalt/NaX catalysts.—73-00213
Ceramic catalyst carriers and catalysts for carrying out chemical processes and for purifying gaseous discharges.—73-12317
Ceramic catalyst supports and catalysts for chemical processes and scrubbing of gas discharges.—73-08504
Influence of the support in the selectivity of Ni/clay catalysts for vegetable oil hydrogenation.—73-16521
Oxide catalyzed reactions of ethylene oxide under conditions relevant to ethylene epoxidation over supported silver.—73-02660
Stabilized tetragonal zirconium oxide as a support for catalysts: evolution of the texture and structure on calcination in static air.—73-02444

**catalysts/catalysis,**
Ac electrical parameters to monitor the sintering of a composite mixed conductor catalyst.—73-01880
Activated zeolite beta and its use for hydrocarbon conversion.—73-05185
Application feasibility of a calcination catalyst in cement manufacture—a case study.—73-09817
Binary La-Pd oxide catalyst and method of making the catalyst.—73-02022
Boron nitride system including an hBN starting material with a catalyst and a sintered cBN body having a high heat conductivity based on the catalyst.—73-15977
Catalyst carrier.—73-05192
Catalyst composition for improving combustion efficiency of liquid fuels.—73-02024
Catalyst comprising amorphous NiO on silica/alumina support and process for butene dimerization.—73-05193
Catalyst for cracking of paraffinic feedstocks.—73-02025
Catalyst for destruction of organohalogen compounds.—73-12342
Catalyst for purifying exhaust gas.—73-02026
Catalyst for purifyng automotive exhaust gas.—73-03673
Catalysts for the high-temperature steam reforming of hydrocarbons.—73-05194
Catalysts for the purification of exhaust gas.—73-02027
Catalytic body and process for producing the same.—73-12343
Catalytic converter having a metallic monolith mounted by a heat-insulating mat of refractory ceramic fibers.—73-05196
Catalytic converter materials for pollution control.—73-02005
Ceramic DENOX catalysts for selective catalytic reduction of industrial emissions of nitrogen oxides.—73-15922
Characterization of $Na_2O$-$MnO_x$-$CuO_x$ catalysts for the oxidative dimerization of methane.—73-09437
Chromia on silica and alumina catalysts: surface structural consequences of interfacial events in the impregnation course of aquated Cr(111) ions.—73-16055
Comparison of particle size of cracking catalyst determined by laser light scattering and dry sieve methods.—73-08383
Control of solid catalyst structure for resource production from carbon dioxide.—73-02008
Copper/zinc oxide/aluminum oxide-containing catalysts.—73-12357
Crystalline metalloaluminum borates.—73-05211
Crystallochemical nature of copper-magnesium catalysts.—73-02224
Deodorant ceramic catalysts.—73-05165
Dual zeolite fluid cracking catalyst composition for improved gasoline octane.—73-02034
Dynamic effects of vaporization with exothermic reaction in a porous catalytic pellet.—73-08602
Effect of conditions of zeolite Ni/H-DC preparation on catalytic properties in the reaction of $CO_2$ hydration.—73-16456
Effect of Si:Al ratio and type of binder on the catalytic properties of HZSM-5 catalysts.—73-13018
Evaluation of the catalytic activity of a high-surface-area, regular, porous solid formed from the clusters of clusters, $M^B_4O[(CO)_9Co_3CCO_2]_6$, M=Co, Zn.—73-05561
Exhaust gas disposable catalyst and method of manufacturing the same.—73-02035
Exhaust gas purifier for methanol-fueled engines.—73-05212
Exhaust gas purifying catalyst and an exhaust gas purifying method using the catalyst.—73-02036
Fluoride beidellite clay and process for preparing the clay.—73-12310
Gasoline hydrocracking catalyst and process.—73-12368
Group IVB oxide addition to noble metal on rare-earth-modified silica alumina as hydrocarbon conversion catalyst.—73-05215
Hydrogenation of nitriles by a tungsten carbide catalyst.—73-15995
Imogolite: a possible new type of shape-selective catalyst.—73-05171
Influence of small amounts of tungsten on the physicochemical and catalytic properties of (40)4-heteropolyanions.—73-12815
Iron-cobalt catalysts for ammonia synthesis with ceria additives.—73-16526
Material, structure, filter, and catalytic converter.—73-12375
Metal on rare-earth-modified silica–alumina as hydrocarbon conversion catalyst.—73-02047
Metal-promoter interactions in vanadium-oxide-promoted $Rh/SiO_2$ catalysts.—73-16213
Method for producing a particulate zeolite and a particulate zeolite produced thereby.—73-05224
Method for purification of lean-burn engine exhaust gas.—73-12383
Method for the reactivation of spent alumina-supported hydrotreating catalysts.—73-05228
Method of manufacturing hydrocarbon conversion catalyst.—73-02052
Nature of active sites in the oxidative coupling of methane to ethane over Li/MgO catalysts.—73-08675
Perovskite-type rare-earth complex oxide combustion catalysts.—73-02054

Photoactive catalyst of barium phosphate or calcium phosphate supported on anatase titanium dioxide.—73-02055
Precious metal catalysts utilizing composites of oxygen ion-conducting and inert support materials.—73-12394
Precious metal catalysts with oxygen-ion conducting support.—73-00294
Preparation of alumina-fiber-type catalyst for methane combustion by sol-gel method.—73-16915
Process for producing a denitration catalyst.—73-12397
Process for producing catalyst composition for use in hydrodesulfurization of hydrocarbon oil and process for hydrodesulfurizing hydrocarbon oil.—73-02059
Rare-earth-containing high-silica zeolite having pentasil type structure and process for the same.—73-02066
Supported catalysts.—73-02070
Surface NiO species in $NiO/SiO_2$ catalysts [studied] using temperature-programmed reduction and X-ray diffraction.—73-02473
Synthetic zeolites and their catalyses—highly active catalysts with molecular size recognizability.—73-12333
Unsupported molybdena catalysts: precipitation, characterization, and catalytic activity.—73-13332
Used catalyst as an additive in ceramic glazes.—73-07278
Vacancy titanates intercalated with cationic hydroxy aluminum complexes.—73-03704
Vanadia/titania catalysts in selective catalytic reduction of nitric oxide with ammonia.—73-02535
Yttrium-containing zeolite Y cracking catalyst.—73-05251
Zeolite catalyst of hexagonal structure and its application.—73-05252
Zeolite catalysts suitable for hydrocarbon conversion.—73-02075
Zeolite SSZ-37.—73-05348
Zeolite ZK-5 catalyst.—73-02078
Zeolitic catalyst of MFI type, its preparation and use.—73-05255

**cathode-ray tubes,**
Design methodology for manufacturing glass cathode ray tubes.—73-03831
Glass pressure-vessel for a cathode ray tube.—73-00734
Method of producing a glass front panel protected from coloring by electron rays.—73-03952

**cathodes,**
Cathode performance of ACF/acetylene black hybrid electrodes for phosphoric acid fuel cell.—73-10919
Cathodic phenomena in aluminum electrowinning.—73-07285
Cesium coating of thin-film zinc sulfide cold cathodes.—73-11094
Continuously restoring cathode [CRC].—73-08328
Electron-beam diodes using ferroelectric cathodes.—73-01407
Emission characteristics of metal-oxide-semiconductor electron tunneling cathode.—73-11192
Emission life and surface analysis of barium-impregnated thermionic cathodes.—73-10945
Fabrication of gated silicon field emission cathodes for vacuum microelectronics and electron-beam applications.—73-11208
Innovative high-deposition-rate plasma-transferred arch [PTA] surfacing technique.—73-08346
Low-voltage field emitter array cathode for high-frequency applications.—73-10970
Model for predicting the effects of device geometry on the capacitance of field emitter array cathodes.—73-12835
Theoretical study on three-photon excitation and photoemission on a negative electron affinity (NEA) GaAs photocathode.—73-11480

**cathodoluminescence,**
Cathodoluminescence wavelength imaging for spatial mapping of excitons bound to dislocations and structure defects in CdS.—73-09436
Characterization of zirconia-toughened alumina (ZTA) ceramics by SEM cathodoluminescence.—73-12551

**cation exchange,**
Cation exchange properties of $LiTi_2(PO_4)_3$ and synthesis of its microporous materials via glass.—73-04060

**cations,**
$^{27}Al$ NMR spectroscopic investigations on intercalation in oxyhydroxyl aluminum cations in the interlayer space of hectorite.—73-02143
Cation distribution in the Mn-Zn ferrites using Mossbauer effect.—73-05366
Effects of cation (Sr, Pb, and Ba) on calcium carbonate polymorphs under diffusional conditions.—73-09930
Insertion reaction of $V_6O_{13}$ electrodes reversibly incorporating divalent cations.—73-04119
Mossbauer study on the distribution change and charge conversion of cations in $CoFe_2O_4$.—73-07967
Multi-cation α-SiAlON's.—73-02338
Parameters affecting pressureless sintering of α′-SiAlON's with lanthanide-modifying cations.—73-05944
Redox reactions between cations of different polyvalent elements in glass melts: an optical basicity study.—73-10398
Role of cations in the formation of aqueous silica gels.—73-00698
Theory of cation substitution effect in ionic conductors.—73-01037
XRD study of cation distribution in the Mn-Zn ferrites.—73-12736

**cavitation,**
Cavity evolution during tensile creep of $Si_3N_4$.—73-06337
Effects of reinforced content and shape on cavitation and failure in metal-matrix composites.—73-03277

**cells,**
Analysis and modeling of sol foaming for the preparation of low-density ceramics.—73-12917
Impedance studies of the cell Pt/(Na, Sr)ß″-alumina/Pt.—73-04111
Strut crack formation in open cell alumina ceramics.—73-13288
Synthesis and characterization of $LiMeO_2$ (M=Ni, Ni/Co, and Co) for 4-V secondary nonaqueous lithium cells.—73-01030
Synthesis and characterization of $LiMeO_2$ (Me=Ni, Ni/Co, and Co) for 4-volt secondary nonaqueous lithium cells.—73-10993

**cellulose,**
Effects of microcrystalline cellulose on the properties of whiteware bodies.—73-10834

**celsian,**
Densification of gel-derived celsian glass.—73-03830
Gallium and germanium substitutions in celsian.—73-16161
Liquid-phase sintering of silicon-nitride-reinforced celsian ceramics for advanced radomes.—73-13118
Synthesis of glass-ceramics in the wollastonite–apatite–celsian system.—73-07182
Synthesis of monoclinic celsian glass-ceramic from alkoxides.—73-10607

**cement industry,**
Adsorptive and catalytic flue gas purification of exhaust gases from cement plants: laboratory and small-scale experiments.—73-00017
Alternative blending systems in the cement industry.—73-00023
Automatic raw mix preparation process in the cement works of Vibo Valentia and Salerno.—73-09825
Commissioning of a 2.5 million ton per year clinker production line in [S.] Korea.—73-00042
East European cement industry: looking for investment and modernization.—73-03453
Ecological and economical aspects of cement production when using waste-derived fuels.—73-00068
Efficient modification of the production line at the Kaohsiung cement works in Taiwan.—73-09941
Efficient quarrying equipment at the Mannersdorf Cement Works, Austria.—73-03463
Emerging technologies for utilizing wastes in cement production.—73-03464
Experiences with the KCS Kiln Control System at a large rotary kiln plant in South Korea.—73-15874
Gear units for the cement industry—experience, developments, and trends.—73-12030
Increasing the roller mill capacity in line 8 of Cementa AB's Slite plant.—73-03483
Inland Cement alternative fuel program.—73-05119
Magotteaux-Slegten-Sturtevant optimized cement grinding system.—73-10031
New cement grinding plant at Dyckerhoff AG's Neubeckum plant.—73-03504
New raw grinding plant with integral roller press at the Hualien cement works in Taiwan.—73-15738
New ways of energy management to increase productivity of energy in the [cement] factory.—73-00151
Operating experience with twin roll presses at the Asia Cement Corporation, Taiwan.—73-00154
Operating results and $NO_x$ emissions with the ROTAFLAM burner at the Retznei cement factory.—73-03510
Operating results of OK roller mills in Japanese and Korean cement plants.—73-03511
Optimized control system for rotary cement kilns based on a linguistic model.—73-01963
Pocket belt conveyor—a special vertical conveyor for the cement industry.—73-01811
Possible ways of energy conservation in cement manufacture.—73-03520
Practical application of rule- and knowledge-based system techniques to industrial processes.—73-01815
Present problems in cement manufacturing.—73-10093
Quality assurance and control using flexible modular system technology—POLAB.—73-10116
Raising the throughput of the roller grinding mill at the Slite [Sweden] cement works.—73-10124
Recent advancement in cement industry—manufacturing system and special cements.—73-03526
Reduction of environmental pollution by using secondary raw materials.—73-05147
Retrofit of cement grinding circuit at Cementos Veracruz Plant, Mexico.—73-03532
Safe burning of cement raw mixes.—73-03534
Sampling of trace constituents in the clean gas coming from rotary cement kilns.—73-00187
Shell scanning systems improve plant operations.—73-05086
Siam City Cement Co.'s fifth production unit with a clinker capacity of 10 000 Mt per day goes on stream.—73-13777
State of the art in raw meal grinding [in cement industry].—73-10162
Storage and metering of moist desulfogypsum at the Phoenix cement works.—73-10163
Storage of additives for cement production at the Marker Cement Works, Harburg [Germany].—73-13780
Trace element determination by X-ray fluorescence in a cement plant.—73-00201
Use of scrap tires in the U.S. cement industry.—73-03554
Utilization of industrial wastes and byproducts in cement industry.—73-10188
Ways and means of optimizing reciprocating grate coolers.—73-03558
World's largest [cement] packing and loading plant at the Tabkwang plant of Siam City Cement Co.—layout and mechanical configuration.—73-13793

**cemented carbide,**
Cemented carbide body used preferably for abrasive rock drilling and mineral cutting.—73-12449
Cemented carbide.—73-10304
Coated cement carbides and processes for the production of [the] same.—73-12451
Oxidation behavior of hard and binder phase-modified WC·10Co cemented carbides.—73-00254
Properties of CVD-coated cemented carbides affected by those of substrate.—73-13887
Quantitative phase analysis by X-ray for Co binder structure in WC-Co cemented carbides.—73-10269

**cements,**
[Cement] raw meal production with twin roll presses—a report on two years of operation experience.—73-09843
Ac impedance spectroscopy study of microcracking in cement-based composites during compressive loading.—73-03430
Ac impedance spectroscopy: II, Microstructural characterization of hydrating cement–silica fume systems.—73-06619
Accelerated aging process of AR fibers in the cement matrix.—73-13922
Accelerated testing of cements in brines.—73-03432
Acceleration of strength gain of lime-pozzolana cement by thermal activation.—73-06620
Accuracy of test method for cement content in hardened concrete by sodium gluconate.—73-09802
Action of chloride ions on hydrated cement pastes: influence of the cement type and long-time effect of the concentration of chlorides.—73-03433
Active belite cement.—73-09805
Activity and properties of pozzolan used in blended cements.—73-06622
Activity of cement stone treated by hydrodynamical method.—73-00016
Adiabatic temperature rise of low-heat cement using ground granulated blast-furnace slag and fly ash.—73-09806
Adsorption on fractal structures: applications to cement materials.—73-13673
Advanced techniques for measuring rheology of cement-based refractories.—73-08371

SEM investigations of fracture surfaces using stereo pairs: I, Fracture surfaces of rock and of cement paste.—73-03536
Separation and determination of gypsum and hemihydrate in [portland] cement using DSC.—73-10148
Separation of the aluminate and ferrite phases from cement clinker by selective dissolution and their crystal structure refinement.—73-10149
Several methods to investigate the microstructural features of the interfacial zone between a steel fiber and cement paste matrix.—73-10150
Simple chemical clock reactions: application to cement hydration.—73-10152
Simultaneous production of cement and electrical power by fluidized bed combustion of pretreated gangue.—73-06716
Simultaneous rheological and kinetic measurements on cement pastes.—73-00188
Single-component alkali metal silicate cement composition.—73-12403
$SO_3$ content of portland and blended cements: porosity and behavior of the resultant mortars.—73-13779
Solubility of $Ca(OH)_2$ and $CaSO_4{\cdot}2H_2O$ in the liquid phase from hardened cement paste.—73-10157
Special and new cements.—73-10159
Special features of cement standards in China.—73-10160
Strength and toughness of reinforced chemically bonded ceramics [CBC's].—73-10164
Strength development and heat of hydration of low heat cement.—73-06721
Strength development in hardened cement paste: examination of some empirical equations.—73-06722
Stress corrosion of cement mortars in ammonium sulfate solution.—73-03541
Subcluster model of cement particle size distribution.—73-06723
Suitability of rice husk ash obtained by fluidized-bed combustion for blended cement.—73-06724
Sulfoferrite cements.—73-13784
Summary of the results of laboratory inspections conducted by the Cement and Concrete Reference Laboratory.—73-10173
Synthesis and properties of low-energy cements based on $C_4A_3\$$ [tetracalcium trialuminate sulfate].—73-13785
Synthetic fiber-reinforced cement composites—optimization of the composition and structural and mechanical properties.—73-10177
Technology and application of BauMix cellular concrete.—73-00196
Thermodynamic model for blended cements.—73-03547
Thermodynamic modeling of cement degradation: impact of redox conditions on radionuclide release.—73-03548
Toughening of high-strength cementitious matrix reinforced by discontinuous short fibers.—73-10182
Trace element balances in kiln system of a few Indian cement plants.—73-10183
Transformations of hydrate phases at low temperature.—73-13790
Two experimental techniques for studying the effects of the interfacial zone between cement paste and rock.—73-08452
U.S. Cement: restructured and positioned for awaited upturn.—73-03549
Unexpected effects of alkali hydroxide added to cement mix water.—73-03550
Update on the properties of clinker and cement derived from industrial chemical wastes.—73-03551
Use of oscillatory shear to study flow behavior of fresh cement paste.—73-00202
Use of the volcanic rock of Zakarpatya as active mineral admixture in cement.—73-15915
Variations of water absorption rate and porosity with depths from an exposed concrete surface: effects of exposure conditions and cement type.—73-10190
Why performance standards for hydraulic cement.—73-10192

XRD analysis and leachability of solidified phenol-cement mixtures.—73-06733
Zeta potential of cement with new type apparatus applying laser or ultrasonic technology.—73-10194

**centers,**
Annihilation of paramagnetic centers in yttria-stabilized zirconia.—73-03078
Bound phonons and DX centers in GaAs under hydrostatic pressure.—73-11086
Calculation of $F^+$ centers in the $CuO_2$ plane of HTSC.—73-15395
Capacitance-voltage characteristics of selectively doped heterostructures containing deep centers.—73-01090
Deep trapping centers in *n*-type GaAs bombarded with fast neutrons.—73-14826
Deformation-stimulated changes in the concentration of light-emitting centers in GaAs.—73-01121
Direct proof of two-electron occupation of Ge-DX centers in GaAs codoped with Ge and Te.—73-11143
EL2 center family [studied] by polarization-luminescence methods.—73-07478
Energy band structure of $La_2O_3$ crystal and $F^+$, $F$ centers.—73-02265
ESR studies of $Mn^{2+}$ centers in $Sr_{1-x}Ba_xF_2$:Mn crystals.—73-05397
Formation of deep centers in GaAs by laser irradiation.—73-07536
Ground state parameters of $F$ center in BeO.—73-16162
Index gratings stabilized by deep centers for fast optical addressing.—73-07589
Influence of annealing on the spectrum of deep centers in ZnSe.—73-01200
Kinetics and mechanism of the destruction of $PO_4^{2-}$ centers in phosphate glasses activated by silver.—73-00362
Local vibronic instability of low-symmetry centers.—73-16199
Magnetophotoconductivity studies of $D^0$ and $D^-$ centers in GaAs quantum wells in metallic and insulating states.—73-07655
Methyl- and dimethyl-associated paramagnetic centers in $SiO_2$ thin films.—73-12834
Multifrequency and Fourier transform electron paramagnetic resonance and electron spin echo spectroscopies for determination of the $T_1$ and $T_2$ spin-lattice relaxation times of the $E'_1$ center.—73-03742
Nature of paramagnetic centers in cadmium borate glasses.—73-00378
Nature of paramagnetic centers in cadmium borate glasses.—73-00379
Nature of paramagnetic centers in tin dioxide.—73-17178
New $As_{Ga}$-related center in GaAs.—73-15054
Paramagnetic centers in glasses and glass-ceramics induced by simulated space irradiation.—73-06951
Photoelectrically active and inactive slow electron trapping centers in ZnSe crystals.—73-11376
Photoinduced formation of surface recombination centers in GaAs.—73-04438
Role of bulk deep centers in the generation of the surface photo-emf in low-resistivity ZnSe single crystals.—73-07775
Time-resolved low-temperature luminescence of nonbridging oxygen [NBO] hole centers in silica glass.—73-00567

**centrifuges,**
Centrifugal casting of ceramics. Properties of the castings.—73-12015
Process for controlling the temperature of a fiber centrifuger.—73-05005

**ceramic industry,**
1992—a year of improvements for the ceramic industry.—73-13632
Advanced ceramics in The Netherlands.—73-06554
American fair.—73-17461
Big name in ceramics: Villeroy & Boch.—73-17463
Ceramics center indigenous to Okayama [Japan].—73-03385
Cevisama: the new face of Spain.—73-17466
Comparison between Italy and Spain.—73-17467
Conditions in the glass, ceramics, and porcelain sector from the year 1993 to its privatization.—73-06563
Development and prospects of China's ceramic machinery.—73-12130
EEC finances energy saving.—73-17475
Energy efficiency in the ceramic industry.—73-17476
Fin Riwal: a world group.—73-17478
Forty years of development of ceramics in France (1950-1990).—73-06569
France is an open market.—73-17480
Germany's ceramic industry after unification.—73-03393
Green [environmentally conscious] ceramics manufacturing.—73-17485
Innovative strategies for the ceramic machinery industry.—73-17489
Laufen: a Swiss multinational.—73-17492
New materials—Western Australia.—73-06584
New technologies for the rational use of energy in the ceramic industry.—73-04935
New technologies for the rational use of energy in the ceramics industry.—73-04936
Programming management control.—73-17500
Robert L. Coble: a retrospective.—73-06592
South African ceramic developments.—73-05181
Spotlight on Acimac.—73-17503
Structure of the Italian ceramic machinery industry.—73-17504
Successful Ceramitec.—73-17505
Technical standards and [the] ceramic industry.—73-17506
Tecnargilla expanding.—73-17507
Turkey: a rapidly expanding market.—73-17509

**ceramic matrix composites,**
Acoustic microscopic characterization of fiber/matrix interface of SiC fiber-reinforced reaction-bonded $Si_3N_4$ matrix composites.—73-12102
Aspects of residual thermal stresses in continuous-fiber-reinforced ceramic matrix composites.—73-08810
Aspects of the morphology and creep behavior of a unidirectional $SiC_f$-MLAS material.—73-06326
Behavior of ceramic matrix fiber composites under longitudinal loading.—73-03240
Breaking down the barriers for ceramic matrix composites (CMC's).—73-02003
BSG-doped CMC's for thermal durability.—73-10500
Ceramic matrix composites by microwave-assisted CVI.—73-05700
Ceramic matrix composites.—73-05158
Ceramic Matrix Composites.—73-06600
Ceramic Transactions, Volume 38: Advances in Ceramic-Matrix Composites.—73-13652
Characterization of ceramic matrix composite tubes at ambient and elevated temperatures.—73-17246
Characterization of damage onset in glass-ceramic matrix composites angle-ply laminates.—73-03244
Characterization of subsurface damage in ceramic matrix composites by confocal scanning laser microscopy.—73-03125
Characterization of the performance of 1-3 type piezocomposites for low-frequency applications.—73-01394
Crack growth behavior of $SiC_f$/SiC composite at room and high temperatures.—73-17258
Crack growth resistance model for fiber-reinforced ceramic materials.—73-06349
Delamination, fiber bridging, and toughness of ceramic matrix composites [CMC's].—73-06370
Development of oxide coatings for matching oxide fiber–oxide matrix composites.—73-16706
Direct electrical heating of ceramic matrix composites to determine tensile-stressed oxidation properties.—73-12132
Effect of fiber coating on mechanical properties of Nicalon fibers and Nicalon fiber/SiC matrix composites.—73-17284
Effect of fiber coating thickness on the interfacial properties of a continuous fiber ceramic matrix composite.—73-17285
Effect of fiber fractures on the frictional heating in a uniaxially fiber-reinforced ceramic matrix composite.—73-09575
Effect of interfacial properties on fracture toughness in fiber-reinforced ceramic composites.—73-03267
Effect of intergranular phase on mechanical properties of $Si_3N_4$-$Si_2N_2O$ composites.—73-03268
Effect of processing and fiber coating on fiber-matrix interaction in mullite fiber–mullite matrix composites.—73-09090
Effect of specimen shape on fracture toughness and effective fracture energy in SiC-SiC composite.—73-15793
Effects of density and fiber volume on the mechanical properties of SiC matrix composites reinforced with T-300 fibers.—73-12427
Effects of matrix microcracking on the oxidation behavior of carbon-fiber/glass-matrix composites.—73-07019
Effects of residual stress and frictional sliding on *R*-curve behavior in fiber-reinforced ceramics.—73-06398
Effects of weave geometry on properties of Nicalon-reinforced ceramic matrix composites.—73-13037
Electrophoretic deposition to synthesize advanced ceramic/ceramic laminar composites.—73-09116
Elevated-temperature cyclic fatigue of silicon carbide fiber-reinforced silicon carbide matrix composites.—73-17304
Evaluation of interfacial properties of fiber-reinforced ceramic composites using fiber push-in tests.—73-09593
Fabrication of SiC matrix surface composites by chemical vapor infiltration with microwave heating: temperature effects.—73-16776
Failure statistics of an oxide-oxide ceramic composite.—73-17317
Formation of high-temperature structural ceramics and ceramic matrix composites by the oxidation of solid metal-bearing precursors.—73-16789
Fraction and fatigue of a Nicalon/CAS continuous-fiber-reinforced glass-ceramic matrix composite.—73-03295
Fracture and flexural characterization of monolithic SiC and $SiC_w$/SiC composites at room and elevated temperatures.—73-17324
FRCMC's: a sample preparation challenge.—73-08401
Generic model for creep rupture lifetime estimation on fibrous ceramic composites.—73-06445
High-temperature plasticity effects in bridged cracks and subcritical crack growth in ceramic composites.—73-09611
High-temperature treatment of carbon fiber/ceramic composites prepared for borosiloxane.—73-13088
Hybrid matrix composites reinforced with carbon fibers via polymer pyrolysis.—73-02853
Implications of fiber stress rupture on lifetimes of ceramic matrix composites.—73-17351
In situ fiber strengths in ceramic matrix composites from fracture mirrors.—73-09617
In situ formation of boron nitride interfaces on Nextel 312 continuous ceramic fiber: I, Nitriding process and Blackglas ceramic matrix composite properties.—73-17353
In situ formation of boron nitride interfaces on Nextel 312 continuous ceramic fiber: II, Oxidation of Blackglas ceramic matrix composites.—73-17354
In situ formation of metal-ceramic microstructures, including metal-ceramic composites, using reduction reactions.—73-03599
In-plane shear properties of 2-D ceramic matrix composites.—73-17355
Indentation behavior of continuous fiber-reinforced ceramic matrix composites.—73-00502
Industrial minerals as strengthening agents in ceramic matrix composites.—73-09170
Intermittent carbon coatings for application in ceramic matrix composites.—73-08533
Knitted fiber-reinforcing material.—73-03687
Knowledge-based decision support systems for rapid and efficient production planning in CMC fabrication.—73-15733
Life Prediction Methodologies and Data for Ceramic Materials (ASTM Special Technical Publication 1201).—73-17531
Load ratio effects on the fatigue behavior of silicon carbide fiber-reinforced silicon carbide.—73-17373
Low-temperature deposition of silicon nitride coatings on fibers for CMC's.—73-16852
Low-temperature processing of ceramic woven fabric/ceramic matrix composites.—73-05902
Making ceramic composites by melt infiltration.—73-09195
Material response of diboride matrix composites to low-pressure-simulated hypersonic flows.—73-12435
Mechanical behavior of a 3-D braided, continuous SiC fiber-reinforced/CVI SiC matrix composite at ambient and elevated temperatures.—73-17379
Mechanical properties of a laser-cut alumina matrix-silicon carbide whisker composite.—73-09632
Mechanical properties of chemically vapor infiltrated ceramic matrix composites.—73-17383
Mechanical properties of Nextel 312 fiber-reinforced SiC matrix composites in tension.—73-17387
Method for fabrication of continuous-fiber-reinforced ceramic matrix composites.—73-16866
Method for making ceramic matrix composites.—73-04986
Methodology for relating the tensile constitutive behavior of ceramic matrix composites [CMC's] to constituent properties.—73-13571
Methods for reliable measurements of thermal transport properties of ceramic matrix composites.—73-08413
Microcracking stress and transverse properties of hybrid ceramic matrix composites.—73-17398
Micromechanical analysis of damage mechanisms in ceramic matrix composites during mechanical and thermal cycling.—73-03340
Microstructural analysis using image analysis.—73-09476
Microstructural evolution in whisker-reinforced SiC-SiC composites.—73-09478
Microstructural study comparing CFCMC's [continuous fiber ceramic matrix composites] with differing mechanical properties.—73-17156
Microstructure of silicon carbide fiber-reinforced silicon carbide ceramic matrix composites heat-treated in vacuo and in pure oxygen.—73-03174
Microwave sintering of hydroxyapatite-based composites.—73-05923
Modeling of strength in SiC/SiC composite systems.—73-17401
Modeling the stress-strain behavior of unidirectional ceramic matrix composite laminates.—73-09653
Molybdenum palladium fiber matrix interlayers for ceramic composites.—73-13875
Monitoring damage growth in titanium matrix composites [TMC's].—73-12167
Multifunctional ceramics for thermal shock applications.—73-03626
Multiple matrix cracking in brittle matrix composites.—73-06494
New development of the *J*-based fracture testing technique for ceramic matrix composites [CMC's].—73-12172
New model for evaluation of the interfacial friction coefficient and residual clamping stress in a fiber-pushout test.—73-08924
Oxidation of carbon in fiber-reinforced ceramic matrix composites.—73-17233
Potential qualities of pitch-based carbon fiber for high-temperature composites.—73-17410
Preparation techniques for analysis of fiber-reinforced ceramic matrix composites.—73-08435
Pressureless densification of ceramic matrix composites: analytical model.—73-05990
Probabilistic failure predictions in ceramics and ceramic matrix fiber-reinforced composites.—73-17416
Processing and mechanical properties of $Si_3O_4$-SiC whisker–TiN system composite material.—73-05995
Production of ceramic matrix composites by CVI and DMO [directed metal oxidation] for industrial heating industry.—73-06001
Recent developments in ceramic materials processing and applications.—73-15932
Reinforcements for ceramic matrix composites for elevated-temperature applications.—73-09662
Relationship between bending strength and tensile strength.—73-09663
Size effect in fracture of ceramic-ceramic composite materials.—73-06522
Strength versus gauge length in ceramic matrix composites.—73-09677
Stress corrosion cracking in a unidirectional ceramic-matrix composite.—73-06531
Subcritical crack growth in continuous-fiber-reinforced ceramic composites.—73-09679
Tensile behavior of ceramic/ceramic composites before and after exposure to high-temperature combustion environment.—73-17440
Theoretical study of the effect of initial flaw size on the proportional limit.—73-09374
Thermal aging effects in oxide/oxide ceramic matrix composites.—73-13602
Titanium matrix composites for NASP airframe usage.—73-10290
Transverse cracking in a fiber-reinforced ceramic matrix composite.—73-06543
Ultimate tensile strength of metal and ceramic matrix composites.—73-06547

Whisker-matrix interfacial reactions in SiC, $Si_3N_4$, and $Al_{18}B_4O_{33}$ whisker-reinforced aluminum-matrix composites.—73-13910
Work hardening behavior of alumina particulate-reinforced 2024 aluminum alloy matrix composites.—73-13911
**ceramic-metal systems,**
Abrasion protective and thermal dissipative coating for jet engine components leading edges.—73-10299
Advanced thermal barrier coated superalloy components.—73-03669
Alumina ceramic-metal articles.—73-03670
Articles including a ceramic member and a metal member bonded together.—73-03671
Bonding, structure, and properties of metal/ceramic interfaces.—73-00211
Ceramic articles with a modified metal-containing component and methods of making [the] same.—73-03674
Ceramic composite coating material.—73-10305
Ceramic-metal composite substrate and method for producing the same.—73-03675
Ceramic-metal interfaces brazed with Al-base alloys.—73-03563
Coated metal article.—73-03677
Combined body of ceramics and metal.—73-03679
Combustion synthesis of TiC-$Al_2O_3$-Al and TiC-$Al_2O_3$-Ti ceramic-metal composites.—73-05713
Deposition process of a ceramic coating on a metallic substrate.—73-10309
Experimental observation of the failure mechanisms of metal/ceramic interfaces under mode I loading.—73-13835
Finite element analysis of thermal residual stresses at graded ceramic-metal interface: I, Model description and geometrical effects.—73-06791
Finite element analysis of thermal residual stresses at graded ceramic-metal interfaces: II, Interface optimization for residual stress reduction.—73-06792
Fracture resistance of metal-ceramic interfaces.—73-13838
Heat-resistant materials.—73-10315
High-temperature turbine engine structure.—73-10318
In situ formation of metal-ceramic oxide microstructures.—73-00283
Infiltrated fiber-reinforced metallic and intermetallic alloy matrix composites.—73-03685
Influence of crystallography and oxide and metallic types on the structure and properties of metal-ceramic interfaces.—73-13845
Interface science of controlled metal/metal and metal/ceramic interfaces prepared using ultrahigh vacuum diffusion bonding.—73-00244
Laser welding process for attaching metal to ceramic substrate.—73-10320
Mechanically retained wear-resistant ceramic pad.—73-10321
Metallographic and fracture surface investigations of metal-ceramic bicrystals.—73-06825
Method for forming a surface coating using powdered solid oxidants and parent metals.—73-03689
Method for increasing the wettability of aluminum metal to alumina-containing fibers.—73-10325
Method for producing self-supporting ceramic bodies with graded properties.—73-03691
Method for protecting articles from hydrogen absorption by application of an alumina coating.—73-03692
Method for repair and restoration of a ceramic thermal-barrier-coated substrate by providing an intermetallic coating.—73-03693
Method of forming ceramic layer on metallic body.—73-10327
Method of forming tappet of the kind having ceramic seat plate.—73-03694
Method of making a gas turbine blade having a duplex coating.—73-03695
Method of making a shaped part comprising a metallic member and a ceramic member.—73-10328
Moldable composition, process for producing sintered body therefrom, and products from [the] same.—73-10333
Multilayered, cofired, ceramic-on-metal circuit board for microelectronic packaging.—73-04225
Numerical modeling of residual stresses in graded ceramic-metal joints.—73-03630
Preparation of ceramic-metal coatings.—73-13921
Process for forming protective base coatings on metals.—73-00295
Reliability factors in ceramic/metal joining.—73-00264
Sintered ceramic-metal composite product and method of fabricating the same.—73-10350
Stress-corrosion cracking at ceramic-metal interfaces.—73-00268
Thermally protective composite ceramic-metal coatings for high-temperature use.—73-10354
Transient liquid phase ceramic bonding.—73-00302
Wetting, adhesion, and electronic structure of metal/ceramic interfaces: a comparison with metal-semiconductor Schottky contacts.—73-03667
Zirconium oxide and nitride coated cardiovascular implants.—73-03705
**ceramics,**
Application of ceramic fiber to reheating furnace for hot strip mill.—73-00775
Application of thermal analysis in modern ceramic technology.—73-01885
Article of ceramic material and production thereof.—73-01846
Aspects in grinding of ceramics.—73-16658
Block gage and method of making ceramic material.—73-04960
Ceramic bonding method.—73-00279
Ceramic building block.—73-15935
Ceramic circuit board with a curved lead terminal.—73-14743
Ceramic conveyor belt.—73-15939
Ceramic guide pin.—73-05201
Ceramic hollow bodies and method of manufacturing such bodies.—73-04962

Ceramic tools stand up to composites.—73-05159
Ceramic/distillable binder compositions.—73-12350
Ceramics decoration and environmental protection.—73-00897
Ceramics in the equipment for metal transformation—interest in an electroerodable ceramic material.—73-02006
Deformation energy of Kelvar backing plates for ceramic armors.—73-12763
Designing an extruder with allowance for the properties of ceramic extrusion compounds: III.—73-12021
Designing an extruder with allowance for the properties of ceramic extrusion compounds: IVb.—73-12125
Dictionary of Ceramic Science and Engineering, Second Edition.—73-17525
Double-layered ceramic heater.—73-15940
Electricity potential in the ceramics industry.—73-13616
Faculty of the Glass and Ceramic Machines of the Machine and Textile Institute [Liberec, Czech Republic].—73-15725
Forming principles and manufacturing limits for the production of ceramic tapes.—73-12029
Forty years of ceramic development in France 1950-1990.—73-13621
Forty years of ceramic technology and development.—73-13622
Functional classification of vitreous, vitrocrystalline, and ceramic materials.—73-03392
Fundamentals of bonding ceramic materials to metals.—73-13840
Generation and propagation behavior of laser-induced thermal cracks.—73-16500
High-pressure discharge lamp with ceramic vessel.—73-05217
Materials Science Monographs, Volume 80: Structure and Properties of Ceramics.—73-17532
Mechanical activation of solid-state reactions by grinding and its importance for production of high-technology ceramics[—literature review].—73-13130
Method of manufacture of a contact guide.—73-04996
Mixing in the ceramic industry—an introduction into theory+practice.—73-12046
NACSIS-IR database for academic conferences of the Ceramic Society of Japan.—73-09730
New routes for fabricating ceramic materials.—73-13150
Nonmetallic raw materials in former East Germany.—73-01990
Nonthermal builtup granulation as an alternative to spray-dry particle method.—73-01804
Present status and development of high-technology ceramics in Russia.—73-13636
Problems in producing a thermally stable, high-strength, heat-resistant ceramic.—73-08520
Quasi-isostatic pressing for the production of ceramics.—73-01824
Relationships between toughening mechanisms of ceramics.—73-17420
Role of surfactants in concrete and ceramic fields.—73-00186
Silver chemical coating on ceramics.—73-00266
Sintering of ceramic bodies containing glass.—73-00924
Strength of ceramic structural parts under multiaxial loading.—73-13594
Synthesis of lithium aluminate, mullite, and colored zirconia by a combustion process.—73-09360
Ten years of experience with thermoanalyses.—73-12203
Three decades of expanding decorating horizons.—73-03425
**cerates,**
Influence of $Nd_2O_3$ doping on the reaction process and sintering behavior of $BaCeO_3$ ceramics.—73-16837
**ceria,**
Anisotropy of deposition rate in magnetron sputtering of $CeO_2$.—73-02726
Ce 3*d* and Zr 3*d* X-ray photoelectron spectroscopy spectra of $ZrO_2$-12 mol% $CeO_2$ after heat treatments and $Ar^+$ etching.—73-08565
$CeO_2$ films deposited by dc reactive magnetron sputtering.—73-02736
Characterization and optimization of cerium dioxide films deposited by rf magnetron sputtering.—73-12938
Chemical and electrical properties of Yb-doped strontium cerates in coal combustion atmospheres.—73-02560
Coloration in ceria-doped zirconia induced by reduction heat treatment.—73-08824
Comparative model study of antimony and cerium oxide refining.—73-00599
Destabilization behavior of ceria-stabilized tetragonal zirconia polycrystals by sodium sulfate and vanadium oxide melts.—73-08596
Developments in highly toughened $CeO_2$-$Y_2O_3$-$ZrO_2$ ceramic system.—73-02772
Diffusionless tetragonal–cubic transformation temperature in zirconia–ceria solid solutions.—73-02237
Effect of yttria and ceria on mechanical properties and oxidation behaviors of α-SiAlON ceramics.—73-17296
Effects of long-range forces on oxygen transport in yttria-doped ceria: simulation and theory.—73-13349
Elastic modulus and fracture toughness of $CeO_2$-containing tetragonal zirconia polycrystals.—73-17302
Electric conductivity of $CeO_2$-$Ta_2O_5$ ceramics in an atmosphere of combustion products and in air.—73-05553
Electrochemical liquid deposition [ELD] of ceria.—73-16758
Epitaxial $CeO_2$ buffer layers for $YBa_2Cu_3O_{7-\delta}$ films on sapphire.—73-08062
Exploring the feasibility of producing $CeO_2$-SrO-based solid electrolytes.—73-00968
Grain-boundary modification of ceria-stabilized tetragonal zirconia polycrystals by a small amount of alumina addition.—73-09151
Hartree-Fock periodic study of bulk ceria.—73-05413
High-temperature Hall measurements on cerium dioxide thin films.—73-11249
Influence of substrate temperature on the properties of argon-ion-assisted deposited $CeO_2$ films.—73-12816
Kinetics of $CeO_2$ surface area reduction in a mixture of HCl, $H_2O$, and $O_2$.—73-13414
Large-area epitaxial $CeO_2$ buffer layers on sapphire substrates for the growth of high-quality $YBa_2Cu_3O_7$ films.—73-04752
Low-temperature oxidation and reduction of ceria particles on Rh(111).—73-06816
Low-temperature phase equilibria by the flux method and the metastable-stable phase diagram in the $ZrO_2$-$CeO_2$ system.—73-12623
Magnetic properties of $xCeO_2$–$(1-x)(3B_2O_3$·*PbO) glasses*.—*73-00512*
Mechanical properties of low-temperature sintered ceria-stabilized tetragonal zirconia polycrustals: III, Thermal shock resistance.—73-13564
Mechanical properties of low-temperature sintered ceria-stabilized tetragonal zirconia polycrystals: II, Fracture toughness.—73-13565
Mechanical properties of yttria- and ceria-doped zirconia ceramics.—73-03339
Mechanism of diffusion and ion transport of chloride ions on hydrous ceric oxide.—73-06167
Microdomains in urania-yttria and urania-ceria.—73-01753
Mixing effects in $CeO_2$/$TiO_2$ and $CeO_2$/$SiO_2$ systems submitted to $Ar^+$ sputtering.—73-05437
Opacified enamel for direct-on enameling on unpickled steel plate.—73-10334
Optical properties of ion-assisted-deposited $CeO_2$ films.—73-02653
Optical properties of $TiO_2$, $Y_2O_3$, and $CeO_2$ thin films deposited by electron beam evaporation.—73-02655
Physical properties and output characteristics of piezoelectric transformer of Pb(Mg, Te, Mn, Nb)$O_3$-PZT ceramics with addition of $CeO_2$.—73-11597
Preliminary consideration of the growth behavior of $CeO_2$, $SrTiO_3$, and $SrVO_3$ films on Si substrate.—73-05955
Preparation of $Y_2O_3$-doped $CeO_2$ ceramic for pH electrode.—73-10985
Preparation of $Y_2O_3$-doped $CeO_2$ ceramics for pH electrode.—73-01015
Properties of $CeO_2$ and $CeO_{2-x}$ films: II, High-temperature properties.—73-12868
Protonic and oxide ionic conduction in $BaCeO_3$-based ceramics: effect of partial substitution for Ba in $BaCe_{0.9}Nd_{0.1}O_{3-\alpha}$ with Ca.—73-04156
Raman scattering study of cubic-tetragonal phase transition in $Zr_{1-x}Ce_xO_2$ solid solution.—73-08717
Role of defect interaction in boundary mobility and cation diffusivity of $CeO_2$.—73-17098
Superconductive articles including cerium oxide layer.—73-04880
Synthesis and study of $CeO_2$-$V_2O_5$ ceramic pigment.—73-10900
Synthesis of metastable tetragonal (*t'*) zirconia-ceria solid solutions by the polymerized complex method.—73-17040
Systematic examination of hydrogen ion conduction in rare-earth-doped barium cerate ceramics.—73-01033
Thermal diffusivity of plasma-sprayed coatings of $ZrO_2$ with 8 wt% $Y_2O_3$ and $ZrO_2$ with 25 wt% $CeO_2$.—73-02707
Thermal stability of nanostructured titania and titania-ceria ceramic powders prepared by the sol-gel process.—73-17057
Thermodynamic properties of cerium oxalate and cerium oxide—comment.—73-16377
Transmission electron microscopy characterization of a ceria-fluxed silicon nitride.—73-03209
Ultraviolet absorbing, green-tinted glass.—73-00764
Zirconia-, yttria-, and ceria-based ceramics with high electrical conductivity.—73-10999
**cerium,**
Anion transport in $Ba_{0.5}Ce_{0.5}F_{2.5}$ single crystal with spatially oriented fluctuations of composition.—73-17072
Body of cerium-doped quartz glass.—73-00726
Cerium silicide formation in thin Ce-Si multilayer films.—73-02738
Characteristics of holographic memory and phase conjugate of Ce:Fe:$LiNbO_3$ crystal.—73-02557
Characterization of three-dimensional through-thickness transformation zone in 9-mol% Ce-TZP ceramics.—73-17247
Crystal structure of gadolinium- and yttrium-doped barium cerate.—73-12561
Effect of iron on formation of color centers in cerium-containing silicate glasses.—73-00457
Effects of cerium doping on the resistivity of PTCR barium lead titanate.—73-07468
Grain growth kinetics in alumina–zirconia (CeZTA) composites.—73-09457
Influence of surface charge on the cathodoluminescence of Ce:YAG.—73-02620
Magnetism and electron transport properties of mixed valence $CeMn_{2-x}Si_{2+x}$ crystals [$(0.1 \le x \le 0.25)$].—73-16533
Mechanical properties of low-tempeature-sintered Ce-TZP: I, Bending strength and Weibull modulus.—73-03335
New phosphide $CeNi_{5-x}P_3$ ($x$=0, 1) and its crystal structure.—73-16227
NMR of Cu and Pr in the two-phase compound $Pr_{1.85}Ce_{0.15}CuO_{4-y}$.—73-05440
Optical reflectivity spectra of incommensurate layer compounds, $(CeS)_{1.2}NbS_2$ and $(CeS)_{0.6}NbS_2$.—73-08936

Partially stabilized $ZrO_2$-based laminar ceramic composites.—73-12391
Phase equilibria in the system $CePO_4$-$Na_3PO_4$.—73-02381
Phase relations in the system $Ce_2O_3$-$Al_2O_3$ in inert and reducing atmospheres.—73-16256
Phase relations in the system $Ce_2O_3$-$Ce_2Si_2O_7$ in the temperature range 1150° to 1970°C in reducing and inert atmospheres.—73-16257
Plasticity-induced fatigue damage in [12 mol%] ceria-stabilized tetragonal zirconia polycrystals.—73-17408
Point-contact spectroscopy of $La_{1-x}Ce_xB_6$.—73-08703
Preparation of ultrafine ceria-stabilized zirconia particles coated with yttria.—73-09272
Processing and microstructure of a Ce-doped in situ O´+β´-SiAlON composite.—73-16950
Stress-strain characteristic of Ce-TZP ceramics under compression.—73-06533
Synthesis and structure of cerium titanates in films.—73-02491
Synthesis of a new compound, $Ca_{0.8}Ce_{1.2}Sn_2O_7$, with pyrochlore structure.—73-03040
Temperature dependence of penetration depth and surface resistance of $Nd_{1.85}Ce_{0.15}CuO_4$.—73-16610
Temperature dependence of point-contact spectra for $Ag:Nd_{1.85}Ce_{0.15}CuO_{4-\delta}$.—73-08246

**cermets,**
Abrasive wear rates of certain ceramics and cermets relative to their microhardness and fracture toughness.—73-09540
Active wear mechanisms in a titanium-based cermet when machining steels.—73-03560
Application of silica sol to permeable cermet.—73-06738
Cause of formation of pores in titanium-carbide-based cermet with the addition of zirconium carbide.—73-13804
Cermet surface-distributive heaters based on nickel-titanium powder.—73-00214
Creep characteristics of TiC-$Mo_2C$-Ni cermet sintered after nitrification in the course of raising temperature.—73-06763
Film thickness effects on the optical and electrical properties of Cu-$GeO_2$ thin cermet films.—73-06790
Friction and wear characteristics of $B_4C$-$TiB_2$ ceramics and $Mo_2FeB_2$-Fe-type cermets.—73-13839
High neutron absorbing refractory compositions of matter and methods for their manufacture.—73-03684
Influence of morphology on the optical properties of nanocermets and granular inhomogeneous media.—73-13847
Influence of the deposition conditions on the optical, electrical, and magnetic properties of sputtered Fe-$Al_2O_3$ and Ni-$Al_2O_3$ nanocermet films.—73-10239
Long-lasting thermocouple for high-temperature measurements of liquid metals, mattes, and slags.—73-00285
Mechanism of reaction sintering of iron–iron boride cermets.—73-06822
Nickel cermet, and process for preparing it.—73-03698
Relation between microstructures and cutting performance of titanium-carbide-based cermet containing nitrogen.—73-06850
Stability of cermet coatings and their dependence on the distribution of elements.—73-00267
Surface-coated cermet blade member.—73-10353
TiC-base cermet alloy.—73-00300
Titanium-carbonitride-based cermets: processes and properties.—73-06867
Toughening of Ni-bonded $Cr_3C_2$ by Mo particulates.—73-10291

**cesium,**
Acoustic study *p-T* phase diagram of $Cs_2HgCl_4$ crystals.—73-16026
Anisotropy of low-temperature vibrational characteristics illustrated by example of thermal conductivity of ferroelastic $CsDy(MoO_4)_2$.—73-16032
Anomalous behavior of ultrasonic velocity in cesium borate glasses.—73-10418
Anomalous paraelectric behavior of hydroxyl ion in a cesium bromide crystal.—73-08552
Cesium on GaP(110) surfaces: a confirmation of the metal-induced gap states-plus-defects model.—73-11095
Crystal structure of $Cs_3Nd(MoO_4)_3$.—73-02193
Crystal structure of ferroelastic phase II of $Cs_3H(SeO_4)_2$.—73-02194
Crystal structure of the cesium bronze $Cs(Mo_{0.95}W_{0.05})_7O_{21}$.—73-02215
Defect-induced smoothing of the superionic phase transition in $Cs_{1-x}M_xHSO_4$ protonic conductors: I, Potassium substitution.—73-03086
Defect-induced smoothing of the superionic phase transition in $Cs_{1-x}M_xHSO_4$ protonic conductors: II, Lithium substitution.—73-03087
Defect-induced smoothing of the superionic phase transition in $Cs_{1-x}M_xHSO_4$ protonic conductors: III, Rubidium substitution.—73-03088
Eigen luminescence of $CsMgCl_3$ single crystals.—73-02592
Fusibility diagram of the system $CsPO_3$-$Ga(PO_3)_3$ and the properties of the compound $CsGa(PO_3)_4$.—73-16160
High-temperature phase transitions in $CsDy(MoO_4)_2$.—73-02283
High-temperature synthesis of $CsAlSiO_4$-ANA, a new polymorph in the system $Cs_2O$-$Al_2O_3$-$SiO_2$: I, The end member of ANA type of zeolite framework.—73-02284
Lattice dynamics and specific heat of layered $CsDy(MoO_4)_2$ crystals.—73-16193
Magnetooptic channel waveguides in Ce-substituted yttrium iron garnet.—73-11665
Manifestations of periodic superstructure in $CsDy(MoO_4)_2$.—73-16209
Neutron diffraction refinement of structure of nonlinear optical crystal of $Cs_2UO_2Cl_4$.—73-01755
Peculiarities of low-temperature lattice dynamics of layered crystals $CsR(MO_4)_2$ (R=Dy,Gd).—73-08689
Pollucite via low-temperature reaction of glassy frits.—73-14461
Radiative and nonradiative decay of electronic excitations in CsCl crystals.—73-17096
Rf microwave dielectric relaxation and conductivity in $Cs_{1-x}M_xHSO_4$ disordered protonic conductors.—73-01021
Structural changes in isostoichiometric family of $Cs_2[Ln(NO_3)_5(H_2O)_2]$ [Ln=La, Ce, Nd].—73-02447
Structure phase transitions in $CsDy(MO_4)_2$.—73-08761
Symmetry of the unoccupied states in Cs graphite intercalation compounds by X-ray absorption.—73-02474
Synthesis and properties of the cuprates of cesium and sodium.—73-02488
Thermal decomposition of the cesium ferrate(VI).—73-12719
Thermostimulated luminescence of CsI:Na crystals with different contents of the activator in the region of destruction of $Na^0$ centers.—73-02715
Three-dimensional/one-dimensional transition in the $Cs^+$ sublattice of the mixed valence $CsTi_8O_{16}$ hollandite: structures at 297 K and 673 K.—73-02527
Ultrasonic velocity in cesium borate glasses.—73-00571
X-ray photoemission spectroscopy studies of cesium and oxygen on GaAs(100).—73-07865
X-ray study of the ordering behavior in the low-temperature phase of $Cs_3D(SeO_4)_2$.—73-08795

**chalcogenides,**
$^{19}F$ nuclear magnetic resonance investigation of the glass $[(Ga_2S_3)_{0.25}\cdot(GeS_2)_{0.75}](NaF)_{0.25}$.—73-13986
Absorption edge structure of cubic cadmium and zinc chalcogenides.—73-14764
Assessment of the average coordination number concept in multicomponent, isostructural chalcogenide glasses.—73-13928
Cadmium chalcogenide semiconducting thin films prepared by electrodeposition from boiling aqueous electrolytes.—73-11088
Calorimetric and morphological study of the crystallization process in some chalcogenide glasses.—73-13932
Chalcogenide glasses of the system Ag-Cu-As-Se investigated by differential thermal analysis.—73-14140
Characteristics and new capabilities of intercalated chalcogenide semiconductors.—73-07403
Corona discharge-stimulated transverse diffusion of silver in glassy As-Se films.—73-00603
Crystallization of doped chalcogenide glasses.—73-13953
Degrees of freedom and ionic mobility in silver chalcogenide glasses.—73-00318
Determination of zinc, cadmium, and lead during investigation of nonstoichiometry of chalcogenides of metals.—73-12129
Direct observation of medium-range order in glasses by means of electron field emission.—73-13961
Effect of external action on the optical loss from fiber light guides made of chalcogenide glass.—73-00455
Effect of uniaxial compression on phase transitions in the ferroelectrics $Sn_2P_2S_6$ and $Sn_2P_2Se_6$.—73-15257
Electrical and optical studies in some Bi-doped amorphous chalcogenide thin films.—73-07482
Electron and hole energy spectrum parameters of cubic cadmium and zinc chalcogenides.—73-14878
Electron density distribution in $CdCr_2S_4$ and $CdCr_2Se_4$ crystals: precise X-ray diffraction study.—73-02254
Folded acoustic phonons [observed] by Raman scattering in amorphous chalcogenide superlattices.—73-08625
Glass formation and some properties of the Ge-As-Se-Te glasses and amorphous films in a region with Te contents [of] 45–70 at.%.—73-14195
Glass phases based on the Se-S-X (X=Cu, Zn) system.—73-00347
Growth of tellurium oxychalcogenide single crystals.—73-16163
Infrared chalcogenide optical fibers.—73-00505
Interaction of components in fluorochalcogenide vitreous systems.—73-14013
Intrinsic and photoinduced elliptical dichroism and birefringence in chalcogenide glasses.—73-14212
Luminescence and Raman light scattering in some I-III-$VI_2$ crystals and their solid solutions.—73-16204
Model of the Nernst-Ettinghausen effect in chalcogenide glasses.—73-01247
Natural and photoinduced optical activity of chalcogenide glasses.—73-00518
New arguments for off-center position of tin atoms in $Pb_{1-x}Sn_xTe_{1-y}Se_y$ and $Pb_{1-x}Sn_xTe_{1-y}S_y$.—73-16548
New chalcogenide glass with conductivity due to copper ions.—73-14233
Nonlinear Fabry-Perot cavity with chalcogenide glass thin films.—73-07056
Nonmetallic glasses prepared by melt spinning method: glass formation, properties, anomalies.—73-14442
Optical and magnetooptical properties of $HgCr_2X_4$ (X=S, Se) single crystals.—73-16552
Optical bistability and photoinduced quenching of light scattering in bulk chalcogenide glasses under sub-band-gap excitation.—73-15070
Origin of photostructural changes in chalcogenide glasses.—73-14062
Peculiar behavior of carrier effective mass and lifetime in $CuCr_2S_{2.5}Se_{1.5}$ ferromagnetic semiconductor with strong *s-d* interband exchange.—73-15085
Photoinduced anisotropy and gyrotropy in chalcogenide glasses.—73-14247
Photostructural transformations in chalcogenide glassy semiconductor films by photoelectron spectroscopy.—73-01284
Pulsed vacuum uv irradiation of AsSe and $As_2S_3$ glassy chalcogenide semiconductor films.—73-04458
Self-limiting growth of zinc chalcogenides and their superlattices.—73-04476
Size-quantized semiconductor cadmium chalcogenide particles in Langmuir-Blodgett films.—73-07801
Stabilization and thermoelectric properties of rare-earth chalcogenides γ-$LaS_x$.—73-08740
Structural stability of chalcogenide glasses in submicron multilayer films.—73-14100
Structure formation in Cd chalcogenide films produced from atomic-molecular beams.—73-15187
Third-order nonlinear optical properties of $As_2S_3$ chalcogenide glass.—73-07091
Transport processes in chalcogenide glasses of silver-copper-arsenic-selenium system.—73-00569
Tunnel state parameters in lead chalcogenides.—73-16386
Vibrational resonance Raman spectra and the valence force field of iridium dichalcogenides $IrS_2$ and $IrSe_2$.—73-02538
X-ray study of $TlGaSe_2$ and $TlInS_2$.—73-01367

**chalcopyrite,**
Transport properties of $CuInS_2$, $CuInSe_2$, and $CuInTe_2$ thin films.—73-09426
Valence manipulation and homojunction diode fabrication of chalcopyrite structure Cu-In-Se thin films.—73-04508

**chamotte,**
History of chamotes: 1950-1990.—73-12280

**characterization,**
Ceramic surface preparation—microscopy analysis.—73-05023
Characterization of Ceramics.—73-13653
Characterization of pulsed-laser-deposited zinc oxide.—73-13377
Characterization techniques and properties of nonaqueous magnetic colloids.—73-07927
Characterization techniques for agglomerate structures.—73-08380
Light scattering: a basis of effective particle characterization techniques.—73-15811
Particle size analysis by laser diffraction.—73-05077
Plasma characterization and process control diagnostics.—73-09240
Preliminary study and laboratory characterization of the Carpentier pyrophyllite mineral.—73-05145
Rheology: a versatile materials characterization technique.—73-12189
Science and the art museum: the analysis of archaeological materials.—73-09795
Surface characterization.—73-08447
Synthesis and characterization of titanium pillared clays: influence of the temperature of preparation.—73-03038
Temperature-programmed desorption [TPD] as a surface characterization method of ceramic powders.—73-08448
Thermal analysis for characterization of ceramic materials.—73-12204
Thermal wave photopyroelectric characterization of advanced materials: state of the art.—73-08450
Ultrasonic characterization of green and sintered ceramics: I, Time domain.—73-12206
Vickers indentation method applied to the characterization of ceramic glazes.—73-08459

**charge density wave,**
CDW suppression and photoinduced gap states in $BaBiO_3$.—73-02156
Damping of CDW's in $NbSe_3$.—73-07433
Raman spectroscopic study of $K_{0.3}MoO_3$ in charge density wave (CDW) states.—73-05467
Sliding motion of CDW in quasi-2-D ν-$Mo_4O_{11}$ crystal.—73-05638

**charge,**
Algorithm for calculating glass charge compositions.—73-00587
Charge reversal of kaolinite by hydrolyzable metal ions: an electroacoustic study.—73-12754
Dependence of thermomechanical properties of silicate glass on the ratio of charge to cullet.—73-00609
Frit making (frit melting) during inclined flow of the charge.—73-00632
Frit melting in a moving charge along a ramp.—73-00633
Interbilayer charge dynamics in $YBa_2Cu_3O_{6+x}$.—73-15520
Monte Carlo model for trapped charge distribution in electron-irradiated α-quartz.—73-12836
Positive charge generation in $SiO_2$ by electron-impact emission of trapped electrons.—73-13362
Recharging ceramics.—73-10986
Role of the radicals $PO_3^{2-}$ in accumulation of charge upon irradiation of phosphate glasses by electrons.—73-00397

**checker brick,**
Energy reduction by z-type checker blocks in regenerators.—73-00813
Features of operation of blast-furnace hot-blast stoves with poured checkerwork.—73-00815
Stressed and strained condition of the checkerwork, lining, and shell of a blast-furnace hot-blast stove with poured checkerwork.—73-00870

**chemical analysis,**
Chemical analysis of cement.. "a more complete solution."—73-03441
Chemical fingerprinting in detrital ilmenite: a viable alternative in provenance research.—73-15899
Determination of oxygen in oxide ceramics by inert gas fusion analysis—effect of bath metals.—73-16108
Quantitative chemical analysis of borosilicate glasses by the inductively coupled plasma-atomic emission spectroscopy method.—73-03754
Sampling and analysis of KGa-1B well-crystallized kaolin source clay.—73-12678

**chemical reaction,**
Mechanically induced reactivity of solids.—73-13131
Reactions of copper and copper oxides with nitride ceramics (AlN, SiAlON, $Si_3N_4$) and oxide additives ($Al_2O_3$, $Y_2O_3$, $SiO_2$, MgO).—73-03230

**chemical resistance,**
Effect of bituminous emulsions on the sulfate resistance of cement pastes.—73-00071
IRSS investigations of chemical resistance of sealing glasses.—73-00361
Method for increasing chemical resistance of porcelain enamels, especially titanium porcelain enamels: II.—73-10253
Novel porous glass with chemical resistance and good shaping ability prepared from borosilicate glass containing ZnO.—73-00672
**chemical vapor deposition (CVD),**
Active plasma species in TiN film formation process by plasma CVD method.—73-02723
Aerosol chemical vapor deposition of metal oxide films.—73-12336
Amorphous $Si_3N_4$ thin films deposited by dc-PCVD plasma CVD method.—73-05690
Apparatus for depositing of a material on a substrate by chemical vapor deposition.—73-15706
Chemical foundations in understanding the step coverage problem in chemical vapor deposition using silane chemistry.—73-09039
Chemical vapor deposition of ß-SiC by pyrolysis of MTS and effect of excess C sources.—73-09041
Chemical vapor deposition of borophosphosilicate glass initiated by high-frequency discharge plasma.—73-00594
Chemical vapor deposition of $SiO_2$ from tetraethoxysilane: the effect of the surface hydroxyl concentration.—73-02745
Coating porous materials with metal oxides and other ceramics by MOCVD.—73-05208
Comparison of the pyrolysis products of dichlorodimethylsilane in the chemical vapor deposition of silicon carbide on silica in hydrogen or argon.—73-16679
CVD diamond by alternating chemical reactions.—73-12459
CVD diamond for coating twist drills.—73-05296
CVD diamond or diamondlike carbon for chemical-mechanical polish etch stop.—73-02093
CVD method for forming Bi-containing oxide superconducting films.—73-11950
CVD method for forming metal boride films using metal borane cluster compounds.—73-12460
CVD process for the manufacture of ceramic fibers.—73-04969
CVD synthesis and thermoelectric properties of boron carbide.—73-12966
Dependence of electrical properties on film thickness in $Pb(Zr_xTi_{1-x})O_3$ thin films produced by metallorganic chemical vapor deposition.—73-08832
Deposition behavior of $Pb(Zr_xTi_{1-x})O_3$ thin films by metallorganic vapor deposition.—73-12974
Deposition of optical coatings by laser-assisted evaporation and by photoassisted chemical vapor deposition.—73-12977
Deposition of tantalum oxide films by ArF excimer laser chemical vapor deposition.—73-05738
Deposition rates of titanium nitride plates prepared by chemical vapor deposition of $TiCl_4$+$NH_3$ system.—73-16698
Diamond and its preparation by chemical vapor deposition method.—73-05297
Diamond chemical vapor deposition (CVD) via microwave-excited plasma from water-ethanol solutions.—73-05741
Diamond crystal growth apparatus.—73-04971
Difluorosilylene as a precursor for the chemical vapor deposition of titanium silicide.—73-12988
Digital chemical vapor deposition of silicon oxide/nitride and its surface reaction study.—73-03832
Dimer formation on (001)GaAs under organometallic chemical vapor deposition growth conditions.—73-07446
ECR CVD method for forming BN films.—73-12464
Effect of mercury uv photolysis on vapor deposition of $SnO_2$.—73-13008
Effect of pressure on plasma-assisted chemical vapor deposition of silicon oxide(s).—73-09088
Effect of the chemical nature of transition metal substrates on chemical vapor deposition of diamond.—73-06777
Effect of water vapor on the growth of aluminum oxide films by low-pressure chemical vapor deposition.—73-09101
Effects of $C_3H_8$ on the chemical vapor deposition of silicon carbide in the $CH_3SiCl_3$+$H_2$ system.—73-13028
Effects of oxygen doping on properties of microcrystalline silicon film grown using rapid thermal chemical vapor deposition [RTCVD].—73-16466
Epitaxial growth of GaAs prepared by low-pressure MOCVD at low temperatures.—73-07506
Erosive wear behavior of chemical-vapor-deposited multilayer tungsten carbide coating.—73-06784
Fabrication of ceramic composites by CVD/HP process.—73-16772
Formation of epitaxial $Pb(Zr,Ti)O_3$ thin film by CVD.—73-02832
Free-standing diamond sheet and method and apparatus for making [the] same.—73-05301
FTIR, SIMS, and electrical characterization of $Si_3N_4$ thin films obtained from CVD assisted by in situ electrical discharge.—73-04107
Growth kinetics and reaction mechanism of silicon chemical vapor deposition from silane.—73-02844
Growth of epitaxial PLZT film by CVD.—73-02846
Heat-treated chemically vapor deposited products and treatment method.—73-03683
Heteroepitaxy of $TiO_2$, $VO_2$ films, and $TiO_2$/$VO_2$ multilayers grown on sapphire(1$\bar{1}$20) by metallorganic chemical vapor deposition.—73-09160
High-purity and high-density SiC ceramics.—73-02081
High-quality $Y_1Ba_2Cu_3O_{7-\delta}$ ultrathin films produced in situ by high-growth-rate chemical vapor deposition.—73-04733
High-temperature oxidation of chemically vapor deposited silicon nitride in a carbon monoxide-carbon dioxide atmosphere.—73-17222
Homoepitaxial growth of diamond by an advanced hot-filament chemical vapor deposition method.—73-09162
Hot filament activated chemical vapor deposition of boron nitride.—73-02851
Improvement of thermal stability of SiC fiber by CVD-C, SiC coating.—73-02861
Interfacial characterization of chemically vapor deposited titanium carbide on cemented carbide.—73-16186
Kinetics in thermal laser-assisted chemical vapor deposition of titanium carbide.—73-13109
Kinetics of chemical vapor deposition of tungsten carbide.—73-13110
Laser-assisted CVD process forming oxide superconducting films.—73-11959
Low-energy ion doping of growing diamond by CVD.—73-02102
Low-pressure chemical vapor deposition process for depositing high-density, highly conformal titanium nitride films of low bulk resistivity.—73-02103
Low-temperature [≥300°C] chemical vapor deposition of silicon nitride from tetrasilane and hydrogen azide.—73-05898
Method for determining thickness of chemical-vapor-deposited layers.—73-12208
Method for forming CVD thin glass films.—73-13918
Method for forming diamond films by plasma jet CVD.—73-05311
Method for growing a diamond thin film on a substrate by plasma-enhanced chemical vapor deposition.—73-02109
Method for producing CVD diamond film substantially free of thermal-stress-induced cracks.—73-12487
Method for producing flat CVD diamond film.—73-05314
Method of chemical vapor deposition of boron nitride using polymeric cyanoborane.—73-16004
Method of forming a superconducting oxide layer by MOCVD.—73-11970
Method of forming silicon carbide.—73-12492
Method of growing thin film.—73-05317
Method of making hard boron nitride by a plasma CVD method employing beam irradiation.—73-12494
Method of manufacturing a diamond heat sink.—73-12495
Microstructure and growth of SiC film by excimer laser chemical vapor deposition at low temperatures.—73-09209
MOCVD erbium sources.—73-04407
MOCVD of *a*-axis or *b*-axis-oriented superconducting Bi-Sr-Ca-Cu-O films.—73-04856
MOCVD of beta-alumina.—73-16872
Molybdenum-enhanced low-temperature deposition of crystalline silicon nitride.—73-12501
Monte Carlo simulation for dissociation of hydrogen during electron-assisted chemical vapor deposition of diamond.—73-13142
Morphology and structure of tantalum oxide deposit prepared by KrF excimer laser CVD.—73-12633
Nucleation and growth of chemical vapor deposition TiN films on Si(100) as studied by total reflection X-ray fluorescence, atomic force microscopy, and Auger electron spectroscopy.—73-09496
Numerical analysis of deposition rates of zirconium thin films by thermal chemical vapor deposition.—73-02913
Numerical simulation of hydrodynamics and heat transfer in a hot-wall CVD reactor.—73-13156
Optimizing metallorganic chemical vapor deposition of YBCO films: substrates and $pO_2$-$T$ conditions.—73-01621
Organometallic chemical vapor deposition of $SnO_2$ single-crystal and polycrystalline films.—73-02914
Oxygen and hydrogen effects on the chemical vapor deposition of aluminum nitride films.—73-05942
Phase transformation in chemically vapor deposited κ-alumina.—73-17180
Photoemission study of low pressure chemical vapor deposited and reactively sputtered titanium nitride in W/TiN/Si.—73-07721
Photoenhanced chemical vapor deposition: system design consideration.—73-16898
Plasma-enhanced CVD of oxide superconducting films by utilizing a magnetic field.—73-04864
Predicting intrawafer film thickness uniformity in an ultralow pressure chemical vapor deposition reactor.—73-16903
Preparation of $BaTiO_3$ films by CVD.—73-05969
Preparation of magnesium nitride powder by low-pressure chemical vapor deposition.—73-02953
Preparation of $ZrO_2$-$Y_2O_3$ films by CVD using ß-diketone metal chelates.—73-05987
Process for chemical vapor purification of group IIIA metal fluorides.—73-02122
Process for depositing titanium nitride film by CVD.—73-12508
Rapid formation of zinc oxide films by an atmospheric-pressure chemical vapor deposition method.—73-06006
Reaction mechanism of electrochemical vapor deposition [EVD] of yttria-stabilized zirconia film.—73-13227
Reactive-flow simulation of the hot-filament chemical vapor deposition of diamond.—73-13234
Recent progress and application of synthesized diamond (present status and future of vapor phase deposition of diamond).—73-02086
Reduced thermal budget processing of Y-Ba-Cu-O high-temperature superconducting thin films by metallorganic chemical vapor deposition.—73-01647
Role of gas-phase nucleation in the preparation of $TiO_2$ films by chemical vapor deposition.—73-09307
Safety and environmental aspects of CVD.—73-08362
Scaling laws for diamond chemical vapor deposition: I, Diamond surface chemistry.—73-13244
Scaling laws for diamond chemical vapor deposition: II, Atomic hydrogen transport.—73-13245
Self-limiting adsorption and in situ optical monitoring for atomic layer epitaxy of oxide superconductors.—73-04804
Sequential deposition of diamond from sputtered carbon and atomic hydrogen.—73-13250
Sequential deposition of $SiO_2$ and poly-Si in isolation trenches.—73-06034
Silicon nitride elaborated by a low-pressure chemical vapor deposition from $Si_2H_6$ and $NH_3$ at low temperature.—73-03002
Silicon nitride films deposited from $SiH_2Cl_2$-$NH_3$ by low-pressure chemical vapor deposition: kinetics, thermodynamics, composition, and structure.—73-08731
Silicon oxynitride films deposited by mercury photosensitization chemical vapor deposition.—73-16987
Single-phase deposition of α-gallium nitride by a laser-induced transport process.—73-06047
$SiO_2$ films by low-pressure chemical vapor deposition using diethylsilane—processing and characterization.—73-03015
Synthetic Diamond: Emerging CVD Science and Technology (Electrochemical Society Series).—73-17538
Temperature dependence of species concentration near the substrate during diamond chemical vapor deposition.—73-09371
Thermal oxidation characteristics of chemical vapor deposited diamond films.—73-03232
Thermodynamical and experimental analyses of chemical vapor deposition of ATO from $SnCl_4$-$SbCl_5$-$H_2O$ gas mixture.—73-12722
Thin $TiO_2$ films prepared by low-pressure chemical vapor deposition.—73-04180
$TiO_2$-$SnO_2$ deposits prepared by CVD.—73-06123
Two-precursor model for low-pressure chemical vapor deposition of silicon dioxide from tetraethylorthosilicate.—73-13328
X-ray absorption study of diamond films grown by chemical vapor deposition.—73-02540
**chemical vapor infiltration,**
Ceramic matrix composites by microwave-assisted CVI.—73-05700
Chemical vapor infiltration of boron nitride interphase in ceramic fiber preforms: discussion of some aspects of the fundamentals of the isothermal chemical vapor infiltration process.—73-02746
Chemical vapor infiltration using microwave energy.—73-04966
Chemical vapor infiltration: dispersed and graded depositions for ceramic composite.—73-16675
Effects of deposition mechanisms in the modeling of forced-flow/temperature-gradient chemical vapor infiltration [FCVI].—73-05778
Microwave energy-assisted chemical vapor infiltration.—73-01869
Model for the isothermal isobaric chemical vapor infiltration in a straight cylindrical pore: I, Description of the model.—73-13139
Modeling the densification of porous structures in CVI ceramic composites processing.—73-16873
Production of ceramic matrix composites by CVI and DMO [directed metal oxidation] for industrial heating industry.—73-06001
Scaleup and modeling of forced chemical vapor infiltration.—73-16979
**chemicals,**
Lithium chemicals.—73-12284
**chemisorption,**
Electronic and molecular dynamics of chemisorption on α-$Fe_2O_3$ with time-delayed injection of donor-acceptor gases.—73-08862
**chemistry,**
Effect of glass chemistry on the microstructure and properties of self-reinforced silicon nitride.—73-06209
Optical basicity and glass chemistry.—73-00380
**chevron notch,**
Evaluation of fracture toughness by chevron V-notch method.—73-13525
**chlorides,**
Acoustic study *p*-*T* phase diagram of $Cs_2HgCl_4$ crystals.—73-16026
Action of chloride ions on hydrated cement pastes: influence of the cement type and long-time effect of the concentration of chlorides.—73-03433
Appraisal of steel corrosion threat with chlorides in reinforced concrete construction.—73-00026
Calculation of chloride diffusion coefficients in concrete from ionic migration measurements.—73-03439
Chemical attack on hardened cement pastes of blended cements: I, Attack of chloride solutions.—73-00036
Chloride binding capacity [CBC] and binding isotherms of OPC [ordinary portland cement] pastes and mortars.—73-00037
Chloride-induced corrosion of reinforcing steel.—73-03443
Comparison between etching in $Cl_2$ and $BCl_3$ for compound semiconductors using a multipolar electron cyclotron resonance source.—73-04272
Comparison of two methods for measuring the chloride ion permeability of concrete.—73-09860
Diffusion of chlorides into concrete—influence of PFA [pulverized fuel ash] quality.—73-00064
Distribution and growth of isolated spherical particles of separated AgCl phase in photochromic glass from the standpoint of Greenwood theory.—73-00326
Effect of cement composition on chloride binding and corrosion of reinforcing steel in concrete.—73-00073

Effect of chloride and sulfate ions on reinforcement corrosion.—73-03454
Effect of hydrostatic pressure on phase transitions in perovskite-like crystals of $RbCl/CdCl_2$ system.—73-16116
Effects of nickel chloride and calcium chloride on hydration of portland cement.—73-06651
Eigen luminescence of $CsMgCl_3$ single crystals.—73-02592
Electrochemical extraction of chlorides from concrete: I, A qualitative model of the process.—73-13717
Electrochemical removal of chloride from hardened cement paste.—73-13719
Electronic properties of ionic insulators on metal and semiconductor surfaces: RbCl on Si(100) and W(110).—73-04096
Evaluation of $AgNO_3$ solution spray method for measurement of chloride penetration into hardened cementitious matrix materials.—73-01895
Factors affecting use of calcium chloride in concrete.—73-06654
Field method for measuring the chloride content of concrete.—73-13725
Growth of $YBa_2Cu_3O_{7-\delta}$ single crystals with the aid of an NaCl-KCl flux.—73-01565
In situ passivation of GaAs after $BCl_3/Cl_2$ reactive ion etching.—73-07581
Influence of autogenous healing of cement mortar on chloride corrosion of embedded steel bars in mortar.—73-10003
Influence of PFA [pulverized fly ash], slag, and microsilica on chloride-induced corrosion of reinforcement in concrete.—73-00118
Influence of sodium chloride on the corrosion and exudation of fused cast refractories.—73-14597
Influence of soluble chlorides on the rheological properties of suspensions of transition-metal oxides.—73-02872
Initial steps of corrosion in the steel/$Ca(OH)_2$+$Cl^-$ system—the role of heterogeneities on the steel surface and oxygen supply.—73-03492
Interaction of magnesium polyboride and zinc chloride.—73-16179
Interaction pathway of chloride ions with $\gamma$-$Al_2O_3$: surface acidity and thermal stability of the Cl/$\gamma$-$Al_2O_3$ system.—73-08892
Ionic conductivities of spinel-type quaternary lithium chlorides: phase diagrams of $LiCl$-$M^ICl$-$M^{II}Cl_2$ ($M^I$=Cu, Na; $M^{II}$=Mn, Cd, Mg).—73-05426
Neutron diffraction refinement of structure of nonlinear optical crystal of $Cs_2UO_2Cl_4$.—73-01755
Periodicity in change of crystallographic properties of the lanthanide dichlorides.—73-12647
Preparation and phosphate ion exchange properties of a hydrotalcite-like [HTAL] compound.—73-08710
Preparation of $SiCl_4$ from rice hull ashes: III, FTIR-PAS analysis of chlorination mechanism of rice hull ashes containing alkaline and alkaline-earth metal salts.—73-02969
Problematic points of testing for chloride ion content in sea sand for concrete.—73-10095
Properties of $CaCl_2$ hydrate with an inorganic powder: I, Electrical conductivity of $CaCl_2$·$nH_2O$ ($n$=6–7.35) with $\alpha$-$Al_2O_3$ powder.—73-12867
Radiative and nonradiative decay of electronic excitations in CsCl crystals.—73-17096
Rapid method for measuring the acid-soluble chloride content of powdered concrete samples.—73-10128
Refinement of the crystal structures of $Cu_6O_8InCl$ and $Cu_6O_8Cu_2Cl$ by neutron powder diffraction.—73-08721
Salt-occluded zeolites as an immobilization matrix for chloride waste salt.—73-01757
Selective regrowth of III-V epitaxial layers by low-pressure organometallic vapor phase epitaxy [OMVPE] using $CCl_4$.—73-07791
Sol-gel-derived AgCl photochromic coating on glasses.—73-14498
Solubility of the chlorides of copper, cadmium, and sodium in borate and aluminoborosilicate glasses.—73-14084
Structural study on the composite: mordenite with inorganic salt.—73-02455
Structures and crystal chemistry of magnesium chloride and cadmium chloride.—73-02469

**chlorination,**
Effect of sodium chloride on chlorination of a mixture of bismuth(III) sulfide and iron(III) oxide.—73-12576

**chlorine,**
Adsorption and thermal desorption of chlorine from GaAs(100) surfaces.—73-07377
Barrierless dimer breaking at semiconductor surfaces by chlorine atoms.—73-14782
Cold decomposition and potentiometric titration of chlorine in glass and raw materials.—73-05028
Compensation defects in CdTe:Cl samples grown by different techniques.—73-11116
Crystal structure of the chloraluminates of titanium(II), $Ti(AlCl_4)_2$, and refinement of the crystal structure of $AlCl_3$.—73-12563
Effects of chlorine-based gettering on the electrical properties of rapid thermal oxidation/nitridation dielectric films.—73-07309
Enhanced etching of Si(100) by neutral chlorine beams with kinetic energies up to 6 eV.—73-04318
Identification of the volatile reaction products of the $Cl_2$+GaAs etching reaction.—73-11256
Interactions in the system $Fe_2O_3$-$SO_2$-$Cl_2$ investigated by the mass spectrometric method.—73-16181
Interactions of a mixture of tin and antimony oxides with chlorine.—73-16183
Selective doping of *n*-type ZnSe layers with chlorine grown by molecular beam epitaxy.—73-04474
Structure of low-temperature (170 K) phase and piezoelectric properties of cesium tetrachloromercurate.—73-16336
Synthesis and thermal expansion of glasses and melts of the system Te-Cl.—73-14289

**chromates,**
Crystal growth and magnetic characterization of $Zn_{1-x}Mn_xCr_2O_4$ [$x$=0–1] single crystals.—73-07930
Crystal growth and structural study of the new series $Y(OH)CrO_4$, $Dy$-$Lu(OH)CrO_4$: crystal structure of $Er(OH)CrO_4$.—73-02177
Crystal structure of neodymium and europium chromate heptahydrate: synthesis, infrared spectra, and thermal behavior of lanthanoid chromate heptahydrates, $[Ln_2(CrO_4)_3(H_2O)_5]$·$2H_2O$ ($Ln$=La, Pr, Nd, Sm, Eu, Gd).—73-02203
Crystal structure of new pyroelectric $RbLiCrO_4$ at room temperature.—73-02207
Defect structure, nonstoichiometry, and phase stability of Ca-doped $YCrO_3$.—73-03085
Electrode and method of interconnection sintering on an electrode of an electrochemical cell.—73-11015
EPR of the thermally produced $CrO_4^{3-}$ in $CrO_4^{2-}$-doped $(NH_4)_3H(SeO_4)_2$ crystals.—73-02269
Fabrication and characterization of $NiCr_2O_4$ spinel.—73-07322
Frequency response analysis of the fast ion-conducting system cuprous iodide–silver chromate.—73-07326
Li-doped $LaCrO_3$ ceramics.—73-13117
Low-temperature preparation and characterization of pure-phase lanthanide chromates(V) by the citrate gels process.—73-05900
Magnetic ordering in disordered spinels $Zn_xMg_{1-x}FeCrO_4$.—73-07951
Mossbauer and magnetization study of the mixed spinel $CoFe_{2-x}Cr_xO_4$.—73-11667
Preparation of perovskite-type oxide, $LaCrO_3$, by thermal decomposition of $La[Cr(CH_2(COO)_2)_3]$·$6H_2O$.—*73-13198*
Solid solutions of ettringites: II, Incorporation of $B(OH)^{4-}$ and $CrO_4^{2-}$ in $3CaO$·$Al_2O_3$·$3CaSO_4$·$32H_2O$.—73-10155

**chrome,**
Change of spinel in magnesia chrome bricks used in vacuum-oxygen decarburization [VOD] refining furnaces.—73-07198
Chrome-corundum refractory in the packing for a glass furnace regenerator.—73-00787
Effect of ultrafine powder on properties of rebonded fused magnesia chrome refractories.—73-07207
Fabrication of quality magnesite-chrome brick.—73-04001
Government regulation increases for chrome-bearing hazardous waste.—73-17484
Influence of micropowders on microstructure and properties of synthetic magnesite-chrome clinkers.—73-04007
Magnesia chrome refractories—quality and performance.—73-10740
Magnesite chrome refractories and its usage in nickel converter.—73-14601
Reaction between chrome ore and slag.—73-00846
Use of water-granulated chrome slag as fine aggregate for concretes.—73-10187

**chromia,**
Acoustics of magnetoelectric antiferromagnetics: rhombohedral crystals.—73-11645
Change in pigment color in the system $CoO$-$Cr_2O_3$-$Al_2O_3$.—73-00899
Chromia on silica and alumina catalysts: surface structural consequences of interfacial events in the impregnation course of aquated Cr(111) ions.—73-16055
Coating of components with final impregnation with chromia or phosphate forming compound.—73-12353
Discharge of the raw materials used in the production of chromium-oxide-based products from bunkers.—73-01774
Effect of addition of chromium(VI) oxide on the formation of Tl-Sr-Ca-Cu-O 1212 phase.—73-04699
Effects of additives on friction and wear behavior of $Cr_2O_3$ coatings.—73-09585
Effects of surfactants on the tribological properties of a $Cr_2O_3$ coating.—73-06399
EPR investigation of chromium ions in $Ca_2SiO_4$-$Cr_2O_3$ and $Ca_3Si_2O_7$-$Cr_2O_3$ solid solutions.—73-16139
Friction and wear mechanisms of multilayered plasma-sprayed ceramic coatings.—73-09604
Impregnation and firing of $Al_2O_3$ compact with $CrO_3$ saturated solution.—73-02857
Improvement in tribological properties of chromium oxide coating at high temperature by solid lubricants.—73-09616
Reflectance spectroscopy of oxide films of $\alpha$-$Cr_2O_3$ and $\alpha$-$Fe_2O_3$.—73-08722
Resonant photoemission determination of the valence electronic structure of $Cr_2O_3$.—73-08723
Structural and physical characterization of the $Li_2O$:$P_2O_5$:$CrO_{1.5}$ ion-conducting glasses.—73-07360

**chromites,**
Brown spinel pigments based on zinc chromite, method of their production and use.—73-05148
Chromite.—73-12264
Citrate gel processing of the perovskite lanthanide chromites.—73-05707
Corundum-chromite refractories with improved thermal shock resistance.—73-00795
Effect of indirect and direct exchange interactions on magnetic structure of $CuFe_2O_4$ and $CuFeCrO_4$ ferrites.—73-15317
Effect of preparation method on chemical stability of sinterable calcium-doped lanthanum chromites.—73-16736
Fluxed lanthanum chromite for low-temperature air firing.—73-12367
Magnetic anisotropy of dysprosium and terbium orthochromites.—73-15332
Nanodisperse CrSi(O, N) thin films—conductivity, thermopower, and applications.—73-02646
NMR study of spin reorientation in $Ho_{0.07}Y_{0.093}CrO_3$.—73-16231
Refractories based on sintered and fused periclase chromite.—73-00852
Thermal expansion properties of A-site-deficient $La(Sr)CrO_3$.—73-08988
Thermal expansion properties of A-site-deficient $La(Sr)CrO_3$.—73-16630
Weak ferrimagnetism in neodymium ferrite chromites.—73-01484

**chromium oxide,**
Crystal structure of $Cr_6O_{21}$ determined from powder diffraction data: thermal transformation and magnetic properties of a chromium-chromate tetrachromate.—73-02192
Interfaces in a system of chromium oxide–duplex steel.—73-03608
Preparation of perovskite-type oxide, $LaCrO_3$ by thermal decomposition of $La[Cr(CH_2(COO)_2)_3]$·$6H_2O$ [at RT–1000°C].—73-02962
Structural study on $AgI$-$Ag_2O$-$CrO_3$ glass.—73-00412

**chromium,**
$K_R$-curve behavior in $Al_2O_3$-Cr ceramic-metal composites.—73-06812
Alumina–chromium carbide composite through an internal synthesis method.—73-02725
Ceramic film synthesis with highly energetic ions: II, Chromium nitride.—73-12935
Characteristics of chromium carbide layers produced on martensitic stainless steel using different chemical vapor deposition (CVD) techniques.—73-10201
Characteristics of the diffusion and drift of nonequilibrium carriers in $CdCr_2Se_4$.—73-03080
Characterization and oxidation resistance of hot-pressed chromium diboride.—73-17245
Chromium ion luminescence in semiconducting spinel $CdIn_2S_4$:Cr.—73-14807
$Cr^{3+}$ centers in $LiNbO_3$: experimental and theoretical investigation of spin Hamiltonian parameters.—73-16071
CrTlSrCaCuO and related superconducting systems.—73-04833
Crystal and magnetic structures of $Ca_2Cr_{0.5}Fe_{1.5}O_5$ at 2.1 K.—73-02174
Crystal and magnetic structures of hardened CrSe and $Mn_{0.1}Cr_{0.9}Se$.—73-16074
Crystallization of precursors to forsterite and chromium-doped forsterite.—73-05379
Cw lasing characteristics of high-$Cr^{4+}$ concentration forsterite.—73-16436
Degradation of CrSi(W)-O resistive films.—73-07293
Distribution of paramagnetic impurity in $LaSrAl_{1-x}Cr_xO_4$ and $YCaAl_{1-x}Cr_xO_4$ ceramics [$x$<0.15].—73-16113
Electronic structure of $Cr^{4+}$-center in yttrium aluminum garnet.—73-02260
Electronic structure of the channel compound $TlCr_5Se_8$: an XPS study.—73-05393
EPR study of chromosilicalite.—73-08616
Gas-pressure combustion sintering and properties of $Cr_3C_2$ ceramic and its composite with TiC.—73-05822
Gas-pressure combustion sintering and properties of $Cr_3C_2$ ceramic and its composite with TiC.—73-13071
Hall effect in ferromagnetic *n*-type semiconductor $HgCr_2Se_4$ in strong electric field.—73-14955
Heat-resistant materials.—73-10315
Improved mechanical properties of $Cr_3C_2$ using particulate SiC reinforcement.—73-09615
Influence of chromium on the oxidation state of an industrially melted amber glass.—73-14409
Influence of the impurity concentration on the microstructure of compound semiconductors—the example of ZnS:Cr optical spectra.—73-01209
Influence of the process of vapor phase epitaxy on clusters of electrically active defects in GaAs:Cr substrates.—73-14988
Internal reduction of chromium-doped $\alpha$-alumina.—73-06240
Interphases in $Si_3N_4$/Ni-Cr alloy joints.—73-03611
Kinetics of reaction between $Si_3N_4$ and Cr in $N_2$ atmosphere.—73-13857
Laser FIR magnetospectroscopy of $Zn_{1-x}Cr_xSe$.—73-15006
Li-doped $LaCrO_3$ ceramics.—73-03100
Metal-semiconductor transition in $Cr_{1-x}S$ ($x$≤0.12).—73-15040
Metallization of silicon carbide with chromium powder.—73-03616
New superconducting 1201-type phase $(Tl,Cr)Sr_2CuO_5$.—73-01613
Optical fluorescence from chromium ions in sapphire: a probe of the image stress.—73-05442
Optical properties and preparation of transparent glass-ceramics containing $Cr^{3+}$ ions.—73-03861
Optical properties of $Cr^{3+}$ in thin-film lead-based fluoride glass.—73-07059
Oxidation of $CrN_x$ hard coatings reactively sputtered at low temperature.—73-00255
Phase development and luminescence in chromium-doped yttrium aluminum garnet (YAG:Cr) phosphors.—73-16562
Phase development in the system Gd-Cr-S.—73-02374
Phase transition and thermal expansion of $LaCrO_3$ solid solutions.—73-16263
Preparation of $Yb_2Cr_2C_2$ and magnetic properties of the carbides $R_2Cr_2C_2$ (R=Yb, Ld–Lu) with $Ho_2Cr_2C_2$-type structure.—73-04639
Processing of chromium silicide–silicon carbide nanostructured composite by thermal conversion of spray-dried precursor powders.—73-05999
Quasi-continuous wave laser operation of $Cr^{4+}$-doped $Y_2SiO_5$ at RT.—73-16581

Radiative energy transfer from $Cr^{3+}$ to $Nd^{3+}$ in $LiNbO_3$:Nd,Cr.—73-11610
Segregation of chromium at the interface between Ni-Cr-Si-Ti brazing filler metal and $Si_3N_4$ ceramics.—73-00265
Sintered microcrystalline ceramic material.—73-09774
Specific features of structure and properties of $Na_3Cr_2(PO_4)_3$ crystals.—73-02437
Spectroscopy and energy levels of $Cr^{3+}$ in magnesium-doped lithium niobate.—73-04572
Static and dynamic characteristics of bulk and contact electrical resistivity in $CdCr_2Se_4$ under stochastic current instability.—73-15176
Superionic properties of semiconductor $Cr_{2-x}Se$ as a manifestation of a charge-transfer exciton phase.—73-15192
Synthesis and crystal structure of chromium polyphosphate, $Cr(PO_3)_3$.—73-02482
Synthesis of $(Cr_{1-x}Ti_x)O_3$ solid solution by laser-ignited vapor-phase reaction.—73-06085
Tensimetric investigation of solid solutions $Cr_{2.83}Fe_{0.1}Te_x$.—73-16363
Tetrahedrally coordinated $Cr^{5+}$ in $SrTiO_3$.—73-05510
Thermally stable chromium-exchanged zeolites and method of making [the] same.—73-02073
Thermodynamic analysis of the conditions of formation of the condensed phases of the system Cr-C-O-H by use of chrome carbonyl.—73-16375
X-ray diffractometry study of orthorhombic modification of $Li_3Cr_2(PO_4)_3$ at 293, 473, and 573 K.—73-02544
Yellow high silica glass.—73-00722

**circuit board,**
Ceramic circuit board with a curved lead terminal.—73-14743
Ceramic packages and ceramic wiring board.—73-11005
Distributed constant circuit board using ceramic substrate material.—73-01050
Functionally gradient circuit board.—73-10311
Glass powders for circuit boards.—73-00492
Influence of shrinkage mismatch between copper and ceramics on dimensional control of the multilayer ceramic circuit board.—73-03601
Influence of shrinkage mismatch between copper and ceramics on dimensional control of the multilayer ceramic circuit board.—73-10238
Method for manufacturing an oxide superconducting circuit board by printing.—73-11965
Method of manufacturing a multilayered ceramic circuit board containing layers of reduced dielectric constant.—73-14753
Method of manufacturing ceramic circuit board.—73-01060
Method of minimizing lateral shrinkage in a cofired, ceramic-on-metal circuit board.—73-11035
Multilayer wiring board.—73-11039
Process for fabricating a multilayer ceramic circuit board.—73-11043
Process of producing multiple-layer glass-ceramic circuit board.—73-11047

**circuits,**
Conception of grinding circuits assisted by an ordinater.—73-01769
Low-melting glasses for the potting of thick film microcircuits.—73-00654
Mathematical modeling of the effect of air ventilation on solids recycle rate and ball mill performance.—73-04930
Method of forming superconducting circuit.—73-01717
New packaging challenges posed by high-power CMOS.—73-04145
T-gate, Γ-gate, and air-bridge fabrication for monolithic microwave-integrated circuits by mixed ion-beam, high-voltage electron-beam, and optical lithography.—73-15197

**cladding,**
Laser cladding of high-temperature coatings.—73-06814

**classification,**
Classification and properties of various liquids.—73-16420
Evaluation of the effectiveness and the classification of multicomponent concretes.—73-03468
Functional classification of vitreous, vitrocrystalline, and ceramic materials.—73-03392
Powder classification technologies in ceramics.—73-01814
Proposed material-genesis classification of specialty clays.—73-01994
Refractory materials between traditional ceramics and advanced ceramics.—73-10766

**classifiers/classification,**
Air classification on an inclined moving grid.—73-01761
Clays of Saxony[, Germany].—73-12266
Comparative tests with classifiers: I.—73-12018
Refractories: traditional or advanced ceramics.—73-10763

**clays,**
$^{27}Al$ NMR spectroscopic investigations on intercalation in oxyhydroxyl aluminum cations in the interlayer space of hectorite.—73-02143
Activating the sintering process of the ceramic bodies based on loess-like loamy clays.—73-00585
Brickwork products.—73-03988
Calculation of refractoriness of ceramic products.—73-12113
Carbonization of polyfurfuryl alcohol prepared between the lamellae of saponite.—73-12933
Cement/clay-based segments made by compaction and sintering technologies.—73-03977
Characterization by physisorption of a new class of microporous adsorbents: pillared clays.—73-16419
Clay industry 1950-1990.—73-12265
Clays of Saxony[, Germany].—73-12266
Deflocculation behavior of clay suspensions with a high nonclay content.—73-02763
Deflocculation of concentrated aqueous clay suspensions with sodium polymethacrylates.—73-05729
Determination of the grog content in clay.—73-01892
Diffusion kinetics theory of parallel solid-phase processes at fuel containing ceramics burning.—73-15715
Effects of clays on fracture properties of cement-based materials.—73-03458
Electron spin resonance and nuclear magnetic relaxation dispersion studies of commercial clay minerals and zeolites.—73-05142
Extrusion properties of clay.—73-07191
Extrusion through a great cross-section area.—73-03978
Fast drying of perforated clay blocks.—73-05114
Flotation reagent as a clay substitute in enamel slips.—73-00234
Fluorided beidellite clay and process for preparing the clay.—73-12310
Glass-ceramics from altered basalt-clay mixtures.—73-14396
Hardening characteristics of some clay minerals.—73-02614
High-strength ceramic fiber board.—73-05218
Imogolite: a possible new type of shape-selective catalyst.—73-05171
Improved suction apparatus for plating clay specimens onto ceramic tiles.—73-12036
Influence of material composition on rheological properties of clay/water suspensions.—73-02870
Influence of the support in the selectivity of Ni/clay catalysts for vegetable oil hydrogenation.—73-16521
Large scale mixing—according to the mixing bed technique.—73-12040
MAS NMR and ir studies of pillared clays.—73-05434
Operational raw material control during clay mining.—73-12291
Physicochemical and mechanical properties of ceramic materials made from a Moroccan clay: I, Preparation, structural properties, and mechanical behavior.—73-10686
Practical approach of the use of dry steam injection in clay processing.—73-04941
Properties and characterization of $Al_2O_3$ and $SiO_2$-$TiO_2$ pillared saponite.—73-12664
Property beneficiation of clay raw materials.—73-12059
Proposed material-genesis classification of specialty clays.—73-01994
Relationship between properties of clays and additives for their slurries.—73-10894
Simple air-stream clay separator.—73-12062
Simple approach to technological control of clay-containing ceramic bodies.—73-08364
Situation of new types of Chinese building material and proposals for it.—73-13645
Structure and properties of confined liquids: a molecular model of the clay–water interface.—73-08974
Synthesis and characterization of titanium pillared clays: influence of the temperature of preparation.—73-03038
Synthesis of clay-based pigments.—73-07274
Use of local clays for vitrification of radioactive wastes.—73-01759
Vitrified clay pipes for clean water and a healthy environment.—73-03986
Zirconia-pillared clays and micas.—73-02001

**cleaners/cleaning,**
Amorphous silicon alloys on c-Si: influence of substrate cleaning and ion bombardment on film adhesion and microstructure.—73-09016
Automatic swabbing system is working well for Wheaton.—73-10498
Cleanability of slip-resistant tile.—73-00900
Cleanability of work surfaces in contact with food.—73-10204
Cleanability study of pyrolytic enamels.—73-13808
Cleaning by blasting with pellets of dry ice.—73-12117
Cleaning gases from polishing crystal glass components.—73-00597
Cleaning system for coolant in glass cutting industry.—73-12017
Cleaning the surface of $SrTiO_3$(100) and $LaAlO_3$(100) under moderate temperature condition by Bi adsorption/desorption treatment.—73-02747
Composition and method for cleaning greenware and wetting expelled silica dust.—73-01850
Dry surface cleaning of plasma-etched high electron mobility transistors [HEMT's].—73-11148
Ease of cleaning of ceramic tiles.—73-14652
Flue gas cleaning with limestone.—73-01783
Low-temperature cleaning processes for Si molecular beam epitaxy.—73-13120
New nonstick porcelain enameling systems.—73-10256
Photostimulated evaporation of $SiO_2$ and $Si_3N_4$ films by synchrotron radiation and its application for low-temperature cleaning of Si surfaces.—73-02921

**clinkers,**
Acceleration of the clinker formation process.—73-09801
Alteration of polished sections of free-lime-containing cement clinker by short-term atmospheric exposure.—73-00022
Burning cement clinker from the raw meal using barite and fluorspar as a combined additive.—73-09834
CaO clinker with improved antihydration property.—73-00782
Cements based on modified portland and sulfoaluminate-belite clinkers.—73-13690
Characterization of burning condition of cement clinker by X-ray diffractometry.—73-00035
Chemical composition and microstructures of sulfoaluminate cement clinker.—73-09851
Chemistry, structure, properties, and quality of clinker.—73-09853
Clinker formation and new processes.—73-09855
Clinker grindability and textures of alite and belite.—73-13692
Clinkerization through melting—a new approach.—73-09856
Composition of spinel clinker for teeming ladle casting materials.—73-14580
Development of aluminobelitic colored clinkers.—73-09889
Effect of energy conservation and environmental control measures on clinker properties.—73-09903
Effect of gypsum addition on the properties of clinkers with high $Na_2O$ content.—73-09906
Effect of increased magnesium oxide contents and mixture basicity upon clinker phases.—73-09909
Effect of $SO_3$ and MgO on phase relations and crystal chemical state of phases in belite–aluminoferrite clinkers.—73-09917
Effect of $SO_3$ on mineral formation and properties of clinkers.—73-09918
Effect of the combustion of coal mixed with limestone on the burning process of clinker.—73-09921
Effect of thermal treatment on the reactivity of clinker minerals produced from vertical shaft kiln.—73-09923
Evaluation of radiation-synthesized clinker.—73-09953
Formation of low-temperature portland cement clinker by using nontraditional aluminosilicate rock and mineralizer.—73-09969
Formation of portland cement clinker in low temperature and a rapid heating-up burning process.—73-09970
Forming mechanism of portland cement clinker under different burning conditions.—73-09971
Grate cooler performance optimization at Eiberg Zement.—73-09975
Growth of hydraulic activity of portland cement clinker as a result of using precalcining.—73-09977
Impact of nontraditional raw materials on the formation and properties of clinker.—73-09996
Industrial tests of belite clinker production and evaluation of properties of cements obtained with this clinker.—73-10000
Influence of burning atmosphere on distribution of minor and trace element in clinker and formation of brown color clinker.—73-10005
Influence of micropowders on microstructure and properties of synthetic magnesite-chrome clinkers.—73-04007
Influence of raw mix burnability on cement clinker.—73-03487
Influence of $SO_3$ in $C_2A_xF_{1-x}$-$C_{11}A_7CaF_2$-$C_2S$ system on formation of $C_{11}A_7CaF_2$.—73-10012
Interaction of structure and properties of sulfoferritic and sulfoaluminoferritic clinker melts.—73-13744
Interstitial material in oil well cements: evidence from X-ray microanalysis.—73-10020
Kinetics of the radiation-thermal $C_2S$ [dicalcium silicate] synthesis.—73-10024
Mechanism of 3CaO·$SiO_2$ prevention in presence of excess $SO_3$.—73-10037
Microscopy of portland cement clinker.—73-10046
Mineralizers, modifiers, and activators in the clinkering process.—73-10053
Morphology and microstructure features of clinker from vertical shaft kiln.—73-10058
Mossbauer and X-ray diffraction studies of two dry and hydrated portland cements and their clinkers.—73-00148
Negative effect of alkali on burning and properties of portland cement clinker and its improving measures.—73-10060
Operation control of the CKP-R pregrinding system.—73-04938
Operation of grate coolers and a method of evaluating their efficiency.—73-10072
Optimal parameters of clinker formation in a rotary kiln.—73-10073
Partial finish grinding: two-stage grinding of cement clinker.—73-00158
Peculiarities of the process of cement clinker formation by changing the interaction sequence of reacting components.—73-10077
Pendulum grate cooler with horizontal aeration of the clinker.—73-03513
Phase relations in the system $Ca_2SiO_4$-CaO-$CaSO_4$-$CaF_2$ relevant to cement clinkering.—73-10080
Phase transformations when synthesizing clinkers produced of technogeneous raw materials.—73-10081
Pore structure of clinker and its grindability estimated by different grinding types in mill.—73-10085
Preparation of low-clinker cement using cinder from fluidized bed furnace of power plant.—73-10092
Processing conditions of portland cement clinker as viewed from the fine textures of the constituent minerals.—73-10099
Quality control of portland cement clinker during operation by microscopy.—73-10117
Quality improvement in clinker using mineralizers/activators.—73-10118
Role of clinker liquid in promoting the clinkerization and its impact on clinker morphology and microstructure.—73-10141
Separation of the aluminate and ferrite phases from cement clinker by selective dissolution and their crystal structure refinement.—73-10149
Sintering mechanism of portland cement clinker with energy saving and early strength.—73-10154
Structure and properties of low-CaO contained clinker.—73-10168
Study and application on high-quality cement clinker calcining with low heat consumption in shaft kiln.—73-10169
Thermal treatment of cement raw materials through intensive heat exchange.—73-10180
Update on the properties of clinker and cement derived from industrial chemical wastes.—73-03551

**clusters,**
Arsenic cluster engineering for excitonic electrooptics.—73-11072
Cluster formation in the vapor produced by laser pulsing of the $Y_1Ba_2Cu_3O_7$ superconducting solid.—73-08001

Cluster size determination in the chemical vapor deposition of aluminum nitride.—73-17118
Effect of magnetic and nonmagnetic impurities of the carrier binding energy in Cu-O clusters.—73-11652
Evaluation of the catalytic activity of a high-surface-area, regular, porous solid formed from the clusters of clusters, $M^{II}_4O[(CO)_9Co_3CCO_2]_6$, M=Co, Zn.—73-05561
Growth of sodium clusters on the surface of Na β″-alumina crystals induced by electron bombardment.—73-09157
Kinetic model of vapor-deposited thin-film condensation: nucleation stage.—73-05887
Novel method to generate ionic clusters within zeolites.—73-16884
Quantum size effects in zinc oxide nanoclusters synthesized by reactive sublimation.—73-05462
Structure of metal-nonmetal clusters.—73-17202

**coal,**
Application of coal slag in outer wall tiles.—73-10792
Ceramic brick production making use of coal mining wastes of Ekibastuzsky basin.—73-00766
Effects of coal gangue additives on quality of clay brick.—73-10678
Once setting-firing of surplus heat firing perforated brick of coal gangue.—73-08354
Present state, tendency, and future of utilization of fly ash in China.—73-08498
Pulverized coal fueling for rotary cement kilns with rotor weight feeders.—73-01965
Unfired bricks from colliery spoil.—73-06729

**coatings,**
ß-tricalcium phosphate [ß-TCP] coating on titanium.—73-00210
Abrasion, erosion, and scuffing resistance of carbide and oxide ceramic thermal-sprayed coatings for different applications.—73-06734
Abrasion-resistant coatings for glass articles.—73-00724
Advanced layer systems and coating techniques for large-area glass coatings by means of high-rate sputtering.—73-07106
Advanced thermal barrier coated superalloy components.—73-03669
$Al_2O_3$ coating on MgO particles.—73-05687
Alkali corrosion-resistant coatings and ceramic foams having superfine open cell structure and method of processing.—73-05186
Aluminum nitride as a corrosion protection coating for steel: self-scaling porous electrode model.—73-00208
Anticorrosion coating for quartz glass.—73-00590
Apparatus and method for producing carbide coatings.—73-01841
Application of CPD coating to drying cars.—73-12107
Application of TiN-coated bushings in the standard method for indicating the wear characteristics of hydraulic fluids in vane pumps.—73-06739
Applications for ceramic coatings.—73-05155
Automobile glasses with heat-shielding surface coating.—73-03822
Ball and roller bearings and bearing components.—73-12447
Behavior of nucleation and growth of carbide layers on alloyed carbide particles in substrates in salt bath carbide coating.—73-09022
Bioapplications of diamondlike carbon [DLC] coatings.—73-13800
Biological and physical properties of apatite coatings.—73-08503
Boron-nitride-coated microcutting device.—73-10302
Bottle coating first for Europe.—73-08322
Boundary film for structural ceramic materials.—73-06741
Calculating the optical properties of coated glasses.—73-10419
Calculation of optimal mixtures for frit production.—73-15708
Carbon coating of ceramic materials by pyrolysis of polymeric-based systems.—73-16662
Carbon-fiber-reinforced composite material having a gradient carbide coating.—73-05289
Ceramic bonding method.—73-00279
Ceramic coating material for a microfuse.—73-04190
Ceramic composite coating material.—73-10305
Ceramic powder useful in the manufacture of green and densified fired ceramic articles.—73-05292
Ceramic sprayed coatings and their applications.—73-12320
Ceramic thermal barrier coating for rapid thermal cycling applications.—73-13914
Ceramic-coated fibers.—73-12349
Characteristics of carbon-coated optical fibers.—73-03823
Characterization and optical properties of thin films formed on TiN coatings during electrochemical treatments.—73-02558
Characterization of different conversion coatings on aluminum with spectroscopic ellipsometry.—73-13806
Characterization of laser-glazed plasma-sprayed yttria-stabilized zirconia coatings.—73-00215
Characterization of plasma-sprayed silicide intermetallic compound coatings.—73-06747
Characterization of $SiO_2$ films on glass substrate by sol-gel and vacuum deposition methods.—73-10506
Characterization of wear damages in coatings by optical profilometry.—73-08379
Chemical vapor deposition of very thin coatings on carbon fiber bundles.—73-09042
Chemically deposited $Bi_2S_3$-$Cu_xS$ solar control coatings.—73-04065
Chemically vapor deposited alumina coatings on high-speed steel cutting tools.—73-10203
Chromium-carbide-reinforced composite coatings for high-temperature hard-coat applications.—73-06750
Coated aluminum nitride powder and its preparation.—73-05294
Coated carbonaceous articles and method for making [the] same.—73-15983
Coated ceramic fiber system.—73-05205
Coated ceramic filler materials.—73-05206
Coated glass and method of manufacturing [the] same.—73-03911
Coated metal article.—73-03676
Coated metal article.—73-03677
Coating additives for improved mechanical reliability of optical fiber.—73-03778
Coating an oxide powder by spray drying.—73-05207
Coating composition for glass containers.—73-10622
Coating for improved retention of cBN in vitreous bond matrices.—73-09770
Coating for protecting a carbon-carbon composite from oxidative degradation.—73-03913
Coating materials assessment for carbon-carbon space structures.—73-12419
Coating of anatase titanium dioxide particles.—73-12352
Coating of apatite layer on surfaces of organic polymers by a biomimetic process.—73-09043
Coating of apatite layer on surfaces of organic polymers by a biomimetic process.—73-16676
Coating of nonoxide ceramics by interaction with metal powders.—73-02749
Coating thickness and surface roughness of TiN-coated high-speed steel in relation to coating functionality.—73-06752
Coatings for microelectronic devices and substrates.—73-12354
Coatings for $SiO_2$ optical fibers.—73-03914
Coloring aluminum flakes.—73-03678
Comparative dry wear behavior of hard coatings.—73-06755
Comparative study of the fretting wear of hard carbon coatings.—73-03246
Composition and structure of the intermediate layer on the boundary between metal and protective coating.—73-06760
Construction of antistatic floors coated with ceramics.—73-08387
Conversion coating on carbon/carbon composites with controlled microstructure.—73-15984
Cookware coating system.—73-03681
Cost-effective and environmentally sound chemical process for coating fine particulates.—73-16691
Cracking and delamination of coatings.—73-03252
Current status review: filtered arc evaporation.—73-15711
CVD carbide coatings on Blackglas–Nicalon (C) composites for oxidation protection.—73-10514
Debond coating requirements for brittle matrix composites.—73-13501
Degradation of plasma-sprayed alumina and zirconia coatings on stainless steel during thermal cycling and hot corrosion.—73-00219
Densification of plasma-sprayed ceramic coatings by HIP treatment and their cracking behavior.—73-02766
Deposition of stabilized zirconia onto metallic substrates using a dc thermionic triode ion plating technique.—73-10213
Deposition of Ti(C,N) coatings by arc evaporation.—73-10214
Deposition process of a ceramic coating on a metallic substrate.—73-10309
Development of tantalum pentoxide coatings by chemical vapor deposition.—73-15923
Diamond-coated body.—73-16711
Diamond-coated hard material, throwaway insert, and a process for the production thereof.—73-15990
Diamond-coated products.—73-05299
Diamondlike carbon [DLC] coatings on Ti-6Al-4V.—73-06769
Distribution and chemical states of ions around the interface between sol-gel-derived silicate films and substrates.—73-02775
Dry sliding wear of TiN-based ternary PVD coatings.—73-09571
Effect of active metal coatings on the mechanical properties of silicon-nitride-based ceramics.—73-10219
Effect of an internally conductive coating on the electron emission from glass tips.—73-00951
Effect of microstructure and hydrogen content on the characteristics of amorphous hydrogenated carbon protective coatings.—73-03137
Effect of plasma nitriding on the properties of (Ti, Al)N coatings deposited onto hot-work steel substrates.—73-03580
Effect of plasma-spray operating conditions on plasma jet characteristics and coating properties.—73-09084
Effect of rare-earth elements on microstructure and wear resistance of laser-remelted iron alloy coatings containing metalloids.—73-06776
Effect of SiC/BN double coating on fiber pullout in mullite fiber/mullite matrix composites.—73-02795
Effect of siliceous slurry coating on water tightness of cold joint.—73-09916
Effect of spraying parameters of the LPPS [low-pressure plasma spraying] method on the structure of ceramic coatings.—73-09098
Effect of substrate on optical characteristics of polarizationally isotropic coatings.—73-02588
Effects of additives on friction and wear behavior of $Cr_2O_3$ coatings.—73-09585
Elastic and dry sliding characteristics of [high-velocity oxyfuel] HVOF-sprayed $Al_2O_3$ and $Al_2O_3$-$TiO_2$ coatings.—73-09588
Electrical resistivity of oxide film coatings on glass.—73-07316
Electrical resistivity of plasma-sprayed titanium diboride coatings.—73-08858
Electrochemical fabrication of bioactive composite coatings on Ti6Al4V surgical alloy.—73-13832
Enamel coatings with improved working and aesthetic properties.—73-00226
Erosion of some HVOF [high-velocity oxy-fuel] sprayed coatings in fluidized bed circumstances.—73-09526
Evaluation methods for thermal spray coatings.—73-08399
Evaluation of high-emittance coatings in a large industrial furnace.—73-07211
Evaluation of optical properties of decorative coatings by spectroscopic ellipsometry.—73-12800
Evolution of hard coatings and base materials on cutting tool applications.—73-08531
Experimental approach to the analysis of the adhesion properties of SiC coatings deposited on steel substrates.—73-10227
Experimental/analytical investigation of plasma-sprayed alumina coatings.—73-09124
Ferroelectric thin coatings.—73-11577
Fiber coating of unbonded multilayers for toughening ceramic fiber-matrix composites.—73-12364
Field emission electron source employing a diamond coating.—73-04514
Fine-grained coating of vapor-grown diamond on metallic wire substrate.—73-13837
Fire-resistant barriers for composite materials.—73-02038
Formation and properties of laser coatings based on oxynitride ceramic.—73-13062
Formation of ceramic thin film on ceramic body.—73-12078
Fractal polyzirconosiloxane cluster coatings.—73-10233
Friction and wear behavior of electroless Ni-P coating.—73-09603
Friction and wear performances of [D] detonation-gun- and plasma-gun-sprayed ceramic and cermet hard coatings under dry friction.—73-06796
Friction characteristics of ceramic slurry and plasma-sprayed coatings.—73-09606
Future in multicolor-coated packaging.—73-10537
Gas turbine cooling.—73-10312
Gas turbine elements bearing coke inhibiting coatings of alumina.—73-03682
Glass-ceramic coatings for titanium aluminides.—73-06798
Glass-ceramic coatings for titanium-based metal surfaces.—73-10313
Glass-ceramic sol-gel coating of ceramic fibers.—73-16803
Glass-ferrite coatings on ceramics.—73-00495
Graded thermal barrier coatings [TBC's]: evaluation.—73-13841
Ground coats for chemical equipment.—73-13843
Guanidine-based vehicle/binders for use with oxides, metals, and ceramics.—73-04978
Hard material coatings on flat glass and their applications.—73-00637
Hard surfacing material for engine components and method for depositing [the] same.—73-10314
Heat-treatable sputter-coated glass systems.—73-10635
Heat-treatable sputter-coated glass.—73-00735
High-frequency leaky Lamb wave [LLW] measurement of elastic properties of coatings.—73-08404
High-pressure HVOF [high-velocity oxy-fuel]—an update.—73-08341
High-temperature coatings for the sheet glass.—73-14404
High-temperature-resistant structure.—73-12472
Hot end coating [analysis].—73-07137
Hydrolytic resistance of the surface of soda-lime glass coated with silica layer.—73-03792
Impact strength of glass coatings on prealuminized steel.—73-00240
Improving thermal efficiency with ceramic thermal barrier coatings [TBC's].—73-06804
India-stabilized zirconia coating for composites.—73-12476
Industrial diamond coating and method of manufacturing the same.—73-05304
Influence of deformation on the strength of enamel coatings.—73-00241
Influence of the substrate material on the effectiveness of coating in metal cutting.—73-13849
Influence of thermal conductivity of the spray powder on the adherence of plasma-sprayed ceramic coatings.—73-09182
Inhibiting coke formation by coating gas turbine elements with alumina.—73-03686
Inhomogeneous transparent optical coatings on transparent substrates [studied] by spectroscopic ellipsometry [SE].—73-12148
Intermittent carbon coatings for application in ceramic matrix composites.—73-08533
International Conference on Metallurgical Coatings and Thin Films.—73-17490
Interrelation of technology parameters and the quality of thin-layer coatings.—73-07041
Ion plating deposits of boron nitride, an FTIR structural characterization.—73-13106
Laboratory testing of porcelain coatings for home laundry.—73-13859
Laser cladding of high-temperature coatings.—73-06814
Laser melting of plasma-sprayed alumina coatings.—73-13860
Laser processing of sol-gel coatings.—73-10559
Lead-free glass coatings.—73-10914
Low-cost cathodic and conductive coating compositions comprising lightweight hollow glass microspheres and a conductive phase.—73-04213
Low-temperature ozonolysis of silicon and ceramic oxide precursor polymers to ceramic coatings.—73-15947
Low-temperature process for converting silica precursor coatings to ceramic silica coatings by exposure to ammonium hydroxide or an environment to which water vapor and ammonia vapor have been added.—73-05221
Mechanical properties and microstructural development during heat treatment of a plasma-sprayed thermal barrier coating: $ZrO_2$-8 wt% $Y_2O_3$.—73-06819
Metastable phases in yttrium oxide plasma spray deposits and their effect on coating properties.—73-02892

Method and apparatus for coating glassware.—73-10640
Method and apparatus for direct arc plasma deposition of ceramic coatings.—73-12480
Method and apparatus for forming high-critical-temperature superconducting layers on flat and/or elongated substrates.—73-11962
Method for coating a dielectric ceramic piece.—73-11027
Method for coating optical fibers.—73-03942
Method for continuously coating fibers.—73-01863
Method for fabricating oxide superconducting coatings.—73-15682
Method for forming a surface coating using powdered solid oxidants and parent metals.—73-03689
Method for forming carbide coating on various metals and their alloys.—73-00286
Method for measuring temperature-dependent stress and thermal expansion of coatings.—73-15818
Method for protecting articles from hydrogen absorption by application of an alumina coating.—73-03692
Method for repair and restoration of a ceramic thermal-barrier-coated substrate by providing an intermetallic coating.—73-03693
Method of coating carbon fibers with a carbide.—73-02113
Method of coating superconductors with inorganic insulation.—73-02050
Method of fabricating silicon carbide coatings on graphite surfaces.—73-16005
Method of forming coatings by plasma spraying magnetic cerment dielectric composite particles.—73-15380
Method of forming Si-O containing coatings.—73-14752
Method of forming water-repellent metal oxide film coated on glass substrate.—73-05230
Method of making a gas turbine blade having a duplex coating.—73-03695
Method of preparing vitreous ceramic composition suitable for coating ceramic articles.—73-15949
Method of printing a glass pane with a decorative coating reaching the peripheral face of the glass pane.—73-03951
Method of producing integral, hard nitride layer on titanium/titanium alloy.—73-13919
Microanalytical investigation of cement specimens with encased, chlor-tri-fluoroethane coated, continuous E-glass fibers.—73-00140
Microhardness variations in thermally sprayed coatings.—73-09647
Micromechanical properties of thermal barrier coatings using depth-sensing indentation.—73-06828
Microstructural and thickness uniformity of zirconia coatings produced by rf ion plating.—73-09477
Microstructural features related to corrosion initiation in titanium-aluminum nitride coated steel.—73-10254
Microstructural index for pores in thermal spray coatings.—73-08418
Microstructural investigation of κ-modification layers in CVD $\alpha$-$Al_2O_3$/κ-$Al_2O_3$ multilayer coatings.—73-03165
Microstructures of $Y_2O_3$-stabilized $ZrO_2$ electron beam–physical vapor deposition coatings on Ni-base superalloys.—73-09491
Microwave plasma CVD method for coating a substrate with high-thermal-conductivity diamond material.—73-05319
Modeling of the intrinsic stress in PVD coatings.—73-05930
Modular IBAD apparatus for continuous coating.—73-01870
Multilayer metal-coated diamond abrasives with an electrolessly deposited metal layer.—73-00003
Nanoindentation studies of thin-film-coated systems.—73-12838
New container coating technology is developed.—73-10569
New electroconductive ceramic powders.—73-14721
Nonoxide ceramic particles coated with zirconium oxide or hydrous oxide.—73-05322
Nonspecular reflector with diffusely reflecting superconductor and protection coating.—73-11982
Optical properties and equilibrium temperatures of titanium-nitride- and graphite-coated Langmuir probes for space application.—73-10259
Optical transmission spectra of doped $Bi_{12}TiO_{20}$ photorefractive crystals with antireflection coatings.—73-16560
Optimizing plasma-sprayed alumina titania coatings using statistical methods.—73-09228
Overcoating inorganic composition.—73-05236
Oxidation of $CrN_x$ hard coatings reactively sputtered at low temperature.—73-00255
Pack mixture composition for SiC pack cementation coating of carbonaceous substrates.—73-12504
Particle coating of silica fibers by aerosol and sol-gel processes.—73-09232
Passivating coating for metal oxide varistors.—73-11041
Performance of a copper-based composite coating for steel casting applications.—73-06837
Phosphate coating composition and method of applying a zinc-nickel-manganese phosphate coating.—73-00290
Phosphate coatings for metal surfaces.—73-00291
Plasma coating made from zirconium dioxide powder produced by the sol-gel technique.—73-02923
Plasma coatings of FeMoCrNiB alloy with amorphized structure.—73-09499
Plasma diagnostics of rf discharges used for the deposition of hydrogenated amorphous carbon coatings.—73-09242
Plasma spraying ceramics onto smooth metallic substrates.—73-06838
Plasma spraying of glass–polyamide composite coatings.—73-06839
Plasma-assisted deposition process for producing a thin layer on a substrate.—73-12091
Plasma-enhanced chemical vapor deposition process for producing an amorphous semiconductive surface coating.—73-01382
Plasma-sprayed $B_4C$ coatings in controlled fusion reactors.—73-09246
Plasma-sprayed $B_4C$ coatings in controlled fusion reactors.—73-13879
Plasma-sprayed ceramic thermal barrier coating for NiAl-based intermetallic alloys.—73-10335
Plasma-sprayed hydroxyapatite coatings for enhanced biocompatibility.—73-13880
Platinum coatings and glass industry.—73-14459
Powder feed composition for forming a refraction oxide coating, process used and article so produced.—73-10337
Powertrain component with adherent film having a graded composition.—73-03700
Preceramic composition and ceramic product.—73-05237
Preceramic composition and ceramic product.—73-05238
Prediction model to assist plasma and HVOF spraying.—73-16904
Preparation and characterization of coated SiC whiskers.—73-09249
Preparation of alumina-hydrate-coated SiC whiskers—effect of reaction condition on the morphology of coated body.—73-09256
Preparation of CdS-doped $SiO_2$ glass coating films by the sol-gel method.—73-14475
Preparation of ceramic-metal coatings.—73-13921
Preparation, properties, and chemistry of glass– and glass-ceramic–to–metal seals and coatings.—73-06842
Principles of development of protective coatings on refractories.—73-00842
Process for applying nitride layers to titanium.—73-10339
Process for forming a crack-free boron nitride coating on a carbon structure.—73-12509
Process for forming protective base coatings on metals.—73-00295
Process for producing a curved glass plate partially coated with a ceramic.—73-00757
Processing and investigation of tauboride-containing NiCrBTi-TiC plasma coatings.—73-10266
Processing effects on chemically vapor deposited SiC coatings on silicon carbide fibers.—73-13218
Processing variables in laser glazing plasma-sprayed thermal barrier coatings.—73-09282
Production of a hermetically coated optical fiber.—73-00759
Properties of alumina-based coatings deposited by plasma and high-velocity combustion processes.—73-09502
Properties of TiN, ZrN, and ZrTiN coatings prepared by cathodic arc evaporation.—73-09503
Property improvement of silicate ceramics by coating the structural grain with a matrix paste in a fluidized bed granulator.—73-10756
Protective coating for ceramic materials.—73-12400
Protective coating for nonoxide sintered fibers generated by in situ chemical reaction.—73-05333
Protective coats for high-temperature strain gages.—73-13888
Quantitative determination of through-coating porosity in thin ceramic physically vapor-deposited coatings.—73-06273
Quo vadis, thermal spray technology.—73-01825
Radio-frequency-sputtered cobalt oxide coating: structural, optical, and electrochemical characterization.—73-12874
Recording penetrative defects in glass enamel coatings.—73-00263
Refractories for use in firing ceramics.—73-00890
Refractory carbide coatings on carbon synthesized by fused slurry process.—73-06018
Refractory overcoat for semiconductor devices.—73-04531
Residual stress in thermally sprayed coatings.—73-09664
Review of 2-coat, single-fire porcelain enameling systems.—73-10273
Review of multicomponent and multilayer coatings for tribological applications.—73-08540
Silicon carbide filaments bearing a carbon layer and a titanium carbide or titanium boride layer.—73-02136
Silver chemical coating on ceramics.—73-00266
Silver coating on carbon and SiC fibers.—73-10275
$SiO_2$-based vitreous coatings obtained by sol-gel method.—73-10601
Sol-gel coating products.—73-14494
Sol-gel method for preparation of specific properties of coatings on alumina alloys with anodic oxidation.—73-03887
Sol-gel preparation of silica or silicate-$Me_xO_y$ coatings on metal substrates.—73-13899
Sol-gel processing of titanium-containing thin coatings: I, Preparation and structure.—73-03022
Sol-gel-derived AgCl photochromic coating on glasses.—73-14498
Stability of cermet coatings and their dependence on the distribution of elements.—73-00267
Static fatigue of metal-coated fibers.—73-14279
Strengthening coating for desks of silica alumina magnesia.—73-10772
Strengthening of soda-lime-silica glass by sol-gel- and melt-derived coatings.—73-00707
Stresses in multilayer combinations of sputter-deposited coatings of Ni, Ti, TiC+Ni, and $TiB_2$+Ni on coated carbon steel substrates.—73-00269
Structural change in plasma-sprayed alumina coating by laser melting: II, On pulsed mode treatment.—73-17011
Structural change in plasma-sprayed alumina coatings by laser melting: I, On continuous wave mode treatment.—73-05490
Structural changes of sol-gel-derived $TiO_2$-$SiO_2$ coatings in an environment of high temperature and high humidity.—73-00407
Structure and corrosion properties of PVD coatings in the system Si-Al-O-N.—73-06320
Structure and forming processes of coatings based on the oxides of iridium, titanium, and tin.—73-16330
Structure and mechanical properties of coatings produced by dynamic ion mixing.—73-17437
Structure and properties correlation dependence of titanium and silicon coatings obtained by sol-gel processing.—73-14103
Structure and properties of plasma-sprayed alumina coatings[—literature review].—73-02693
Structure of calcareous gunite coatings of the converter linings.—73-00872
Structure, mechanical properties, and oxidation behavior of nanolayered $MoSi_2$/SiC coatings.—73-06534
Substoichiometric zirconium nitride coating.—73-02141
Surface topography of polished and oxide-coated BK-7 glasses investigated by atomic force microscopy [AFM].—73-07081
Surface-coated cermet blade member.—73-10353
Synthesis and tribological properties of carbon nitride as a novel superhard coating and solid lubricant.—73-09683
Synthesis of functionally gradient NiCr-Al/MgO-$ZrO_2$ coatings by plasma spray technique.—73-06861
Taguchi design of experiment study of plasma-sprayed alumina coatings.—73-09368
Teer Coatings Ltd.: setting the new standards.—73-17508
Tensiometry and Auger electron spectroscopy studies of the surface of plasma-deposited silicon carbide coatings.—73-13460
Textured coatings from colloidal suspensions of faceted oxide microcrystals.—73-06112
Theory of dielectric interference coatings.—73-01038
Thermal barrier coating for metallic components.—73-00298
Thermal expansion of metallic and cermet coatings.—73-08987
Thermal stability of amorphous SiC fiber coated with oxide film.—73-17056
Thermally protective composite ceramic-metal coatings for high-temperature use.—73-10354
Thick coatings of doped synthetic silica glass by plasma impulse CVD.—73-00713
Thick sol-gel coating preparation by generation in situ metallic particles.—73-14521
Titanium and tantalum coatings on aluminum nitride.—73-10289
Transmission electron microscopy analysis of a $TiN_x$ substoichiometric CVD coating.—73-13461
Tribochemical aspects of producing binders for refractory coatings.—73-00881
Tribological investigation of physical vapor deposition TiN coatings paired with surface-treated steels for machine element applications.—73-06868
Tribological performance investigation of steels after various surface treatments, solid lubricant deposition and ceramic coatings.—73-13904
Ultrathin zircon coating and membrane.—73-12407
Versatile, cost-effective, strongly adherent, highly stable, wear-resistant coatings.—73-15975
Water jet coating removal applications: aircraft engines and beyond.—73-08370
Wear behavior of titanium coating combinations at elevated temperatures.—73-06875
Wear characterization and practical applications of thermal spray coatings in drilling applications.—73-06876
Wear-corrosion-resistant materials for mechanical components in harsh environments.—73-06878
Wear-resistant [BN] coating films and their coated articles.—73-16023
Wear-resistant coating for fuel cladding.—73-05249
X-ray microstructural analysis of thin polycrystalline coatings with $YBa_2Cu_3O_{7-x}$ coatings as example.—73-09521
X-ray residual stress analysis of a ceramic thermal barrier coating undergoing thermal cycling.—73-13610
Zirconia sol coating of single-crystal ceramic fibers.—73-09387

**cobalt oxide,**
Anomalously enhanced satellite in metastable atom electron spectrum of $LaCoO_3$.—73-12536
Change in pigment color in the system CoO-$Cr_2O_3$-$Al_2O_3$.—73-00899
CO adsorption at 77 K on CoO/MgO and NiO/MgO solid solutions: an FTIR study.—73-02164
CoO-NiO superlattices: interlayer interactions and exchange anisotropy with $Ni_{81}Fe_{19}$.—73-04595
Dependence of magnetic properties of $(Co,Fe)_3O_4$ film on microstructure control through phase separation.—73-11650
Effect of cobalt oxide base coats on the process parameters of direct-on porcelain enameling.—73-10220
Electrical switching of two-phase ZnO-$PrCoO_3$ threshold switching materials.—73-03140
Electrochemical and in situ X-ray diffraction studies of lithium intercalation in $Li_xCoO_2$.—73-02251
Formation of $LaCoO_3$ highly dispersed on $ZrO_2$.—73-16790
Influence of constituent metal cations in substituted $LaCoO_3$ on mixed conductivity and oxygen permeability.—73-04115
Influence of grain size and secondary phase on the fracture toughness of sintered MgO bodies: III, Addition of CoO.—73-17358
Junctions of Pr-Co-O thin films and semiconductive $BaTiO_3$ and their electrical properties.—73-15004
Magnetic specific heat and critical magnetic susceptibility of the diluted antiferromagnet $Co_pMg_{1-p}O$.—73-04625
Microstructure evolution in sintered CoO under electric fields.—73-13429
Phase transition from antiferromagnetic [AF] insulator to ferromagnetic metal in $La_{2-x}Sr_xCoO_4$—magnetization and NMR studies.—73-08696
Preparation and characterization of dispersed cobalt oxide supported on γ-$Al_2O_3$.—73-02675
Preparation of cobalt oxide powders by emulsion evaporation technique.—73-13185

Preparation of spherical $LiCoO_2$ powders by the ultrasonic spray decomposition and its application to cathode active material in lithium secondary battery.—73-16937
